Remember that I am not talking about casual "asking for directions" or "traffic jam" queries. I mean those that everyone on the repeater knows are people who are engaged in conversation about such things only because they are on their way to work and need the best/quickest way to get there.

As to "and so does the majority of repeater users" that doesn't work for me.

The thing I'm wondering about is why you and others are getting so worked up over this. I hold myself only to this ideal...save that we bust peoples' asses if traffic and weather is all they can find to talk about on our repeater. (That's just more of a clannish thing than anything else). Aren't I allowed to say what types of conversations I will or will not get involved with.

We each interpret the R&R. It is only when we land ourselves in front of the FCC that what *we* think about the R&R gets tested. I'd rather not be tested.

Well, disagreeing is one thing...but it really does seem to me that you've been offended by what I think. I also don't test the water with most constitutional laws, tax laws, etc. I let that be done by others...and they are certainly welcome to do so. In some cases, I may be prone to thinking that they are foolish. In some cases they may be thinking that I am the one being foolish. HOWEVER, I say this: in both cases, which fool holds greater liability? Eh?

Joe Walsh is regularly and routinely on one of the, I believe, early morning AM HF nets. Would any of you like me to find out which one it is and you can pose your question to him of why he hasn't lived up to his responsibility as a famous person to promote the ARS?

This isn't directed at you, Joe, by the way. It's just the first post I've come across this evening on this thread.

Long, long asleep by that time, Joe...at least most evenings. And, I've had my share of traffic nets! LOL I did that as a new ham a long time ago, including MARS. It's gotten pretty darned boring with nothing more than the perfunctory messages (routine reports, the occasional Handy Hams message, etc.) Sure, great practice, and great for new hams and those for whom traffic nets are a passion.

Hmmmm, you must not listen to AM. I don't know what stations you refer to
above, but--for instance--KRLD gives traffic and weather together on the
8's: XX:08, XX:18, XX:28, etc. That works out to about every ten minutes.
It's my understanding that most other AM stations are doing the same thing.

Brian:

More realistically (as opposed to your inane attempts at castigating Dick and I for offering valid reasons for knowing the code), there are many possible "emergency" situations where Morse/CW may, indeed be the "best" mode to choose at the time…for a variety of reasons. If there are not any radio amateurs who know how to use the mode, then that particular emergency communications incident will result in failure, with possibly adverse consequences to life and property. When we get to the point where nobody is learning the Morse code due to a lack of a license testing requirement, then we have lost a valuable emergency communications capability. Of course, I guess you would call that progress, wouldn't you, Brian?

Brian:

Morse/CW is a mode not normally used to pass highway traffic
reports on VHF/UHF repeaters. I'm surprised you don't realize that
fact. I always believe in using the appropriate mode for the particular
application being pursued at the moment. However, if you want to
beep away in your local repeater during rush-hour traffic, go ahead
and knock yourself right flat out!

>Cheers,
>Bill K2UNK

Bill:

Ok, then, I'll lead off. In 1993, the ARRL Board of Directors passed
a resolution to support code testing in future administrative proceedings
relating to amateur licensing requirements. Almost from the minute
that resolution had been passed, ARRL officials began to contradict
it, in some cases even making the same statements NCI has been
making, such as "the future is digital," etc. When I raised this issue
at the ARRL Maryland State Convention several years ago, the
ARRL officials present permitted some hyper-emotional YL No-Code
Tech to shout me down before I could even complete a sentence.
There was no discussion, no debate, not even a thorough two-way
exchange. I mentioned support for code testing, and the representative
of the NCTA side was permitted to run roughshod over me, with no
attempt made by the ARRL Forum Leaders to restore order to the
proceedings or facilitate an exchange where at least both sides got
an opportunity to express their thoughts on the matter. The NCTA
side was supported, the PCTA side was thrown to the dogs. The
ARRL officials present were Kay Craigie, WT3P, and Hugh Turnbull,
W3ABC. I've never forgotten that incident, and it has affected my
opinion of the ARRL ever since. They clearly showed exactly what they
thought of the opinions of those that supported code testing -- and that
was that they were not listening to members who supported it.

Dick or Val, you're next.

Larry has every right to believe that my callsign "cheapens" ham radio--I think though that his diatribe goes well beyond logical and something to the point of my callsign bringing the ARS one step closer to extinction.

Point being, Larry has every right to believe that and I believe he's an idiot for it. I have every right to believe what I believe and not everyone needs to agree with it.

And, really, neither do I care what people talk about, *except* we regulars on our repeater would rather not have it become one of the soup in the metroplex wherein the conversation is pretty much all about traffic. We talk about gardening, home remodeling projects, jokes, trips, politics, religions, humanities...all kinds of stuff, on our repeater. Ever see a good conversation get totally killed with some nitwit coming in and saying "'scuse me everyone, just wanted anyone who's traveling on XXX highway to know that it is totally backed up." Well, DUH...it's rush hour in the DFW Metroplex. Plus the rest of the conversation never gets finished because all the lurkers are suddenly keying up with "Where was that?" Oy ve...

My observation of the ARRL is much less specific in that instead of
being the wind, they merely bend before the slightest breeze. Examples
are abundant, and anyone who hasn't observed them wasn't pauingm
attention then and won't believe anything they're told now.

Now THAT is COOL!

Before I moved to my current QTH back in late 1999, I had a commute that could
take anywhere from 20 minutes to over an hour, depending on traffic. One of the
local repeaters hosted an informal drivetime net. Saved many of us lots of
time, fuel and grief.

>Bottom line of that scenario is individual training on net
>operations which benefits all of us in the eventual case
>of an emergency net operation being needed.

And that's a GOOD thing.

Yup - and in bad weather they could not fly.

>We'd get much more detailed info from other hams about

Same thing here in Delco. Plus we had conversations on other topics as
well. End result was a lot better commute experience.

I love the formal net/training exercise idea.

You'll get a little respite for a while Hans, the returning snowbirds will clog the hiways soon. Even a Texan fears being behind Elmer and Esmerelda in their monster vehicles at 35 mph in the construction zones.

Cecil:

Getting my Ph. D. would cost me tens of thousands of dollars,
and require at least five more years of full-time study. Upgrading
from Tech Plus to Extra is something Kim could do in a matter
of weeks or months, at a very small cost. Someday, my
situation may change, and I may pursue a doctorate. But Kim
can upgrade her ham ticket at any time. The fact that she doesn't
want to is more of an indication of poor motivation on her part. It
is available to her virtually for the taking -- she simply can't be
bothered to reach. There is no similarity in the cost/benefit
analysis between her Extra and my Ph. D. She would get way
more "bang for the buck," comparatively speaking, than I ever could.

Thank you, thank you very much! I know for a fact that the people whose lives I take into my hands on a daily basis feel the same way -- because they've
told me so! And I feel the same way toward people who do the cooking, cleaning, garbage collecting, street sweeping, day care, policing, shelf stocking, cashiering, oil changing, check cashing, and just about every other routine task I depend on them to do for me -- with the notable exception of telemarketers! THEY can all take a walk -- back to the employment office to get a REAL job, like one of the others mentioned above!

> But the attitude of some here is hard to get happy about. One problem
>with so many here in the US anymore is that a fair number of people have

Well, perhaps to everyone but Lennie!

> Interestingly, those who don't share this belief, and like to rank jobs
>for their level in the food chain, seem to inevitably have the "proper
>job" cutoff point somewhere below their own vocation. 8^)

Throughout my Air Force career, I've held supervisory and management positions which, in civilian life, would have paid many times what I earned while serving my country. I put up with the stress of mission accomplishment, dealing with great complexity, a fast-changing environment, the constant need to deal with "superiors" who were technically incompetent, and, in most cases, needlessly limited resources. Now, like a great many military retirees, I am grateful to have a job where I can concentrate on doing something as well as it can be done, being responsible only for myself and my immediate customers. I also get great satisfaction in providing a necessary service for people who are totally dependent on me to get them where they need to go in order to have a fuller life than they could on their own. If Len Anderson wants to denigrate me for being a college graduate BUS DRIVER, let him. He's only demonstrating his ignorance, and providing another source of amusement for me!

Well, for now at least, it's not something that happens very often.
My daily schedule has me travelling to all corners of a very large
county; and our repeaters don't have enough range to give me
HT coverage. That will be fixed, someday -- and I imagine I'd be
very well able to use ham radio to enhance the efficiency of my
operation, in a perfectly safe and legal manner. Using my HT is
no more distracting than using my company 2-way radio with it's
CAD/AVL system while driving.

Bob:

When it's done on a wide-area coverage repeater, occurs on a daily
basis, and goes on for hours on end, it definitely becomes a "gray" area --
from a standpoint of "good amateur practice." I have monitored such
long-winded health-related diatribes among old-timers, who don't know
the difference between a repeater and their nightly 75-meter roundtable,
while other stations have tried desperately to break-in for a chance to
make a call of a more urgent nature. The Geezer Factor in ham radio
is something that must be reckoned with, particularly in larger urban
areas with a dense population of hams.

Absolutely correct, Sean.

>In the second case, I can see that as less gray -- that seems akin to
>setting up a work appointment using ham radio, which isn't gray at all,
>it's simply not allowed.

Incorrect, Sean. If my accountant, also a licensed radio amateur, is
travelling to my residence to do my taxes, and I give him or her
directions using the local repeater, then this is perfectly allowed, as
long as we do not discuss relevant details of what I want him or her
to do during the QSO. All I'm doing is giving routine directions to
another licensed ham. Perfectly legal, without a hint of "gray."

>I don't see a problem with talking about travel conditions on your route
>to work. It certainly doesn't enhance my ability to make money -- I'm
>not paid hourly.

It wouldn't make any difference if you were hourly or salaried. All
you're doing is getting routine driving directions in a perfectly legal
manner, in accordance with Part 97.

>On another, somewhat related note (at least I think it was in this thread)
>you said something about how people discussing medical conditions *cheapens*
>amateur radio. That's sounds amazingly like what Larry says about your
>callsign. I don't agree with either one of you.

Your agreement isn't required in this case. The negative effect of Kim's call sign has been spelled out quite clearly by a high-ranking FCC enforcement officer. He said it has the potential to take the ARS "…one step closer to extinction" -- and there's nothing "gray" about that, either!

>I think listeners have
>to understand that amateur radio is a way for people to talk. We have some
>restrictions on what we're supposed to discuss and how we use our
>frequencies,
>but still, most people just use it to talk. I don't care what people talk
>about as long as its within the guidelines.

Those guidelines are quite clear. We can use ham radio to order a pizza, but we can't use it to sell a pizza. The fact that the person at Domino's who answers the phone when you place the autopatch call is "selling" pizza doesn't constitute use of amateur radio to deliberately advertise and market his product. If the amateur him/herself is in the role of a "customer," then his/her use of ham radio to avail him/herself of such goods and services is perfectly OK. In the case of my accountant getting directions, there is no issue, since the professional details of the visit would not enter into the content of the conversation.

> 73 de Larry, K3LT

Let's be careful as to how strong that NO is.

If the ONLY people knowledgeable as to the coding
or encryption technique or encryption scheme is a
limited (i.e. non-pulic, unpublished set) of people
or hams, then Larry is correct. IF, on the other hand,
a public, common or published scheme is used which
others can freely "decode/decrypt", then it is OK.

I think that covers it. By example, PSK31, ASCII,
EBCDIC are some common coding techniques for
character encoding/decoding.

Cheers,
Bill K2UNK

Bill:

I took the question to mean should the actual message *content*
be encrypted -- in order to actually obscure or conceal it from all
but whomever is equipped with the decryption "key." "Coding" such
as PSK31, ASCII, EBCDIC is merely a way of transmitting perfectly
in-the-clear messages, since, as you point out, everyone has the
ability to "decode" messages transmitted using said codes. Therefore,
I'd submit that we would have to always be sure to clarify the
difference between "coding" and "encryption." The first doesn't
necessarily mean we're keeping something secret; the second does.

Hansl:

Actually, it is! We went from a clear superior licensing system, with reasonable, applicable, and highly achievable standards, to the dumbed-down standards of 90 years ago. Of all the incidents you relate on your timeline, Restructuring will go down in history as the greatest travesty ever visited on the Amateur Radio Service.

Bill, et al,

PSK31, etc. or other "encodings" are legal as long
as they are 1) "widely" published and 2) not used for the
pubpose of obscuring the meaning of a transmission
(many forms of encoding used to facilitate transmission
of data render the bits going by rather unreadable to the
casual "sniffer" ... but that is an unintended consequence,
not the purpose of the encoding.)

There is a difference between that sort of "encoding"
and "encryption," which IS intended to obscure the

meaning.

If I recall correctly, the only exception allowing encryption in amateur radio is on a limited basis for satellite command systems (harder to service than a regular repeaters site and wouldn't want someone messing with the attitude control systems and causing the bird to tumble, or worse yet, de-orbit ...)

>>stroke" is a common short-form descriptor used by doctors and
>>staff at two hospitals in this area.
>
> It's not "microstroke", Lennie. You weren't paying attention.

That's what MDs and licensed nurses (two in an ER) called it.

>>This isn't a medical newsgroup...it is about amateur radio.
>
> Then why'd you bring it up?

Oh? A casual mention of "TIA" and you suddenly think you
are a full professor at some School of Medicine?

>>Now, YOU break open a RADIO TEXT and LEARN.
>
> I do...a little bit, every day. I just don't have anything to prove by
>INSISTING that everyone pay homage to it like you do.

You "don't have anything to prove" because you've got a
"credential" you think makes you some kind of "expert"
in either medicine or radio?!? Merde, Docktor Killgore.

>>As I said before, this is an AMATEUR RADIO newsgroup.
>
> Then why are YOU trying to tell me (erroneously, I might add...) the
>pathology of a stroke in this same newsgroup, Lennie?

I never brought up "pathology of a stroke" in here.

Come back when you're able to actually design a radio or
even parts of a radio successfully, then we might have a
civil conversation. So far, you haven't shown you can go
beyond simple Ohm's Law.

>>I'm not a medical professional,...(SNIP)
>
> That's obvious.
>
>> I'm an electronic professional.
>

> That's debatable. So far you can't tell me which radio service is
>"strictly recreational", you YOU assert one exists.

I said "created as strictly recreational." That's what CB, FRS,
R/C in Part 95 are under the Part heading of "Personal Radio
Services."

>>In that case, it is four graduate, licensed Medical Doctors who are
>>"all wrong?" Three of them are still in practice in California, licensed

Why are you showing "compassion" in here, Gomer P? Your "job"
(self-described, self-appointed) is all about insulting old people,
right little monkey? If they don't agree with you, you clench your
little fists and dance all over shouting obscenities.

>But your "definitions" are not completely
>correct. In other words, you only did HALF your homework.

No, I did ALL the required homework. I took care of my mother
at home for over five years before she had to be hospitalized.
At the same time I had to earn income as a professional.

> Nope....YOU (an ALLEGED "radio professional") stated not once, but
>SEVERAL times that certain radio services existed for "strictly" recrational
>purposes.

Gomer, I'm getting tired of your "allegations." I've been a professional
according to two state governments, the federal government, the
IEEE, the ACM, DCAS, the FBI, and other assorted alphabet-soup
agencies. In radio-electronics since 1951. That's longer than you've
been alive.

Now you dance right over to some psychologic counseling and seek
a cure for your sociopathy, little monkey. Modern medicine has
relief for some psychoses, too.

OK, Pinnochio.

>Come back when you're able to actually design a radio or
>even parts of a radio successfully, then we might have a
>civil conversation. So far, you haven't shown you can go
>beyond simple Ohm's Law.

Another reminder, Lennie...It's Amateur Radio POLICY. I have already
"ceeded" to your knowledge of what goes on INSIDE the box, Lennie.

It's what happens TO the box or how it's used that you are grossly
ignorant of... (ie:..WHAT radio service is "strictly" recreational, Lennie?)

>I said "created as strictly recreational." That's what CB, FRS,
>R/C in Part 95 are under the Part heading of "Personal Radio
>Services."

Lennie, CITE THE FCC REGULATION that says that ANY of those services are
"strcitly" recreational...!!!!

Ignorance, Lennie! Anyone with a couple minutes of spare time can pull up
the regs on ANY of those services and dispell your untruth!

In no way, shape or form has the FCC created ANY radio servie for
"strictly" recreational purposes. Even Amateur Radio has it's "serious"
applications, which may or may NOT be considered recreational by the licensee
or the FCC.

>Go shove your sphygometer someplace and assemble a Fleet Kit,
>then turn it on and work some dee-ecks..

There is no such thing as a "sphygometer", Lennie. Perhaps you meant a
sphygmomanometer?

Again, Lennie, you are trying to deal with half-facts and demonstrate your
ignorance. Thanks for making my case for me.....

>Why are you showing "compassion" in here, Gomer P? Your "job"
>(self-described, self-appointed) is all about insulting old people,
>right little monkey? If they don't agree with you, you clench your

>little fists and dance all over shouting obscenities.

Hmmmm...."shove your sphygometer.."

"Gomer P"

"little monkey"

Lennie, you make one assertion and then show EVERYONE exactly WHO is the "lilttle monkey" and who has his fists clenched.

>No, I did ALL the required homework. I took care of my mother
>at home for over five years before she had to be hospitalized.
>At the same time I had to earn income as a professional.

Congratulations. I wish more families would do that. She probably lived a longer, healthier, more satisfying life until she succumbed to the disease process.

>Gomer, I'm getting tired of your "allegations."

Shaking of fist noted.

>I've been a professional
>according to two state governments, the federal government, the
>IEEE, the ACM, DCAS, the FBI, and other assorted alphabet-soup
>agencies. In radio-electronics since 1951. That's longer than you've
>been alive.

Then (A) GET YOUR FACTS ABOUT RADIO SERVICES CORRECT,

And (b)...ACT like a professional. Your propensity to call names, use improper terminology and frequently analogize the Third Reich to those who don't agree with you are embarrasssing.

>Now you dance right over to some psychologic counseling and seek
>a cure for your sociopathy, little monkey. Modern medicine has
>relief for some psychoses, too.

I'm not the one hounding the newsgroup of a group of radio users of a service for which I am not currently licensed, participate in, nor have expressed an arrogant disdain for, Lennie.

Perhaps Mrs Lennie would lead if you asked HER to dance?

OK, that's 1 (one) complaint. Dick, Val, Ryan seemed to suggest many
complaints/actions that dissatisfied a majority of ARRL membership.

Assuming your description is accuate, I'd agree it was a pretty shoddy
way to have handled the situation. Shouting down or just plain

unequal treatment is something I totally disagree with, regardless
of my stand on any particular issue. Indeed, I would go further
to say that those that want or tolerate such behavior really don't want
any dialog which may challenge their ideas or agenda in the first
place.

Cheers,

Well Dick, Larry DID provide one example.
You, on the other hand, still resort to
generalities to make your case. Sorry,
that's a no win in the courts of public debate
and discussion.

As to not believing what might be told, that's
bunk. I took Larry's incident description at
its face value and I agree with Larry that if that is
what happened, then that is wrong. Can I state
with any certainty that it happened exactly
the way Larry said it did? No I can't, but neither
can I say that it did.

Cheers,

Which is also a crock. Do you consider it a "pecuniary" interest if
I use the repeater's autopatch to order a pizza on my way home so it
is ready for me when I get there? The FCC did say a few years ago

such things were not a violation.

> It is my nature, Bill, to

Which, between 6am and 9am typically is everyone on a repeater.

> As to "and so does the majority of repeater users" that
> doesn't work for me.

The point is that the practice is widespread and, if it was in
violation would likly have encountered the rath of the FCC
already. We're talking a decade or more of active repeater
use.

> The thing I'm wondering about is why you and others are getting so
> worked up over this.

Not worked up at all. Just open and friendly debate. You through
down the gauntlet when you made the statements you did which
are totally contrary to practice on just about every repeater anywhere...
other than the one you mention.

> I hold myself only to this ideal...

No, you said they are the rules of the repeater you
use all (most?) of the time.

> ...save that we bust peoples'
> asses if traffic and weather is all they can find to talk about on our
> repeater.

Why? If no one else is using the repeater, why bust anyone's
ass as to their discussing weather or traffic?

> (That's just more of a clannish thing than anything else).

?????

> Aren't I allowed to say what types of conversations I will or will not get
> involved with.

Ansolutely...you need not participate in any discussion... BUT,
you didn't say it was ONLY for you...rather you stated it was
the repeater rules themselves.

> We each interpret the R&R. It is only when we land
> ourselves in front of the FCC that what *we* think about

greater
> liability? Eh?

The history of the world is filled with people who challenged the rules.
Not everyone wins, but we'd be no where as developed if people didn't
challenge rules on occasion. In this instant case, you can do what
wou wish, others (the vast majority of repeater users) have been
making that challenge for years and helping other hams with
traffic conditions, route instructions, etc with NO ill effects from
the FCC.

As to the legitamate use of ham radio for traffic condidtions,
it seems we DO have FCC thinking on this. The FCC busted a ham
for getting traffic conditions for (on behlf of) his employer,
a broadcast station. The FCC did not then state that
any/all traffic condition reporting among hams is or should
be a forbidden topic. It was ONLY the ham that was doing
the soliciting of traffic data for direct use by the broadcast
station that got in trouble. If the other hams were in some
way guilty of violating the "pecuniary" use rules (even if
the FCC viewed them as unintended participants) because
the sukect (traffic conditions) is verbotin, then why didn't
the FCC so state that?

Cheers,
Bill K2UNK

Agree completely.

> Upgrading
> from Tech Plus to Extra is something Kim could do in a matter
> of weeks or months, at a very small cost.

That depends on what YOU consider "a very small cost."

> Someday, my
> situation may change, and I may pursue a doctorate.

Exactly, a matter strictly of personal choice governed by
whatever metrics applies in your life (e.g. time, money,
value, need, etc.)

> But Kim can upgrade her ham ticket at any time.

Not at all. The same factors, however smaller in size, scope
or impact determines why anyone does anything.

> The fact that she doesn't
> want to is more of an indication of poor motivation on her part. It
> is available to her virtually for the taking -- she simply can't be
> bothered to reach.

That is as YOU see things through YOUR eyes...applying
your personal metrics to it. You have no knowledge of
why anyone else decides to do or not do something (e.g.
upgrade) unless they specifically tell you.

> There is no similarity in the cost/benefit
> analysis between her Extra and my Ph. D.

The similarity is absolute. The differences are
simply the indivdiual metrics as stated above.

> She would get way more "bang for the buck,"
> comparatively speaking, than I ever could.

Again, that is YOUR opinion only based on how you see
the value, use and need for an Extra. In the last 12 months,
NOTHING I have done as a ham, except for serving as a VE
at a hamfest, has required Extra privileges. The value of the
Extra to me is simply that I can if I want to. Others, such as
Kim, may hae NO desire to ever operate HF at all...there's
nothing wrong with that...and it in no way indicates any
inherent lack of motivation.

Cheers,
Bill K2UNK

> I don't recall ever claiming that it was. However, it is the avoidance
> of this effort which is the underlying motivation of the NCTA. Of
> course, they cannot, and will not, admit this.

Larry,
Let me give you a partial agreement. It is the avoidence of effort
to accomplish a skill which can NOT be justified as a requirement
that NCTA opposes. Clearly, if testing for CW ends, then an
individual won't need to expend the time/effort to learn morse...unless
that person wants to do so voluntarily.

Generically, I oppose any requirements which can not be
rationally defended as being needed. That's true for just
about everything in life as I see it. All my kids learned
to drive standard shift vehicles...not because they just
wanted to, they did so because if they didn't they wouldn't
be able to drive at all since every car we own is manual.

There will be those hams that come to ham radio and discover
there are other hams out there that only use morse code.
Some of those new hams will learn code to talk to
them. Of that I am certain. You, Larry, can be a
champion for the mode...or you can bemoan the lack
of code testing and convince no one of its value as
you see that value. The choice is yours.

Cheers,
Bill K2UNK

Such behavior would, I must agree with Larry, be truly
horrible amateur practice. If the users of a repeater
don't willingly allow others to intervene in its use,
then somethings rotten. Does the repeater owner
just tolerate such poor behavior?

> The Geezer Factor in ham radio
> is something that must be reckoned with,
> particularly in larger urban
> areas with a dense population of hams.

Sad, but probably true to some extent. The self
policing of repeater use, such as being sure everyone
willingly lets other use it if the only QSO going
on is routine chit-chat, takes an across the board
dicipline and should involve all hams that are
active users.

I don't understand, Kim.

You wrote:

"I've done all bands in the presence of control ops, lots of times."

The context was HF bands, of course. 30 meters is an HF band.
What mode did you use on 30 meters?

It's a simple question.

What I said was in the context of someone who already knows the material.
If someone already knows the material, there is no need to work and no
requirement for additional work just for work's sake. The FCC is interested
in knowledge, not work.

Cecil is correct and I'll say the
following once again....

The aspect of "work" is not and should not be any
consideration as to the rational behind any specific ham
license requirement. We all know that for most people,
work (effort) will need to be expended to achieve
or pass a particular license requirement...BUT, that
having been said, the NEED or DESIRE to try and
make "work" be an aspect of licensing is, again, not
a factor nor should it be.

Cheers,

Would that be anything like gathering weather reports for one's employer? I frequently hear TV weather jocks referring to the amatuer radio reports they've received. OK, technically (perhaps) filtered through the NWS, but ultimately they get credited on commercial broadcasts.

Sounds kinda "grey".

>Nice try at obfuscation, Jim.

Not at all. How about listing some other causes?

>The 4% growth was not the only growth caused
>by the addition of the Tech license.

I didn't say it was. I said the rules changes (code waivers and dropping the code test) resulted in 4% more growth.

>By your own posted figures, the Techs
>were responsible for about 41% of the growth.

There you go again. 41% of 34% is 13.94%.

>The coded hams were responsible for a decline of 7%.

Only if it is ASSUMED that all Techs are "noncoded", to use your term. That is not a valid
assumption. If only a small percentage of Techs are "coded", the picture changes radically.
>
>> What other causes am I ignoring?
>
>Whatever caused the decline in code tested hams.

Your list, please?

>I don't know what that was

Ah - you don't know what other causes existed but you're sure they exist and had a much bigger effect than the known causes. And we're supposed to accept that on faith. Give us an ever-loving break!

>but it's obvious to the most casual observer that something drastic happened.

Not at all.

Here are some considerations:

1) Not all Technicians are "noncoded", but you insist on counting all of them that way. (Can you spell "agenda"? I knew that you could)

2) From 1989 to 1994, no US ham licenses expired at all. But after that date all classes except post-Feb 14 1991 Techs were expiring at their natural rate. Thus the number of "coded" hams could decrease from expirations during 1994-2000, but not the number of post-Feb 14 1991 Techs, whose licenses would not begin to expire until 2001.

3) FCC did not differentiate Techs from Tech Pluses in its records until 1994. (See any Callbook of the era for confirmation). Even after the changeover in 1994, they renewed an unknown number of Tech Pluses as Techs. A Tech Plus who renewed and got a Tech license had to send a letter and supporting documents to the FCC to get a licnese that said "Tech Plus" How many bothered? I don;t know, and neither do you.

4) FCC has been renewing Tech Pluses as Techs since restructuring. By AH0A, 4553 Tech Pluses were renewed as Techs in 2000 alone.

5) Any Tech who passed Element 1 after restructuring gets a CSCE and no change in the FCC database.

>> All hams codetested and no waivers: 30% growth in 10 years
>> Some hams codetested and waivers: 34% growth in 10 years
>>
>> Difference: 4%
>

>Nice try at obfuscation, Jim.

Where have I denigrated any class of license? Produce the post instead of
endlessly gassing about untruths.

>It is readily apparent that you want to ignore
>the contribution of the Techs to the ham population.

Only to you.

>Take away the
>Techs and the ARS population would be in decline.

Only if none of them got any other license. Which you take as a given, but
which is not true at all.
>
>> So tell us what those other causes of growth were....
>
>The Techs were responsible for about 41% of the growth.

41% of 34% is 13.94%. Where do you get that number?

>The code tested hams
>were responsible for a 7% decline according to your posted figures.

Nope.

The reduction in the number of non-Techs is caused by hams who did not
renew their licenses, or had them cancelled.

Try posting some accurate facts if you want people to take you seriously. On
the
other hand, since you don;t post accurate facts, we must logically
conclude.....

Out here during tornado season you often hear the commercial
guys attribute a Skywarn report to it's source (amateur, LEO, or
whatever). It's certainly legal for amateurs to provide "safety of
life and property" traffic to news broadcasters in accordance with
the exception granted in 97.113(b).

Nothing grey about that.

So to say I "brought about" the mowing of my lawn doesn't mean that I
"was the cause of" my lawn getting mowed? Are you playing word games?

> 34 - 30 = 4, Cecil.

You forgot the smiley face, Jim. That figure is irrelevant to the discussion
except to add to the 37% increase in the ham population caused by the Techs.

> >The 4% growth was not the only growth caused
> >by the addition of the Tech license.
>
> I didn't say it was. I said the rules changes (code waivers and dropping the
> code test) resulted in 4% more growth.

But that is false! Code waivers and dropping the code test were simply NOT
the cause of 4% more growth. You are ignoring hundreds of other causes and
effects. Why must you denigrate the contributions of the nocoders?

> >By your own posted figures, the Techs
> >were responsible for about 41% of the growth.
>
> There you go again. 41% of 34% is 13.94%.

What is it with the games, Jim. You are ordinarily a rational person. Why
do nocode techs illicit such an irrational emotional reaction from you?
The Techs were responsible for 41% of the growth in the ARS during the
90's. That means all the other classes of licenses were responsible for
a decline of 7%. Why do you refuse to recognize that fact?

> >The coded hams were responsible for a decline of 7%.
>
> Only if it is ASSUMED that all Techs are "noncoded", to use your term. That is
> not a valid assumption. If only a small percentage of Techs are "coded", the picture
> changes radically.

No it doesn't, Jim. The trend is there whether you like it or not. In your estimation,
what percentage of Techs are coded? If you like, change the discussion from nocoded/
coded to Techs/all-other-classes

> >> What other causes am I ignoring?
> >
> >Whatever caused the decline in code tested hams.
>
> Your list, please?

I don't have a list. That doesn't negate the fact that your jumping to
irrational conclusions is obviously erroneous. It doesn't take knowing
what is right to know that your list is wrong (extremely incomplete).

> >I don't know what that was
>
> Ah - you don't know what other causes existed but you're sure they exist and
> had a much bigger effect than the known causes. And we're supposed to
> accept that on faith. Give us an ever-loving break!

Your irrationality is obvious to the most casual observer. Based on *your* posted
numbers, the Tech license is responsible for 41% growth. All other license classes
are responsible for a 7% decline. That you seek to minimize the contribution of
the Techs by lumping them in with all other classes is comical. Sweep them under
the rug and they cease to exist, eh?

> 1) Not all Technicians are "noncoded", but you insist on counting all of them
> that way. (Can you spell "agenda"? I knew that you could)

What percentage of Techs are coded? If you cannot or will not answer that, you
are just blowing smoke.

> Where have I denigrated any class of license? Produce the post instead of
> endlessly gassing about untruths.

Your statement obviously denigrates the importance of the Tech license class.

> >Take away the
> >Techs and the ARS population would be in decline.
>
> Only if none of them got any other license. Which you take as a given, but
> which is not true at all.

If they would have gotten another kind of license, why didn't they? I was
a VEC during six years of that time, Jim. Many of the Techs I tested went
on to higher licenses. Why didn't they all do that?

> >The Techs were responsible for about 41% of the growth.
>
> 41% of 34% is 13.94%. Where do you get that number?

There you go again: Figures don't lie but liars figure. I'm using your figures,
Jim. How can you possibly deny your own posted figures? I have posted the
details two times now. When are you going to read my postings and stop asking
where I got my numbers?

> >The code tested hams
> >were responsible for a 7% decline according to your posted figures.
>

> Nope.
>
> The reduction in the number of non-Techs is caused by hams who did not
> renew their licenses, or had them cancelled.

That's exactly what I said, Jim. The code tested hams who didn't renew their licenses or had them canceled were responsible for a 7% decline according to *your* posted figures.

> Try posting some accurate facts if you want people to take you seriously.

I'm using your posted facts, Jim. Should we not take your posted facts seriously?

I notice that you didn't retract your statement and substitute Bill's with which you agreed 100%. One wonders why.

> Can you prove differently? I think not.

It doesn't matter, Jim. The onus of proof is upon the person who asserts the positive. That's you, my friend. Please *prove* that the effect of the rules changes was 4% more growth. You have offered no causal proof whatsoever so far. So let's forego the speculation and see some valid proof. There are many forces at work in the ARS besides rules changes. There was lots of growth besides the 4%. That you would assert that those two mostly unrelated facts were causal is beyond logic. If the change in growth had been zero, what would you be saying? That the rules changes had no effect at all? Get real.

What you have done is to assert something like the following: The rise in church membership is responsible for the rise in prison populations. Just because things are correlated doesn't mean they are causal. Is some proof of your assertions too much to ask?

Instead of trying to defend your illogical statement, why don't you just change it to agree with Bill's statement which allowed more forces to be in play than simply the rules changes. You said you agreed with Bill's statement 100%. Since Bill's statement expands on your illogical statement, it seems you would jumping at the chance to correct your faux pas.

Cecil knows there would be no ROI on that investment, but he reserves
that rule only for the code test.

Ed, you're either lying or blockedheaded. I have no intention to ever
again read everything Cecil says. If I ever even open one of his posts
it will be the accidental reault of clicking on the "next" message in
Netscape.
The fact that I read something he wrote that was quoted by another
poster that I do read is another matter. I
I'll reserve the right to comment on that if I wish.

Your record of accurate reading others posts here is not exactly
sterling, Ed. My interpretation of what he said is at least as likely to
be accurate as yours.

So try this one- why do you think that so small a percentage of US hams ever join ARRL? I really believe I know. And the answer wouldn't be complimentary.
It is simply that they don't believe the elitists who populate HQ care about members interests nearly as much as they do for their own.

Well Dick...that is just another generalization. Not a damn aspect of
anything specific. You state a "belief" as a generalization yet you
back it up with NO specifics once again.

Cheers,
Bill K2UNK

Okay, if "station" means the equipment and antenna setup, then
a ham licensed person would be the control op. But most of
us think of the license as associated with the person and not
the setup. And the FCC IIRC tends to think that way too.

The ARRL is an organization of lots of people. The leadership
should "bend" with the "wind" of the majority of its members.
It's a democracy type thing.

You have an operators license *_and_* a station license.
(They're on the same document.)

Your call sign is associated with your station license, not
your operator license.

Bending with the wind and merely before the slightest breeze are quite
different. Sometimes the slight breeze (few) trumps a heavy wind (the
majority)

Yup. Fortunately, we don't get too many W1GMF-grams on the late net
these days, but we're not getting a whole lot of anything. I need a
way to get people to show up, and a way to get them to bring something
when they do. Preferably not the generic welcome message type stuff,
since everbody feels a bit silly delivering those, but theoretically,
most of them should know someone, somewhere, that they'd like to send
the occasional short message to via NTS.

Anybody out there got ideas for promoting a local VHF NTS net?

Didn't the FCC stop issuing actual station licenses some
years back?

Also, even IF station liceses exist, isn't it correct that
the call sign need not be used by another person
operating my station. That other person can operate
my home station using their own call sign, making
no reference to my call sign, as long as the operation
by that person is within the privileges of that person's
license.

If the ham was working at the pizza place and you called, you'd both be in
that gray area. If your accountant is a ham and going to your house for the
purpose of providing you with a service for which he is going to charge,
you'd be in the gray area.

You aren't the one making money in that exchange, Bill. Unless the person
at the pizza place is a ham, I doubt there'd be a chance for much of an
issue.

They may be usual and customary. I choose not to be involved in the communication. It is also usual and customary to speed on the highway. I *do* choose to be involved with that. It is also usual and customary for hams to "admit" to breaking the law and bragging that they are speeding on the highway. I choose *not* to be involved with those communications.

> >
> > I hold myself only to this ideal...

You misinterpret what we have as common practice into a "rule." There are no "rules" on our repeater. Those of us who use it regularly don't care for weather and traffic reports. We tease those who do.

>

>
> Crystal ball???
>

C'mon Bill, it's pretty damned obvious when ham A works with ham B. Ham A is on the highway every morning (usually) before ham B. Ham B always asks ham A which route he should use. It's also pretty obvious that most of us in the local area who are all mobile on the same highways every morning are all going to work--especially when the conversation usualy entails the announcement of such.

Bill, some people are cut out for more challenge than others. I am willing to go to jail, say, overnight or for two or three days for something I believe in. I am not willing to lose my ham radio license, or be heard being involved in conversations of a questionable nature on ham radio by scanner listeners or the general public.

If you feel it is that OK to help each other get to work (where a pecuniary interest is involved, why do you say above that others "have been making that challenge for years"? WHAT challenge?

Like I said, I doubt this is something the FCC is really all that willing to get involved with. It's benign enough that, even if it is wrong and could be used in a court of law as being wrong, what is the real harm in it? I mean, after all, most of us know that there are a lot of abuses on ham radio that go virtually ignored.

Let me ask you a friendly question with a bit of a jab at the side to you, Bill. If the "users" of a particular repeater should be viewed as necessary to intervene in its use, then why wouldn't it be OK for us on our repeater to tease, cajole, or otherwise challenge the use of our repeater for traffic and weather? OH, wait...that may have been Hans that raised such a stink about regulars on a repeater being the ones to kind of "indicate" what types of communication we all prefer...

Never mind

Jim, I've given up on even trying to communicate with you, but I'll make an
exception to say that your "all" and my "all" are two different things.
There are some on this newsgroup who respect you immensely... then there is
me who thinks you're nothing more than an irritation who likes to bring
extreme definition into a topic--when it is one you tend to disagree with.
If it's something you agree with, you are quite liberal...

I wonder. Let me say that down here there's been a tendency to get every media outlet involved that can get involved so that no "preference" is implied. One of our local TV channels here used to have a "corner on the market" for ham radio when one of their primary weather people was the only media weather "voice" on the air. In fact, there are some stories of how any other media weren't given "right" to enter a RACES net. Now, the tides have turned and nearly all stations, TV *and* radio have hams--and all of them (that I know of) are allowed onto the RACES nets.

That aside, I am not sure there would be anything wrong with a media outlet using reports from ham radio. However, I believe that it is wrong for us to repeat the things we hear on local commercial media outlets and on public service frequencies. We can, however, retransmit items from the NWS, I think.

I would. Though I do not. I've cursed on the air. I don't do it often,
but I'll use the words "damn" "hell" "crap" and, you know, all those that
are commonly used to imply the same and worse.

Can't get out of it, Little Dick. The attributes of newsgroup readers
aren't that drastically different from one to the next. You *directly*
replied to a post from Cecil, everyone knows it, everyone saw it. Just as
now everyone is seeing you trying your darndest to get out of it.

You're just going to have to be entirely more careful when you tell people
that you've "filtered" them. You will have to spit shit until you *can*
respond to them via someone else's quote--which doesn't happen often enough
for you.

I think right now, the only person with whom you'd have disagreements is Ed,
as I don't believe you've made some kind of public announcement about
filtering him. So, the way I see it, we should begin to see either less
posts from you, or more positive ones.

I will use one of Bill S.'s terms here: What a crock. I'd *BET* (that's for
Jim/N2EY's benefit) that the greatest reason more people aren't members of
the ARRL are:

** Pure ignorance that the ARRL is there--I never heard of the ARRL until
about six months after I became a ham radio operator (in fact, it was my
first Field Day that I heard the initials A-R-R-L spoken)

** Competition with many other interests and ham radio as a secondary
hobby/interest under things like astronomy, hunting/fishing, travel, etc.
Ham radio--to most people I imagine--is quite secondary in their life

** Time. *If* QST is the motivator for membership, what a pity. Many of us
have precious little time to spend reading a magazine for other than a

casual look at the pictures. Most of us don't spend the time it takes to read anything any more

** Competition with club memberships. Most ham radio clubs are, at a minimum, $20-$25 annually. Several are much higher than that--and repeater link clubs are up in the $100+ range (at least around here) If I've got $50 a year to spend on ham "organization" stuff, I think I'm going to spend it locally for a club with people I can know and visit with, as opposed to an "organization" far far away and removed from anything I do with ham radio every day

** Complacency. I'd imagine that many, many hams are quite content to think that ham radio will always be around. I am admittedly complacent. The danger here is enhanced by the fact that many hams are more VHF/UHF users; where spectrum is viewed to be less threatened.

There's more reasons, none of which are conspiracy theories and, thereby, quite non-valid to people like Little Dick.

Oh yeah! That too. I used to have a great deal of disdain for the
distinction that most hams are "cheapskates" and are really looking for free
stuff. I've come to realize that, though...

And, so you think the ARRL should mind read the majority of the membership?
You're talking out your ass again, Dick. The ARRL doesn't KNOW what the
majority of its membership wants. The majority of the membership doesn't
tell them.

It is as it should be: those who take the time to communicate and activate
are those for whom the ARRL will spend the most time. The rest get their
QST.

Hey, Joe: I hate being an "armchair activist" but, here goes. I come from the days when, literally, 50-60 people showing up for a DFW traffic net was a light turnout. In those days, however, there were dinners, parties and lots of eyeball get togethers among net participants. Maybe a resurgence of those would get more people involved.

Sounds "cheap" but people thrive on getting together. Also, people thrive on feeling a part of something. I've always, always thought that every time Dallas RACES is up on 146.880, then the DFW traffic net should be up on 145.190. But, it's never happened. If you were up during a RACES net, the people who prefer traffic handling would be there (at least some) and would pique the interest maybe of those who don't want to storm spot but would love to be there for traffic handling--which can extend beyond a formal message to getting the police advised of a car wreck, a stranded motorist, etc.... How 'bout messages from storm spotters who know you're there, back to their family members who stay at home?

Is an all-band-antenna still an all-band-antenna if it's not used on all bands? :-)

You cannot possibly be that dense. Numbers are mere abstractions.

Last year, I made a profit trading stocks. I made 65 trades. The best
trade was equal to my profit. The next two best trades added together
equals my profit. Can I say?: I made all my profit on my best trade.
I made all my profit on my second and third best trades. Both those
statements cannot possibly be true. The truth is that 65 trades were
responsible for my profit.

Using your own figures, the Techs accounted for 41% growth in the ARS.
All other licenses combined accounted for a 7% decline. 41 - 7 = 34 QED

> > You have offered no causal proof whatsoever
> >so far. So let's forego the speculation and see some valid proof.
>
> "It's obviously true". You used those very words, so I can too.

Not when you are the one who asserts the positive proposition. I am
free to disagree without proof until you offer some proof which you
haven't done. Where's the beef, Jim?

> > There was lots of growth besides the 4%.
>
> Yep. There was 34% growth from 1990 to 2000. That's a good thing.

And 41% of that 34% was caused by the Techs. Does that tell you
anything?

> How so? My statement is obviously true because 34 - 30 = 4

Just because 34 - 30 = 4 doesn't mean a thing regarding causality
in reality.

> No change in growth = changes had no effect on growth. Obviously true.

Bullcrap! The changes had a 41% effect on growth. Other things had
a negative effect on growth. Why do you insist on ignoring the many,
many other possible factors?

Hams steal more software than any other group that I know of. I had
never heard of ELNEC when I was about to participate in Intel's
AZ field day for the first time. A fellow ham employee just handed me
a copy of ELNEC. Before I fired it up, I thought it was shareware.
When I discovered it was copyrighted, I ordered my own copy.

You forgot that Dick has a crystal ball that tells him exactly what people
are thinking no matter what they are saying or even whether they are saying
anything at all. That crystal ball is what makes Dick so omniscient.

To almost every ham I know, "all HF ham bands" means "the 80, 40, 30, 20, 17,
15, 12 and 10 meter bands". That's not just my definiton, it's the commonly
accepted one.

You seem to be telling me that your definition of "all HF ham bands" is something else.

>There are some on this newsgroup who respect you immensely...

That's a good thing. Think about WHY they do.

>then there is
>me who thinks you're nothing more than an irritation who likes to bring
>extreme definition into a topic--when it is one you tend to disagree with.
>If it's something you agree with, you are quite liberal...

The above question ("what mode did you use on 30 meters") is a very simple and direct question. It's not about me at all. But you've repeatedly avoided a direct answer for some reason.

Why not just chill out and answer the question?

In the instance I agreed with Larry on, the behavior of the
hams that wouldn't relinquish the repeater for other use
is, buy all measures, a disgrace.

In your instance, I would agree that the "users" are
free to tease, cajole, or otherwise challenge the use of
your repeater for traffic and weather...IF that is the
rules established by the "owner(s)" of the repeater.

Cheers,

Isay it because...IF, as you believe, talking traffic on the way
to work constitutes a violation of the pecuniary interest
prohibition, then all the thousands of such discussions
have been challenging that interpretation for years.

> > As to the legitamate use of ham radio for traffic condidtions,

Clay,
How about some details?

What's their address?
What do they say they will do?
What's the member benefits?
Any publication(s)?

As to your specific questions...I am unaware
of any name change for ARRL and I have
heard of no effort by W5YI to start any
alternative organization.

Fortunately, that is the case; that the repeater owner has no established
rules. It's also a private (non-club) repeater...which makes it really,
really nice because there's no challenge to the non-rules :)

Jim/N2EY would ask for my definition of "no" in "no challenge" but you can
figure it out, I am sure.

Please don't misinterpret what I believe. I don't necessarily believe it
is a rules violation, as stipulated above. What I *do* believe is that
there's potential for it to be *CONSTRUED* as a rules violation. On laws
that can threaten me, I am pretty cut and dried: if you don't have
transmissions/communiation that are of a pecuniary interest, then you don't
talk about how to get to work.

True. And, neither do I (care that other hams think it's OK). The point
that I highlight is that *if* it is ever brought into question--it *won't*
be because someone heard *me* involved in a communication like that...

Other than that, it is simple mind masturbation.

Wow! You are kidding, right? Bill, are you a member of the ARRL? The reason I ask is because if you get QST, look at the very top right corner of your magazine when you get it in the next couple of days, if you haven't already received it.

You'll see the tagline "the national association for AMATEUR RADIO" right under the ARRL initials. I can't think of when this came about...maybe about 6-7-8 months ago. Not without some debate (as usual) also. In fact, the agreement that was signed between REACT and the ARRL was seen, by many amateurs, as a 2nd slap in face by the ARRL after introducing the idea of this tagline--many believed that the ARRL was "positioning" itself to become the all inclusive (CB, FRS, ARS, etc.) radio organization. The agreement with REACT was seen by some to be the first "official" act to bring on board CB to the matters of the ARRL.

I'm sure Ed can highlight some of the debate that went on, there was even some of it here on this newsgroup--surprise, surprise.

My two cents' worth is that this type of discussion is not a
violation unless one is generating a traffic report for a non-ham
orgsnization who will be using it for their own precumiary purposes.

The ARRL now identifies as:

ARRL - the national association for AMATEUR RADIO

See it on the letterhead and on the cover of QST.

IIRC this was done by resolution of the Board late last year to
emphasize the "advocacy of amateeur radio" function of the League.

More like a quarter century or more, Bill.

I first got on 2 meter FM in 1977, by building a Heathkit HW-2036 kit.
Traffic conditions were a common topic back then everywhere I went,
and I traveled quite a bit back then. FCC never had a problem with it.

>Larry,
>Let me give you a partial agreement. It is the avoidence of effort
>to accomplish a skill which can NOT be justified as a requirement
>that NCTA opposes.

Bill:

Thanks for your most gracious agreement, even if "partial." However,
IMHO, code testing in the ARS is very well justified, considering the
valuable characteristics of the Morse/CW mode, and the fact that
they cannot be exploited by hams unless they *do* expend the effort
to learn the Morse code at a useful proficiency level.

>Clearly, if testing for CW ends, then an
>individual won't need to expend the time/effort to learn morse...unless
>that person wants to do so voluntarily.

Allow me to point out that *everything* a person has to do to become
a radio amateur is "voluntary." The retention of code testing is justified
within the overall set of requirements which must be voluntarily met,
due to the benefits to the ARS of retaining this capability among future
licensees.

>Generically, I oppose any requirements which can not be
>rationally defended as being needed.

And, my dear friend, I have "rationally defended" code testing
requirements here, on Fidonet, and in comments to the FCC, for
over twelve years.

>That's true for just
>about everything in life as I see it. All my kids learned
>to drive standard shift vehicles...not because they just
>wanted to, they did so because if they didn't they wouldn't
>be able to drive at all since every car we own is manual.

And I have absolutely no problem with the fact that you levied
this "requirement," even if by default. My own girlfriend finds it
very inconvenient that she can't "borrow" my car because it

has a 5-speed manual gearbox, which she stubbornly refuses
to learn how to drive.

>There will be those hams that come to ham radio and discover
>there are other hams out there that only use morse code.
>Some of those new hams will learn code to talk to
>them. Of that I am certain. You, Larry, can be a
>champion for the mode...or you can bemoan the lack
>of code testing and convince no one of its value as
>you see that value. The choice is yours.

Perhaps you're right, Bill, and, in my own way, I have
"championed" the mode for nearly as long as I have been a
ham. I have taught the code to many hams, and have
encouraged others to learn it without actually acting as the
"Elmer" of record. However, I know from personal
experience that without the code testing requirement, a
prime motivation to actually make the first attempts to
learn it simply won't exist for the overwhelming majority
of future hams. I learned the code to access HF voice
privileges, and for no other reason at the time. I became
a code advocate *after* I learned it, not before. This
experience taught me a lesson about the value of having
certain "requirements" set for us -- they have the benefit
not only of triggering a need to do something we would not
ordinarily have done, but they ensure the continuation of
valuable skills.

As a corollary, soon we will have jet airliners that can literally
fly themselves, from gate-to-gate, through the entire flight
regime...without human intervention. Does this mean that we
no longer need to train pilots to fly them "by hand" as well?
I say absolutely not, for obvious reasons. If any computer has
ever crashed, for any reason whatsoever, we then see the
need for human pilots to be in the cockpits of our airliners,
forever. And unless the laws of physics and economics which
make Morse/CW a highly practical, robust, and easily implemented
mode are somehow revoked, we will always benefit from
the requirement for radio amateurs to learn it.

Bill:

It occurred at the 1995 Maryland ARRL State Convention at the
Timonium Hamfest, Timonium, Maryland. Then ARRL Atlantic
Division Director Kay Craigie, WT3P, and then ARRL Vice President
Hugh Turnbull, W3ABC, were the ARRL officials present. You
could ask if they recall the incident. I never got the name or call
sign of the enraged NCTA YL who led the pack of attack dogs that
were set on me the minute I mentioned "code testing" -- mainly
because she never stopped yelling long enough for me to do so.

Upon further reflection, I wish to retract the above statement. During the incident I mentioned, I was not actually called a "MFSOB." I was, however, accused of a variety of things detrimental to the ARS, mainly because I held the opinion that more could and should be done to support code testing requirements. I humbly apologize for the confusion. I also apologize for referring to the NCTA/YL as a "shrew." I have a conscience about such things, and just want to avoid the same emotional over-reaction that I was subjected to at the time. This incident did leave somewhat of an emotional scar, and has colored my attitude toward the ARRL ever since. Perhaps I need to "get over it."

I suppose, when you operate from a friend's ham set-up,
it's yours for the duration of the operating session. Then
you give it back when you're done. Oh, you should give
it a brief inspection ("okay, it looks like a Kenwood
and a beam for 10-15-20") to be reasonably sure that
it will work properly without trashing the spectrum.

With modern equipment, the FCC doesn't get that
worried about technical foul-ups. When was the
last time someone got a NAL for a technical
problem? Most NALs are for bad behavior.

What about the WARC bands? Some people may say "all bands" and have
actually meant "160, 80, 40, 20, 15 and 10 meters". Or maybe not even
include 160.

Oh, that'll get you a cup of coffee for sure. If credentials don't work,
it's everything else's fault. Have you ever looked back on your repertoire
of excuses in your posts that you make defending how you have "always been
passed over?" Maybe you interview really crappy, Larry. Maybe you have a
really bad personality. Your antics here on this newsgroup certainly aren't
those preferrably seen in an HR person. Maybe the interviewer was smart
enough to perceive your failure before you wasted their time and yours.

I am certain, Larry, that your vocabulary is a far cry from mine and even I had to look this up. Incidentally, I'm not so sure your or Len's use of the word, nor its spelling, was quite up to measure. Here ya go, maybe this will help:

Onomatopoeia

Definition
Onomatopoeia is a figure of speech in which the sound of a word echoes the thing it describes.
It is a form of symbolism in sound.

Examples:
Buzz pop bang
Swish cuckoo hissing
Burble twitter sizzle

Use
Onomatopoeia is used for emphasis or stylistic effect.
It is featured very heavily in children's rhymes and poetry in general.
It is also used extensively in advertising, as in the slogan 'Snap, crackle, pop!'.

NB! 'Onomatopoeia' is derived from the Greek term 'make a word'.

You occasionally hear such on commercial terrestrial broadcast TV.
I've even heard the "F" word on the CBS network (when they had the
Sept 11th fireman special a few weeks ago). The word didn't end....

Fair enough, that's your opinion and argument. We
obviously disagree on that.

> > >that person wants to do so voluntarily.
> >
> > Allow me to point out that *everything* a person has to do to become
> > a radio amateur is "voluntary."

Agreed...but IF a person wants to become a ham,
those no longer are voluntary IF a license is the
end goal. I know the issue of "voluntary" has been debated
in the past ad nauseum...so let's just agree to disagree
as to if/when voluntary becomes required.

> > The retention of code testing is justified
> > within the overall set of requirements which must be voluntarily met,

I'll agree that you have defended your position.
We again must disagree as to if that has been
rationally based.

>
>Kim W5TIT

Kim:

As usual, you are totally incorrect. Neither example is even remotely
"gray." If a licensed amateur is employed at a Domino's Pizza, answers
the phone, and it's a ham radio friend of his on the autopatch ordering
a pizza, then the only relationship that exists is the normal merchant/
customer relationship. They can, during the phone/autopatch QSO,
talk about ham radio, use call signs, and order the pizza right down to
the last anchovy, and still never be anything but absolutely, perfectly
legal under Part 97 Rules. Now, if the ham at Domino's installs a
transceiver at his store location, then proceeds to use it to take orders
for pizza, THEN he has violated Part 97 rules. However, the autopatch-
to-landline pizza order is absolutely, perfectly, and metaphysically
legal. I have personally used the autopatch to order Chinese take-out
many times. My accountant using ham radio to get directions is also
perfectly legal, as long as we do not, as already stated, discuss the
details of the professional nature of his visit.

Again, I warn you -- you are not qualified to determine "gray areas"
with regard to ham radio communications. I am. You are not. Stay
out of this. You are beyond your depth. Go back to chiding people
for wishing to get a WX report on your local repeater. At least there,

you can act like a big shot know-it-all repeater cop, without being among others who realize what a fool you are making of yourself -- except for the guy asking for the WX report.

Aw, this question of "did you say" is really an exercise in semantics. Except for the few instances in which people *really do* refrain from cursing or implying cursing, it is everywhere on the bands. What is the difference between hearing the phrase, "screw that" and "f___ that?" To me, there is none, as the implication is equal to its counterpart. One of the most humorous conversations I've ever heard on ham radio is that of a discussion about the corona balls on top of antennas...hilarious and they do it with a straight voice!! Once again, too, these same people that discuss the corona balls are the same people who'd likely tell others that discussions of politics and religion, etc., are not good on ham radio. Balderdash, I say. I wonder if balderdash is a good example of Onomatopoeia? Oh well, that's another thread also...

If only George Carlin were a ham...we could tell him that it's his *responsibility* (referring to another thread wherein it is implied that famous people have a responsibility to promote ham radio) to amateur radio to put out a list of, oh heck...what was it, Seven Curse words? Whatever it was, ham radio could double it...LOL

And, yes, you are right. Anything that is transmitted over public airwaves is equal to what can be said over ham radio...at least that is my understanding of the legality of language in ham radio. If Howard Stern can say what he says on broadcast radio, then we could also say it over ham radio. Not that we should, but we could. I can't remember their callsigns now, but there used to be two attorneys who are hams and would have really early drivetimes (like 5AM). One morning they got into this very discussion and it was their conclusion that it would be hard to press the issue of hams using "curse" words over the air, when broadcast radio does it.

It really boils down to a matter of interpretation...my "screw" is your "f___" and your "ahole" is my "asshole." Ewww, that didn't come out right, eh? OHMYGAWD, neither did that...LOL I better stop while I'm behind...whoops, there I go again.

(By the way, the above stuff could have been said on ham radio)... :)

Hope the vocabulary lesson on Onomatopoeia will help expand your brain a little. It needs a whole lot more than a little expansion, but that'll be a start...

And, hmmmmm, the guy asking for the weather report pretty much lives in the same area I do...why in the hell does he need a weather report? It could be pouring down rain where I am, and bright and sunny where he is. My answer to him would be, "give it a few minutes and see if anything changes. Get back to us if it does, because then maybe it'll have changed here, too."

And, why would any fool driving around in a city, near a city, around a city, think that there is going to be anything but traffic jam conditions on all the main roads into and out of that city? Good grief, Larry. Discussions of medical conditions are not OK for you, but discussions of weather and traffic are. So, as usual, everyone must think and act like you. Thank goodness, your will not be done.

Yes, the ex-AA8DP.

I knew him going back to early 1993, when I started checking into the 3905 Century Club WAS Net when I was still licensed as KB7PKE.

He wasn't as radical then, but things started going downhill around 1995. He didn't check in as often, and was often heard up the band between 3930 and 3950.

If the ARRL is willing to provide the tapes, there are approximately 6 different broadcast TV stations that I currently work with in promotion of our club, and amateur radio in general. If there is any audio tapes/carts for radio I would also work with the radio stations in the area I would also take those to the radio stations I deal with.

I'm getting an average of 8-10. Not sure what Early's average is, but
when I listen it seems to be just a few more. I'd settle for ten
regulars interested in NCS/ANCS spots, and a dozen or so others who
each make it two or three times a week.

>In those days, however, there were dinners, parties and
>lots of eyeball get togethers among net participants. Maybe a resurgence of
>those would get more people involved.

That's a definite possibility. If we do anything along those lines,
we'll probably get both nets together on it. Even though they're
technically separate, most people (myself included) tend to think of
them more as two sessions of one net.

>Sounds "cheap" but people thrive on getting together. Also, people thrive
>on feeling a part of something. I've always, always thought that every time
>Dallas RACES is up on 146.880, then the DFW traffic net should be up on
>145.190.

Now that's an idea. I'm moderately active in Collin Co ARES, but I
know we have at least a few people who could handle being NCS while
I'm out spotting. Monitoring isn't really a problem for me either;
K5PRK has started linking in their 440 machine during the nets, and I
just got through setting up my extra dualband mobile as a portable
base station. (Through is a relative term...it's in a functional
intermediate stage until I have all the stuff I want to pack into the
casing...more details at http://www.kd5nrh.net on the 'My Projects'
page)

I think I'll run this one by the Early NM, and see what we can come up
with. After thinking it over for a few minutes, ideally, I'd like to
find a linked (or at least linkable) 2m/440 system near the center of
our regular coverage area, and see about getting permission to use it
for special NTS sessions anytime an ARES/RACES emergency net is active
in the core four counties. The .19 repeater is good, but it has a few
dead spots, (at least a dozen of them in my apartment complex's
parking lot) and IMO, one of the minor failings of the DFW nets is
that they're both on Dallas repeaters. It would be nice to get some
of the other cities actively participating.

It's an old problem flaring up, but it's enough to put him in the
hospital. Apparently, there's a new surgical procedure that can fix
him up better than before, but they're having trouble finding a
surgeon that can do it. Carolyn, KC5OZT, has been keeping up with it,
and will generally announce the latest news on the Early net.

Larry,

Maybe, just maybe, the ARRL folks let the YL spew for a reason. They may have thought that by carrying on that way in a public forum, she destroyed her credibility and simply made herself look foolish.

<wa2ise@ix.netcom.com> writes:

>I've even heard the "F" word on the CBS network (when they had the
>Sept 11th fireman special a few weeks ago). The wor[l]d didn't end....

Tell ya what - if a ham is ever in a similar situation as that fireman, I
won't have a problem with some strong language. Otherwise, it's
Not Acceptable. And the FCC agrees with me.

The content standards for broadcast services and the ARS are different,
and should be different. The BC folks have scheduled programs and warnings
that certain shows may be offensive or inappropriate. Amateur radio has no
such controls/protections, so hams must behave in a "G-rated" fashion on the
air. That's just the way it is.

Yes, some hams cuss on the air. Some even make a point of it, or think it's OK,
or a freedom of speech issue. None of those excuses is valid. Not to the FCC,
anyway.

The end result of cussing on the air is to damage the image of the ARS with the
public and the FCC, and to give ammunition to the enemies of the ARS. That's
why it's Not Acceptable.

Here's a scenario to consider:

Suppose a commercial radio service wants the FCC to reallocate 146-148 MHz to
them. Of course hams try to defend that half of 2 meters, pointing to the large
number of repeaters in that segment, public service, etc.

The commercial folks then provide the FCC with tapes of hams cussing on the
repeaters, chiding, teasing and "busting on" other hams for innocuous and
perfectly legal conversations about weather and traffic, and other Not
Acceptable behavior. How are hams going to argue against that?

What good is ARRL's "Big Project" if, when we try to demonstrate ham radio to
young people and their parents and teachers, the sort of thing described above
comes through the 'speaker? You don't get a second chance to make a first
impression.

Not Acceptable behavior doesn't just move Amateur Radio "one step closer to
extinction" - it's more like a full gallop in that direction.

Simple. If the individuals involved do not make a point of mentioning the name
or location of the pizza shop any more than necessary, they are not
advertising.

>
>And, why would any fool driving around in a city, near a city, around a
>city, think that there is going to be anything but traffic jam conditions on
>all the main roads into and out of that city? Good grief, Larry.

Because in many situations traffic flows smoothly even a rush hour.

Here in Philly, for example, if I want to get from Center City to where I live
and work, there are at least 3 routes using the interstates:

I-676 east to I-95 south to I-476 north
I-676 west to I-76 east to I-95 south to I-476 north
I-676 west to I-76 west to I-476 south

Depending on traffic patterns, special events, breakdowns, accidents and
construction, any of these three routes can be the fastest or the slowest.
Variations in travel time of a half hour or more are common.

I have seen this same sort of thing in other cities, like Jacksonville, Florida
and Rochester, New York. Hams in and around those cities help each other
deal with the traffic.

--

Kim, you have chosen to live a long way from where you work, in a city with
inadequate roads and all-but-nonexistent transit. Your choice has pretty
much guaranteed you a long, frustrating, energy-inefficient, air-polluting
commute. Perhaps it bothers you that other hams in other places (like Larry)
have made different choices and don't have to got through that sort of commute
every working day.

In short, jealousy.

From: Dick Carroll dixie@townsqr.com

> So try this one- why do you think that so small a percentage of US hams
>ever join ARRL?

1. Your reason: They feel the ARRL HQ staff are elitists.

2. How many of the non-members do you think are not active as hams at all? I meet a number of licensed electronics engineers in my dealings with industry on RFI matters that tell me they haven't been on the air in years. (That dealing with industry on RFI matters must be part of my caring more about myself than ham radio...)

3. What percentage of those that are not members do you think became licensed, but never became active hams? I personally know about 3 or 4, and they are not really interested. Do you really expect them to be members?

4. What percentage of those that are not members are not even alive? With the 10-year expiration period, those that become silent keys can retain their license for 9.999 years.

5. What percentage of those that are not members may be in some financial straits and are choosing not to pay for membership before they pay for groceries.

6. And some small percentage of non-members are letting their membership lapse to hold out for a book offer for ARRL to sign up again.

> I really believe I know. And the answer wouldn't be
>complimentary.
>It is simply that they don't believe the elitists who populate HQ care

I missed this post yesterday. Are you suggesting that IF a
ham is listening to WABC-FM (New York City) and hears
a traffic alert about an accident at milepost 56 on I-80,
that the ham should not (or is prohibited from)
let other hams know what was reported? There is no
such prohibition I am aware of...unless you are specifically
talking about direct retransmission of the commercial
broadcast audio.

> We can, however, retransmit items from the NWS, I
> think.

We can, in our own words, retransmit (as part
of a QSO...not as a one way broadcast) just about anything.
That'd include the latest stock quote, news items,
weather reports or whatever.

Cheers,
Bill K2UNK

Technically it can't...BUT, apparently the FCC doesn't
consider that possibility, however probable or
improbable, to warrant not allowing the autopatch pizza
ordering. Perhaps when the FCC issued its clarification
on the pizza order via autopatch, you should have
filed opposing comment to warn the FCC of such a
clandestine advertising effort.

> > They can, during the phone/autopatch QSO,

But even the FCC didn't place such a narrow restriction
on the pizza order scenario. Clearly when the pizza
shop answers the phone, they will likly state something
akin to: Hello, Joey's Pizza Shop, how can I help you?

Frankly, Kim's personal interpretation of what the
prohibition on using ham radio for pecuniary interests
means has been taken to ridiculous extremes. What
seems totally amazing is that Kim even ignores the
FCC rulings that have already addressed several of
the specific scenarios she claims are violations.

Jim,

Well said...and the only thing I'd add again is that
if everytime a ham speaks on that ham
should consider that his/her voice is being
listened to by one or more children, then
perhaps the potty mouths amongst us might wake
up and act in a more civil manner.

I am not offended at all by vulgar language and
accept it in the proper context and situatiuons..on
the air as a ham is not one of them.

Cheers,
Bill K2UNK

Probably half of all licensed hams are not active for whatever reason,
including SK status. I know of no way to "prove" that any more than you
do.

I
> meet a number of licensed electronics engineers in my dealings with industry on

Ed I had come to believe that you didn't number among the snobs at HQ.
You just work there, right? Hope I wasn't wrong.

Unless you have an assignment as the singular HQ poster here to RRAP
(the very occasional presence of Jon Bloom teh exception) your presence
here helps to confirm that.

There are all sorts of reasons why hams do, and do not do all sorts of
things.

>
> Most of your conclusions are "simply" true -- too simply to be plausible.

If you believe that a majority of hams don't view ARRL HQ as being
largely populated by elitists, you really do need to do *something* with
your head. Maybe get it into the game. It's been the reality for the 45+
years I've been licensed.

Dick,
On the specific point of shielding their vote,
I completely agree.

The by-laws of the ARRL should NOT allow
any vote by the elected representatives to
be shielded or otherwise not recorded by
individual. How else, but by examining a
person't actual voting record can I judge
my future support for that person. ALL votes
should be recorded by individual and by
yea or ney (or absain if applicable).

Cheers,
Bill K2UNK

> it wasn't even your question originally...

You claimed to have worked "all bands" in a discussion where the context
was "all HF bands". To any reasonable and knowledgeable reader, that
must include 30 meters.

>The question I asked was: "What mode did you use on 30 meters?"

>then I'll answer with: I don't
> know.

OK, then. Simple question, simple answer.

>Definition
>Onomatopoeia is a figure of speech in which the sound of a word echoes the
>thing it describes. It is a form of symbolism in sound.

>NB! 'Onomatopoeia' is derived from the Greek term 'make a word'.

Ahem...sometimes I am still astonished at the lack of folks to
connect humorous wordplay in here...or that folks is sooooo
up-tight about things.

Look up the definition for "poesy." Then connect it with the word
"onomatopoeia." ("poesy" is an old form of "poetry") Larrie waxes
so poetic with his self-descriptors he should have applied for a job
with Johnson's Wax company. :-)

"Onomatopoesy" is more elegant than the NYC-ethnic "hocking a
loogie on the floor" but, as Larrie described himself, it is
"sinonymic" with what prospective employers did for him. :-)
:-) :-)

>Just exactly what in that statement is not true?

What is not true is that you can't prove that medical code waivers and the dropping of the code test from the Tech license brought about 4% more growth.

There might have been any number of factors present, and it's unlikely that I, Cecil, or anyone else can list every single possible variable. A difference in population growth, different policies on recruiting by the ARRL, more AR operators bringing in people, more testing sites, more testing dates, fewer testing sites, fewer testing dates, more congestion in the CB frequencies -- any of these (and I don't have any idea which, if any, are true) *might* have caused changes in the number of Tech licenses issued.

The point is that unless you can *prove* (and I don't believe you can) that the two factors you state were not only causal, but instrumental in the change, you've proved nothing. And even if you managed to prove dropping the code requirement was both causal and instrumental, factoring in other issues might also change growth, so your statement would still be false.

(For example, what if there were 10% fewer testing sites available, and because of that, fewer people received licenses because they didn't want to travel to a testing site. Maybe growth would have been almost 38%, instead of 34%.)

You might well be correct in your assumption, and in fact, I suspect that dropping the code requirement drew a number of people to get licenses, but I don't see how it can be proven by you or anyone else.

Sean.

Just thought about this one. Do the cable companies still have to provide "public access" channels for general use? I remember the last time I had cable (uh, years ago) they had to under agreement with the cities. There was a guy down here who used to strap his video recorder to his truck and he'd drive up and down Lancaster Ave in Ft. Worth and have a hour show on the shops on the street and the history.

If the cable channels do still have to do that, wonder how many hams would be willing to do ham shows on those channels?

I think it's a lot looser than you realize, in some areas. I've heard some
pretty risque language on simplex frequencies around here, and even from
some pretty "prominent" hams.

>
> Yes, some hams cuss on the air. Some even make a point of it, or think
it's OK,

That's
> why it's Not Acceptable.
>

Yet, the use of "it sucks" or "screw it" or "like Hades," etc., is fairly
frequent. It may be "illegal" to curse on ham radio, but it is implied all
the time.

>

Part of the ARRL's Big Project should probably be to mention that, just as in other life experiences, there are good and bad in ham radio. Part of "teaching" is to inspire the right choices.

And, I don't think cursing on the air--even out and out cursing--moves the ARS anywhere but where it's been for years.

Bill, I think you are a little prone here to extremism yourself. I've said a few times, and you've chosen to ignore, that I don't mean to imply they *are* violations. I have said I don't care to get tangled in any kind of test of whether or not they are violations.

I *KNOW* it is legal to order pizza; *you* are ignoring the fact that Larry's (I think) scenario includes TWO hams on an autopatch--one of whom works at the pizza place. There is *potential* for abuse there, that is all I imply.

It cannot be proven. And, what *if* you are known--for example--to own stock in ICOM? Or, you work at an ICOM store? And, what *if* you keep mentioning ICOM over and over again on the air? It's probably not illegal at all. However, "we" all know what "you" are doing and what "you" are doing is probably unethical in *context* of the rules.

Sorry, but that potential is a fantasy. The person at the
other end of an autopatch is just a "person" at that
point with no different status because he/she might also
hold a ham license.

As to potential for abuse...again, not at all apparently
in the eyes of the FCC.

Your mileage may vary.

Cheers,
Bill K2UNK

> years back?

No. Read the second paragraph of the "Conditions of Grant" on the back of your FCC form 660. Each of us is issued a station license (and a callsign for that station).

On the same document (read the first paragraph of the "CoG") individuals are issued an operator license.

Some station licenses (Clubs, Mil Rec) are granted station licenses, including a call sign, but not an operator license. Thus you can see that the call sign is assigned to the station, and not to the operator.

You might want to read the following, Bill. Hey, Larry, you might want to
pay attention here to, and I suppose Jim/N2EY might want to get in on this.
Bill, for your benefit, you may wish to just skip to the end of the message.
However, to respond to your query, Jim's smugness, and Larry's attempted
insults that I don't know what I'm talking about:

How 'bout this: 97.113(a)(5): "Prohibited Transmissions. No amateur station shall transmit communications, on a regular basis, which could reasonably be furnished alternatively through other radio services." Hmmmm, seems to me that traffic reporting would come under the "could reasonably be furnished alternatively through other radio services" category...

And, now specifically for you, Bill (yeah, I strung you along a little here--kinda like Jim/N2EY likes to do:

97.113 (again):
(e) No station shall retransmit programs or signals emanating from any type of radio station other than an amateur station, except propagation and weather forecast information intended for use by the general public and originated from United States Government stations and communications, including incidental music, originating on United States Government frequencies between a space shuttle and its associated Earth stations. Prior approval for shuttle retransmissions must be obtained from the National Aeronautics and Space Administration. Such retransmissions must be for the exclusive use of amateur operators. Propagation, weather forecasts, and shuttle retransmissions may not be conducted on a regular basis, but only occasionally, as an incident of normal amateur radio communications.

I cited the whole section, but you need only pay particular attention to "*or signals* emanating from *any* type of radio station *other than* an amateur station..."

Now, here's the quiz: can ya guess *why* we shouldn't/cannot retransmit things we hear on broadcast stations?

If there were a reasonable suspicion of that, then the matter would
have to be directed to the FCC through the local OO's. Then, the
FCC would have to examine the evidence and make a ruling. It is
not likely that such an investigation would change the Part 97 rules
involving the use of amateur radio to order things from businesses
via autopatch. Any blatant violators would be dealt with in the
usual way, and everyone else could continue as usual.

>> They can, during the phone/autopatch QSO,

You have just described 99% of the SKYWARN reports I've heard.
Pure genius.

>And, why would any fool driving around in a city, near a city, around a
>city, think that there is going to be anything but traffic jam conditions on
>all the main roads into and out of that city? Good grief, Larry.

Don't look now, Kim, but could they perhaps be trying to *avoid* said
traffic jams? I don't know about the DFW area, but I'll bet there are
many ways to get from Point A to Point B, given helpful assistance from
fellow hams who know the local area. I have received such help many
times via amateur radio.

>Discussions of medical conditions are not OK for you, but discussions of
>weather and traffic are. So, as usual, everyone must think and act like
>you. Thank goodness, your will not be done.

My *will* is not done any more than anyone else's, Kim -- but I'm sure
yours always is, isn't it? That's because you're a much better person
than I am, right? Well, keep on thinking that, Kim -- it's the source of
a lot of amusement in this newsgroup!

Phil:

In that context, there's one heckuva lot of "advertising" being done
on ham radio frequencies!

Are you going to call out the Radio Kops, or shall we leave that
to Kim?

Jim:

If that's the case, let Kim be jealous of this: My "commute" to work
is 3.5 miles one way, usually takes from 10 - 12 minutes, and I have
free, dedicated parking. I fill the gas tank on my '01 Toyota Corolla LE
every three weeks, and it usually takes 9 gallons. This includes my
weekly commuting and all other incidental driving during days off, etc.

Allow me to point out that *becoming* a licensed amateur radio
operator, and meeting the licensing requirements to do so, is not
required - it is voluntary. An action which is required within the
confines of pursuing a voluntary activity is undertaken in a
voluntary manner, or not at all. If not, then the privileges attached
to that action will not be received.

Jim:

If that was their intention, they certainly succeeded. In fairness to
Hugh and Kay, I don't think they could have gotten that lady to calm
down if they wanted to. However, once the jeremiad was over, they
should have at least made some statement indicating disapproval
for her attack. That didn't happen. I have had a difficult time
understanding how they could allow this to happen, and my dealings
with either of them since the incident has been limited to cool,
detached courtesies, and little else. I believe that they owe me an
apology, but I'm certainly not going to ask for one.

Oh. Maybe those transmissions aren't allowed in your area...just joking,
just joking. You know, those where you hear a ham mentioning that he is
able to go at least 10-15 mph above the posted speed limit? Or those who
are talking about "skipping work" that day (no, not illegal, but teaching
what to the youngsters?) And other such things...

If we're going to uphold standards for the younguns...shouldn't we stop
justifying which are good to uphold and which we can kinda shove under the
carpet--or try to?

I guess I am an incurable idealist.

Hello, all!

Passed the General Written tonight using primarily the QRZ site to prepare, due to lack of time. Hope to take the code and Extra exam a month from now, after a lot of CW practice with a home-made keyer that will work with a 2m transceiver. Delays in getting this keyer to work (bad soldering technique on my part) have slowed things down there.

I guess it all depends on your interpretation of "smooth".

I have an engineering group located at our facility in Richardson, about 2 miles off US75. I regularly fly to DFW and drive to visit them, often arriving during at DFW morning rush time, and leaving Richardson in late afternoon for the return to DFW. Only rarely do I find myself traveling less than the posted limits on your highways.

With all kind wishes,

de Hans, K0HB

One cannot volunteer to become a licensed amateur radio operator. One
must meet the requirements. You may feel that it is voluntary but it
doesn't matter how you *feel*. To be a licensed amateur radio operator,
everyone must meet the requirements whether he/she likes them or not and
whether he/she agrees with them or not.

Kim, I think the important distinction with what words that can be said over the ham bands, usuing broadcast radio and television as the benchmarch, is that we may be able to say those words, but have the dignity and self-respect to not say the words....

I, myself am no angel.... I accidentally said the word "hell" before. But quickly apologized for it.... I suppose if I am talking to someone right before a car crash, I may vent a few more, kinda like Bill Cosby's comedy line.... "First ya say it, then ya do it (in an accident)"

One benefit of amateur radio amongst the many I have found is that it has helped me curb my language outside of amateur radio.

> Idealism should start at home...

Oh, not at all am I complaining. I really don't care what "kind of
language" people use on the air. I have a tuning knob and an on/off button.
What I am pointing out--that you've totally let go over your head in your
angst to turn this into a callsign issue--is that "we" say "we" are good
people and that "we" don't condone cursing on the air. Yet, "we" have our
implications in language every day, as noted above.

You might be one of those people I am talking about. You apparently have a
problem with my callsign, yet you probably use language every day that
implies cursing. Have you ever had occasion to mention that you are
speeding on the highway? My callsign is legal, your speeding is not.

Go a little slower and be a lot more analytical in what I am saying before
you "think you have it." :)

Larry didn't say whether there was anyone from ARRL HQ there, Dick. Is your paranoia about ARRL HQ people getting a bit out of hand that you imagine them in control of everything?

In realilty, if a Director or SM were there, the HQ staffer would keep his or her mouth shut most of the time.

Perhaps I could give you a bit of "ARRL 101" to explain the structure of the organization so you wouldnt' be so easily confused.

>"Strictly?" Of course not,...(SNIP)

My point, exactly, Ed. However lesser informed persons have insisted that
said radio services (those "strictly" for "recreation") exist.

I could, by that rationale, state that certain Public Service frequencies
are "strictly recreational" since when I use them, it is in the line of duty of
volunteer work done for my own personal satisfaction (ie: "recreation")

>I imagine that "recreational" is the word
>that best describes their use of Amateur Radio.

But NOT "strictly".

When I got to the station of the local club, where they offer testing and other training the Monday night following the monthly meetings, there were two of us hoping to take a test. It was tax night and one of the scheduled VECs was unavoidably absent. A few phone calls were made and a member drove nearly 20 miles, each way, on the spur of the moment, to complete the examination team. Both of us passed!

For those who like to moan and whine about Amateur Radio's death throes, I can't help but wonder how they rationalize thier rants when NASA, the most conservative of any technology based agency in the world, see's fit to incorporate it into it's multi-billion dollar pet.

Also...for those (or "the one") who always whine about how little Amateur radio get's any media exposure, here's another prick in the balloon.

QUOTE:

Amateur Radio Hits the Big Screen (Again) in New Imax Film Space Station (Apr 15, 2002) -- Amateur Radio again is getting a role on the silver screen, this time in the new IMAX film called Space Station. The film--the first 3D IMAX movie--includes a segment depicting the Amateur Radio on the International Space Station (ARISS) program in action.

I think it's fair to say that any radio contact bears with it the
"potential" for abuse. Autopatch contacts bear a greater risk of
abuse, as they are often conducted with an unlicensed party on the
hardwired end of the conversation. An autopatch contact with a ham on
the phone SHOULD be "safer" than a "normal" autopach, as both parties
should be aware of the rules and regs regarding amateur radio.

>conducted on a regular basis, but only occasionally, as an incident of
>normal amateur radio communications.

Kim, I believe the intent of this is to prevent the duplication of the broadcast, but NOT to inhibit the relaying of the INFORMATION. Example... By your interpretation of this reg, it would be illegal for me to mention on the local repeater that I heard on the television that Robert Urich had just died. Now that sounds rather ridiculous, doesn't it? Now, if I had RECORDED the audio portion of that news story and then RETRANSMITTED it over the air, I would clearly be in violation of the statute cited above, AS WELL as in violation of any and all copyright laws protecting the television station's right to their material.

Exceptions to this would be any information that was obtained from intercepted cordless phone conversations and illegally intercepted cell-phone conversations. These transmissions are protected under law and information cannot be used from the interception of them.

Public safety transmissions (Police, Fire, Ambulance, etc.) are NOT protected and therefore information contained within their transmissions CAN be relayed. The key word here is PUBLIC. The police KNOW there are scanner listeners out there, that's why they have "discreet" frequencies...

>
>I cited the whole section, but you need only pay particular attention to
>"*or signals* emanating from *any* type of radio station *other than* an
>amateur station..."

Again, Kim... The statute refers to the SIGNAL and not the INFORMATION.

If you want to promote ham radio, try operating a kids day station at a mall. Our club did that last year, we set up in the center of an outdoor mall, we ran HF, Two Meters and PSK 31 on 20 meters. We also spent some money on a both that people could no miss (around $400,00) We also got a good supply of hands from ARRL. inluding around 100 Archie comic books. I just with the ARRL did a better job of promoting kids day. I is hard to find on the ARRL web site, and they do not mention in the Magazine until one month before it happens. Until I mentioned to our club members, most of which have been ARRL members for quite a few years, they had not heard of Kids Day. This year Kids Day is on June 15th. THere is also one in Juanuary.

Of all the promotions I've been involved in, Kids day is probably the least effective. Most parents were in too much of a hurry to let their kids stop and work a radio. It was kind of sad, because the kids were slowing down to look and the parents were chiding them or in some cases grabbing an arm to get them out of the area and wherever they were going.

But then I've never considered the Amateur Radio Service much of a kids hobby anyhow.

I see these as pretty good numbers, Jim. The classes I expected to decline have done so, and there is a small but healthy overall growth.

This makes me wonder about a couple of the mantras given out by various people regarding becoming a ham.

We need lots more Hams!

A slow growth is just about the best thing I can think of. The only reason I can think of for wanting double digit growth is that it would be a part of a spectrum grab.

We need to get kids to be Hams!

I always thought the ARS was more of an adult thing. Kids can participate, and can make excellent hams, but most definitely, most kids are not cut out for this. I think that the kids who want to become hams seek the ARS out, not the other way around.

Originally the rule was "no other class of station" Period.

In the mid-70s a few well-placed "space groupies" who were radio
amateurs employed at NASA Goddard Space Center near Washington DC
cajoled (with appropriate pressure) the appropriate FCC Bureau chief
to get the rule amended to cover NASA space communications for their
own personal/hobby interests. Some of us at the Commish' who were
train-chasing-and-photographing nuts tried to get the same treatment
for rebroadcasting railroad radio communications for our hobby use.

We were told not pnly "no" but "hell no".

The fix was in and is still in.

Dear ARRL,

I don't know if this fellow (see below) is a member of your
organization or not, but he is certainly making a nuisance of himself
in the rec.radio.cb newsgroup by continually advertising his "10 meter
amps" to CBers.

I thought hams were supposed to police themselves? If so, someone
should take this disgrace to amateur radio aside and let him know what
harm he's doing to the citizens band.

Sincerely,

Aaron H. Voobner

Val, it would appear that you're putting the cart before the donkey. Blow off the theory and the rules and get crackin' on the code. If you pass the code, they'll "just give" you a real live HF license, according to Bruce and Larry. If you know the code you don't have to worry about the rest.

>decline have done so, and there is a small but healthy overall growth.

Yes, there has been some slight growth since restructuring, but it all happened
in
the first 10 months or so after the restructuring. The total peaked early in
2001 and
have hovered in the neighborhood of 683,000 ever since.

There was growth before the restructuring, too. Check out

http://www.ah0a.org

and note the growth from Sept 1998 to March of 2000 (just before restructuring
went
into effect.

Note also that the FCC has been renewing Tech Pluses as Techs since April 2000,
at
a rate of over 500 per month.
>

>be a part of a spectrum grab.

I think what really matters is the growth of amateur on-air activity, and the
type of
activity. Having a million hams isn't going to make much difference if most of
them
are never on the air - or if they behave in such a way as to damage the ARS
when
they do get on the air.

>We need to get kids to be Hams!
>
> I always thought the ARS was more of an adult thing. Kids can
>participate, and can make excellent hams, but most definitely, most kids
>are not cut out for this. I think that the kids who want to become hams
>seek the ARS out, not the other way around.

Depends on what you mean by "kid"..

I got my Novice at age 13, Tech and Advanced at age 14 and Extra at age 16. Would
have done it earlier but for lack of information and resources. Amateur radio led me
to a career and many wonderful friendships, accomplishments and experiences. It has
always been a service for all ages, and should remain so. But kids will only know about
it if we tell them.

I agree. We saw explosive growth just after the NCT license -- more new hams
than could ever be properly Elmered. I think that reasonable growth is the
best course for the Amateur Radio Service.

Let me assure you that Jim is quite wrong. I was raised in the country and
am country through and through. As development encroaches upon this area,
my husband and I have even toyed with the idea of moving about 20-25 miles
further east.

Nope, it's ideal to drive from the heart of downtown Dallas to the cattle in
the country and I wouldn't trade it for the world. Traffic jams are my
haven in the morning and evenings...they don't bother me at all.

The Richardson area is where I've worked the longest in my career. You are lucky to be in that part of town driving West, presumably on IH-635 to get to the airport or East on IH-635 to get to Richardson. In either case, the traffic there is usually not that bad. On I-35, I-30, Hwy 114 (up your way--would be the road around Las Colinas, etc.), Hwy 75 in any direction coming into or out of Dallas, *any* of the veins that are near downtown, going to or from Richardson from the East (traveling west on IH-635 in the morning, or East in the evening, are all pretty bad. Average speed with no additional problems is anywhere from 20-25. Note I said average...because I'd say 635 is the worst, at a crawl most of the way to Richardson.

I'm sure you'll feel the pinch with the new High-5 going in up there, too.

Yep, I think so. I think getting hung up on language is secondary to some of the real crap that goes on over the air, and we've had lots of fun on our own repeater...when we "forget" where we are.

At any rate, you wouldn't want to be at one of our dinners, then, because we let loose in person... ;)

That was actually a snied comment. I actually have no idea if I've ever
been on 30...I don't think I have, since 30 meters is strictly digital, is
it not? I haven't done any digital.

A swap net is not "ordering" something over the air. What I mean by that is, if it OK to order pizza, then it is OK for me to call the local furniture store and tell them I'll be there to pick some furniture up, call the office supply store and tell them to get the following items ready because I'm on my way to pick them up, etc., etc. If you think not, what would you say is the difference between ordering pizza or the chair we'd like to sit in while we eat it?

Swap nets are just fine... The R&R mention that the rule directly addresses those items that generate a profit. Most of us cannot sell our equipment at a profit, right?

Well, that's the Part 97 part that I quoted. See Phil Kane's post. By the way...it's my regarded opinion that the reason we shouldn't/can't do this is twofold: liability and the fact that the FCC did not want to be dragged into court continuously when amateurs repeat things over the air that are either copyrighted or that end up being "mistakes" by the media.

Dick, maybe you should take some English lessons. Your statements
speak for themselves. It doesn't do any good to deny them.

1654. Space Ham [was: For Those Who Think Ham Radio's Dying]

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-17 04:06:46 UTC
From: lenover21@aol.com
Message-ID: <20020417000646.29664.00000620@mb-bk.aol.com>
Source record: 40974

In article <20020416085741.07506.00003516@mb-cc.aol.com>, somebody writes:

> For those who like to moan and whine about Amateur Radio's death throes,
>I can't help but wonder how they rationalize thier rants when NASA, the most
>conservative of any technology based agency in the world, see's fit to
>incorporate it into it's multi-billion dollar pet.

Heh. The first hurdle in trying to decipher the above is to get over "most conservative," a ludicrous description...except to those never having worked in any part of the US space program. :-)

The next hurdle in understanding is "multi-billion dollar pet," in an apparent reference to the Space Transportation System or STS, popularly known as "shuttle." As of October 31, 2000, there had been 100 shuttle flights, 75 since the Challenger explosion-crash. As of 2001, of 414 humans who had flown in space, 261 were Americans and most of those flew on shuttle. The International Space Station or ISS will require 44 total shuttle missions to complete construction, more afterwards to rotate crews and bring up fresh supplies. ISS is a consortium of 16 nations and the prime mover of crews, materials, and supplies for it is the US STS. The only other nation capable of ferrying anything to it at present is Russia.

While the biggest budgetary item in NASA is, at present, STS, NASA still bosses the unmanned spacecraft flights which includes the DSN or Deep Space Network for bringing in data via radio from unmanned craft. NASA continues with space research in materials, techniques, testing for both space and aeronautics (aeronautics is the second "a" in NASA).

The third hurdle is "incorporate." By dictionary definition, "incorporate" means to "combine, include, embody" or to "combine together in a single whole, merge." At *NO* time was NASA or USAF BMC or USA space efforts (Huntsville, AL) ever dependent on amateur radio to fulfill any missions, flights, or test programs.

> Also...for those (or "the one") who always whine about how little
>Amateur radio get's any media exposure, here's another prick in the balloon.

<snip of IMAX blurb>

IMAX cannot be shown in conventional motion picture theaters, only at certain theaters. There are now more motion picture theaters fitted for new digital forms of conventional movies than there are IMAX theaters in the USA.

The unfortunate fact (for amateur radio publicity) is that exposure of ham radio to the US public is almost nil in all popular media.

It should be fairly obvious that NASA requests some astronauts to get amateur radio licenses for NASA publicity purposes, not to advance or sponsor amateur radio activity. NASA must continually seek all avenues of public awareness of its expensive programs to remain a part of the US government's various programs.

"ARISS in action" as a phrase is part of the usual self-promotional spin done by the ARRL. That's fine for amateur radio but means absolutely nothing for NASA or the STS since they have their own infrastructure for communications, tracking, data retrieval in at least a three-tiered backup system for STS or any other program. Ham radio from the ISS or STS is an on-going publicity program, a part of NASA and the space agencies of the other 15 nations in the ISS consortium. Ham radio is NOT a "vital part" of space programs.

1655. Recreation [was Onomatopoeia]

>the majority of its participants, I imagine that "recreational" is the word
>that best describes their use of Amateur Radio.

Not applicable to certain minds within the US ARS, Ed. :-)

Those minds abhor anyone "enjoying" a hobby. Everything has
to be selfless devotion to duty in the "service." They must
continue to wear a "uniform" complete with rows of service
ribbons, insignia, march in ranks to martial music on a parade
ground, and fight the imaginary wars which threaten their
perceived status as some "5th military service branch" of the US.

As the old Roman cloth makers said to Ceasar in the Coleseum
cloth contest: "We who are about to dye salute you!" :-)

Meanwhile, about 500K+ model aircraft flyers and surface
vehicle modelers are happily enjoying, note ENJOYING, the
ability to remote control their craft through Part 95 regulations.
I believe that's called "recreation" or something like that.

Perhaps they should be ashamed of actually enjoying their
hobby, unlike some in the US ARS busy trying to get
everyone to march to their military music. Tsk, tsk, the
nerve of some non-ARS groups actually getting a radio
service for pure enjoyment!!! :-)

Good idea Kim, actually I was thinking that with all that money being spent on the "defense of ham radio", that they might have actually have had produced video and/or audio promo tapes.

There is cable access channels available here in the Mid-Michigan area, although I do not know how many people *actually* watch those channels except shut-ins. But I am going to become a member of the organization that runs the City Of Midland area public access channel, and my goal is to create a promo tape.

I am currently working on creating a report/paper form of my activities as a public relations person for our amateur radio club and would be willing to share that knowledge with others when I finally get it in printed/printable form.

Damn, how'd I miss all that? I've been licensed since the early 60's and never heard of uniforms, marching, or any of that. My Mom, who was first licensed in 1930 never told me about those things either.

I guess Leonard is telling tall stories again! Crank that organ, old Sir.

With all kind wishes,

de Hans, K0HB

Thank you for your "outsider's view", Lennie.

And that's EXACTLY what it is.

>Meanwhile, about 500K+ model aircraft flyers and surface
>vehicle modelers are happily enjoying, note ENJOYING, the
>ability to remote control their craft through Part 95 regulations.
>I believe that's called "recreation" or something like that.

And I agree. They enjoy it wholeheartedly and do something that I
immensely admire.

However that does NOT negate the fact that YOU have stated that there is a
radio service created by the FCC for "strictly" recreational purposes.

I have asked you REPEATEDLY to please cite the service created for
STRICTLY recreational purposes. You have not. You either lied or made a
mistake, and I am trying to figure out which it is.

>Perhaps they should be ashamed of actually enjoying their
>hobby, unlike some in the US ARS busy trying to get
>everyone to march to their military music. Tsk, tsk, the

Lennie the Loser retorts:

>Heh. The first hurdle in trying to decipher the above is to get over "most
>conservative," a ludicrous description...except to those never having
>worked in any part of the US space program.

NASA is >NOT< conservative in it's practices? It is >NOT< conservative in
it's technical tolerances nor whom it allows to fly in it's spacecraft?

Geez, Your Putziness...I didn't think THAT required any "deciphering".

>The next hurdle in understanding is "multi-billion dollar pet,"...

Only you required any assistance there, Lennie.

>While the biggest budgetary item in NASA is, at present, STS,
>NASA still bosses the unmanned spacecraft flights which
>includes the DSN or Deep Space Network for bringing in data
>via radio from unmanned craft. NASA continues with space
>research in materials, techniques, testing for both space and
>aeronautics (aeronautics is the second "a" in NASA).

No, Your Foolishness...The second "a" in NASA is "Administration".

Details, you idiot...details...That's why you hardly ever get it
right...You don't pay attention, even to what YOU write. That's why you can't
scam your trash in here without severe criticism.

>The third hurdle is "incorporate." By dictionary definition,
>"incorporate" means to "combine, include, embody" or to
>"combine together in a single whole, merge." At *NO* time
>was NASA or USAF BMC or USA space efforts (Huntsville,
>AL) ever dependent on amateur radio to fulfill any
>missions, flights, or test programs.

I know asking you to substantiate your assertions is foolhearty, but I will do it only so that others can see your reluctance to back up even your own stupid assertions....WHERE did I or anyone else SAY that NASA had ever been "dependent" on Amateur Radio to fulfill any mission criteria???

Also, I note that the design and installation of ARISS system antennas IS an integral part of ISS design. Ergo ARISS >>IS<< incorporated to the International Space Station. This is further substantiated by the issuance of callsigns TO the ISS by several of the nations who underwrite the ISS, therefore the operation of Amateur radio in space is recognized as important by more than on national government.

>> Also...for those (or "the one") who always whine about how little
>>Amateur radio get's any media exposure, here's another prick in the balloon.

<snip of IMAX blurb>

>IMAX cannot be shown in conventional motion picture theaters, only at
>certain theaters. There are now more motion picture theaters fitted for
>new digital forms of conventional movies than there are IMAX theaters
>in the USA.

Which still does not negate the fact that MILLIONS of people (per IMAX accounts of visits-per-year) will see IMAX presentations every year....And not "only" in the United States, mind you...

>The unfortunate fact (for amateur radio publicity) is that exposure of
>ham radio to the US public is almost nil in all popular media.

But NOT as "nil" as the amount of exposure as Lennie the Loser has.

>It should be fairly obvious that NASA requests some astronauts to
>get amateur radio licenses for NASA publicity purposes, not to
>advance or sponsor amateur radio activity. NASA must continually
>seek all avenues of public awareness of its expensive programs to
>remain a part of the US government's various programs.

NOW I GET IT! it's just a PUBLICITY STUNT! Kinda like pole sitting or wing walking!

Suuuuuuuuure, Lennie! NASA has nothing better for it's flight staff to do than pass Amateur Radio examinations for "publicity"...As if walking in space and creating orbiting laboratories isn't enough. It's a well known fact that most Americans don't lend ANY credibility to ANY astronaut that doesn't hold an Amateur license....(coughcough..snickersnicker...Suuuuure Lennie!)

Of course I guess YOU would be the one to find some "negative" side to programs like ARISS that allow some form of direct communication between the crews and school children...Nothing like spoiling the minds of kids who might have otherwise wasted thier time on useless pursuits like aerospace engineering, medecine, etc, huh, Lennie...???

>"ARISS in action" as a phrase is part of the usual self-promotional
>spin done by the ARRL. That's fine for amateur radio but means
>absolutely nothing for NASA...(SNIP)

But...but...but...LENNIE! Above you just claimed it was a publicity stunt for NASA...I ASSUME that you meant that it was intended to create some sort of positive reaction by the unwashed masses towards an otherwise expensive program.

If THAT was the intent, then it very certainly DOES mean "something" to NASA!

>or the STS since they have their own
>infrastructure for communications, tracking, data retrieval in at least
>a three-tiered backup system for STS or any other program.

The use of Amateur Radio to communicate directly with the now decommissioned MIR and STS missions was widely published. It is a fact. it happened. Guess good-old simplex FM voice STILL has a place in radiocommunications, huh, Your Foolishness?

> Ham
>radio from the ISS or STS is an on-going publicity program, a part
>of NASA and the space agencies of the other 15 nations in the ISS
>consortium. Ham radio is NOT a "vital part" of space programs.

Again....You are asked to cite WHO (other than YOU) said it "was" a "vital" part of the program, Lennie.

Do you go out of yourway to LOOK bitter, Lennie? If so, you are doing a good job.

1660. A Moment of Silence On 11 Sept 2002?

Steve Robeson, K4YZ

QUOTE:

September 11, 2002 Radio Silence
Ray J. (AC5KD) on April 14, 2002
View comments about this article!

I am just as saddened and angry at the events of September 11th as anyone is. On the afternoon of the 11th, I went to get the largest American flag I could find so that I could drive with it flying above my truck. I attached the flag to a pole, and then bound the pole to my High Sierras screwdriver antenna, which is in the bed of my truck, so that I could fly our flag up high as I drove from city to city. That is what I did to honor the victims of the 11th, as well as to demonstrate my unstoppable surge of patriotism that we all felt that day.

As ham radio operators, we are daily ambassadors to the rest of the world. We set examples of how Americans truly feel, think, and act, when we speak of our ways over the radio. For some people, ham radio is their only way to get a true sense of how Americans are. I have many friends around the world, and I am very intent on showing as many people as possible, how the events of September 11th have brought our country together, and how it did not weaken us, but strengthen us.

I would like to ask American ham radio operators to help me to show the world how unified and patriotic we can be; how we honor our American brothers and sisters, and how serious we are about September 11th as a nation. On September 11th 2002 at 8:45 am, I would like to propose a few moments of radio silence on all amateur bands, by all American radio operators who wish to make a statement to the rest of the world. I know there will be moments of silence made by thousands of people at that time, so let us make ham radio a part of that. The world will remember those who died as they hear our moments of silence, as we pay our respects to the victims of the terrorists. The world will see a unified and enormous demonstration of American devotion and pride for our country. They will know why we are called the United States of America.

Thanks to all, Ray AC5KD

Then why don't you practice what you preach, Kim?

Your radio sets have a tuning knob and a power switch. But when someone
shows up on the repeater you frequent and talks about traffic conditions, you
"chide", "tease" "make fun of them" "bust their ....", etc. rather than tuning
away
or turning off. You've told us you do these things, so your saying "do as I
say, not as I do".

If you liked that, you may like what happened two years later....

Back then, one of the requirements for Extra was two years' experience
as a
General or higher. So exactly two years after getting the Advanced I
was back
at the FCC office to try the Extra. Exams were only Monday-Wednesday,
8 AM
sharp. 30 days' mandatory wait to re-try if you failed anything. As a
16 year old highschool kid, I knew that a failure would mean waiting
for Christmas or
even the next summer for another go.

There was a pretty large group waiting in the anteroom of the office
on that August morning. At precisely 8:00 AM The Man comes out and
asks "anyone for 20 wpm code?" Just one hand went up - mine. I
followed The Man into the exam room.
Code tests were given at a long table at one end of the exam room.

He explained the code test procedure: "Write what you hear on this
paper with this pencil. You get exactly 5 minutes and when the code
stops, put the pencil
down. You need 100 or more consecutive correct characters to pass."

The code came from a small machine that read a punched paper tape and
fed sets of headphones. Code speed was set by changing drive spindles
of various diameters in the machine. The Man loaded the machine, told
me to put on the phones and started the machine.

The code was LOUD in the 'phones and I started right in, putting down every letter in big block printing. It was easier than I expected - I was getting every letter with no problem! The Man watched closely, then came around behind me and watched over my shoulder as I copied. Then he went over to the machine, looked at it carefully, and abrupthly shut it off.

"Pretty easy, huh, kid"? he asked.

"Uh, yeah" was all I could mumble.

"It should be. That was 13 wpm. Here's 20".

And he quickly swapped drive spindles, restarted the machine, and the real test began.

Yes, I passed. Also the 20 wpm sending and the written, and then home to wait for the mailman.

Did he just forget, or was he rattling my chain a bit? I'll never know.

>Did he just forget, or was he rattling my chain a bit? I'll never
>know.

I can't imagine that anyone who regularly administers those tests would not have been able to tell readily that the code speed was wrong. When Mike Tracy, the Lab's current test engineer, was the W1AW night/weekend op, he couldn't copy much above about 15 wpm, but could easily tell whether the code speed was correct.

Well, in 1997 I bought a Swan 350 for $165. In 1998 I sold it for
$200 and bought a Kenwood TS-520. After buying an external VFO-520
for $75, I turned around and sold THAT combination for $300 and bought
myself an IC-720A. So actually, yes... we CAN sell our equipment at
a profit - provided we bought it for a bargain to begin with...

I don't know if it is exactly a "hang-up", Kim. There might be anyone listening on the other end, and they might have any sort of standards for language. We have some 9 and 10 year old hams in our area. I certainly don't want to be responsible for enlarging their vocabulary in that direction. So it is a matter of proper manners at least to keep the language clean. I hope we don't swear in front of little kids - and little kids are listening to the radio.

> At any rate, you wouldn't want to be at one of our dinners, then, because we
> let loose in person... ;)

Now that's a different matter entirely. I have occasions that I have to get the "attention" of one of my hockey team members, and I can blister their ears with the profanity. There is a time and place.

Amateur Radio Newsline™ Report 1287 - April 12 2002

(Note: Producer Bill Pasternak, WA6ITF is away on business this week. ARNewsline™ Report 1287 was produced and recorded in New Orleans Louisiana by Don Wilbanks, KC5MFA)

Amateur Radio Newsline report number 1287 with a release date of Friday, April 12th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Another threat to the 2.4 Gigahertz band. This time it comes from the FCC. That story is first on Amateur Radio Newsline report number 1287 coming your way right now.

(Billboard Cart Here)

**

RADIO LEGISLATION: FCC PROCEEDING PUTS NEW PRESSURE ON AMATEUR MICROWAVE BAND

The FCC has again targeted Amateur Radio's primary allocation at 2390 to 2400 MHz for possible sharing or use by other radio services. Newslines Norm Seeley, KI7UP, has the details:

--

According to the ARRL Letter, a Notice of Proposed Rulemaking known as WT Docket 02-55 has been presented by the FCC. The Letter says that it invites comments on either sharing the 2390 to 2400 MHz band with public safety services being displaced from 800 MHz or moving amateurs elsewhere.

The N-P-R-M identifies 2390 to 2400 MHz as an "Unlicensed P-C-S Band." Unlicensed, asynchronous P-C-S devices were authorized there in 1995, but Amateur Radio remains primary.

Why the action now? The FCC says that its receiving an increasing number of reports of incidents of harmful interference to public safety systems in the 800 MHz band. To alleviate the problem, the Commission now is looking into restructuring 800 MHz and moving some occupants elsewhere. And 2390 to 2400 MHz could be where those users get moved.

But says the FCC, that’s only one piece of spectrum being considered. One place its not looking is the adjacent 2385 to 2390 MHz band. The FCC says it can’t consider 2385 to 2390 MHz because that part of the band is slated to be auctioned off.

This is the second threat to the ham radio allocation in less than a year. Just last summer, the FCC invited comments on its proposals to reallocate some

spectrum in the 2390 to 2400 MHz amateur segment for possible use by unspecified mobile and fixed services. The Commission has also proposed 2390 to 2400 MHz and other bands to support the introduction of advanced wireless systems, including so-called third-generation or 3 G mobile systems. The FCC also has asked for comments on whether amateurs could share the band with government users.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

WT Docket 02-55 was released in mid-March but not yet available for public response. The FCC will officially invite comments for 30 days after the NPRM is published in the Federal Register. Reply comments will be due 60 days following publication in the Federal Register. The ARRL says that it plans to file comments in this proceeding. (ARRL)

**

RADIO LAW: FCC MAY MANDATE FASTER CONVERSION TO DTV

Federal regulators may look for ways to mandate faster transition to all-digital television if the TV industry fails to move quickly enough on its own. This, according to a Federal Communications Commission official speaking on Friday April 5th.

The comments are from Ken Ferree, chief of the FCC’s Media Bureau. And what he has said adds emphasis to a proposal by the agency's chairman that aims to bring digital TV to more American viewers.

FCC Chairman Michael Powell has challenged everyone involved in the digital conversion, including television networks, local network-affiliated stations, cable and satellite service providers and equipment manufacturers to voluntarily meet a series of goals on the way to a 2006 deadline.

Accordng to Ferree, Powell’s proposal, which was sent to Capitol Hill and the industry on Thursday April 4th is an effort by the FCC to pressure the industry into voluntary compliance. He says that Chairman Powell believes exposing more consumers to the technology of digital television will stimulate them to demand more and thus jump-start development. (Published report)

**

FCC TO UTILITY: STOP INTERFERING WITH HAM RADIO

The FCC has told GPU Energy Corporation of Morristown, New Jersey to clean up the harmful interference that the utility is causing to several area radio amateurs. In a letter to GPU Energy the FCC said that incidental interference from its Part 15 devices to operations of authorized stations cannot be tolerated and that use of the devices cannot resume until the harmful condition is corrected.

According to the W5YI Report, those hams complaining have been unable to find a satisfactory remedy through the GPU complaint resolution process. They turned

to the FCC which investigated. Now the FCC has told GPU that unresolved interference complaints may constitute a rules violation that could lead to fines. The FCC urged GPU Energy to contact the ARRL for advice in resolving the issues. (W5YI)

**

INDUSRTY NEWS: NEW DEALER & MANUFACTURERS GROUP FORMED

During the informal annual industry meeting of Amateur Radio manufacturers held in Milwaukee, Wisconsin and hosted by AES during Superfest 2002, the industry decided to create a formalized and official industry group for dealers and manufacturers.

The American Association of Radio Enthusiasts (AARE) was formed as a non-profit corporation for the promotion of amateur radio and emergency communications into areas outside of amateur radio and to provide a conduit for dealers and manufacturers to exchange ideas, to work together on projects, to help ham radio grow and to double the number of hams in 5 years.

Members of this group will be the manufacturers and dealers of radio and emergency products. The group will be ‘the voice’ of the manufacturers and dealers in radio, much like the American Radio Relay League is the voice of each ham radio operator. (AARE)

THE CONVENTION SCENE: HAMFESTS ARE SAFE

The ham radio convention season is in full swing, but some radio amateurs are asking if it’s safe to attend them. President Bush says that we have to put 9/11 behind us and all Americans have to resume normal life. Most of us have, and the shows are going on. But regardless if it’s the OSCARS or a tiny hamfest, event planners are now taking a closer look at show security. This includes the giant Dayton Hamvention. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, looks at what they are doing to keep you safe as you enjoy ham radio’s greatest show on Earth:

--

If you travel by air, or even visit your local police department, you have seen heightened security measures in place since the terror attacks of last September 11th. And while nobody expects an al-Quida sponsored assault on a hamfest, law enforcement and planners of even the smallest events cannot dismiss the possibility either.

A few weeks ago, the Dayton Hamvention mailed out a promotional flyer. One of the items it contained was an area dealing with show security. In reality, what was shown is nothing more than an update to what's been in place for several years, but as the magic weekend of May 17th to the 19th approaches, its important to take a look at what the Hamvention will be doing to make your stay safe and secure.

The rules in effect are the same we have all been living with since 911. Be prepared to show photo I-D upon request. Also be prepared to have vehicles, merchandise and personal items searched. This may be especially true of large containers such as backpacks.

Do you carry a weapon for self protection? Sorry, but no weapons will be permitted into the area. Hamvention says that even applies if you have a license to carry a concealed weapon. Leave the weapon at home. You won't be permitted in with it.

Nor can you bring in any ammunition, explosives, chemical or incendiary devices. Also banned are alcoholic beverages, drugs and burglary tools.

This year there will be tighter scrutiny of vendors as they bring truckloads of merchandise into the flea market and exhibit halls. Since most of you will arrive well after merchandise is in place, this will have little impact on the average attendee.

And very important. Everyone must display at all times, so it's clearly visible, a Hamvention badge or ticket.

For the Amateur Radio Newsline, I'm Henry Feonberg, K2SSQ.

--

Garry Matthews, KB8GOL, is Executive Director of Hamvention 2002. He recently told CQ Magazine that the planners are trying to take common-sense precautions to provide security for a show of this size. Matthews adds that 99% of Hamvention attendees will not notice anything different from past years. The most important thing is to know that Hamvention 2002 and every other ham radio show is doing everything to keep you safe. (CQ)

**

THE CONVENTION SCENE: NO BIG ACTS AT HAMVENTION 2002 BANQUET

Speaking about Hamvention 2002, the planners say that you have spoken. As a result there will be no big name acts at this years grand awards banquet. Jim Graver, KB8PSO, is the General Chairman of Hamvention 2002:

--
Graver: "This year we are returning to tradition of years past and will not have a post banquet entertainment."
--

A few years ago, the Hamvention added concerts by top talents to its famed Saturday night gathering. Among those who have appeared are Joe Walsh and the Smothers Brothers. And even though the entertainment has been well received,

there has been a call from the ham community to get back to basics. And says Graver, so it shall be.

--
Graver: “We have gotten feedback from our attendees saying that they would like to have the same banquet that they used to have years ago. So, in 2002, the Hamvention is going to deliver just that: A banquet with great food, a celebration of the award winners, fantastic guest speakers and of course prize drawings.”
--

Jim Graver has a lot more to say about Hamvention 2002 and what will be happening this year. You can hear it in Part 2 of Hap Holly’s exclusive interview with KB8PSO. Just take your web browser over to www.rainreport.com and click on this weeks special. Or call area code 847-827-7246. That’s 847-827-R-A-I-N. (ARNewsline(tm))

RADIO LAW: DIREC-TV SUES RADIO PERSONALITY OVER ALLEGED SIGNAL PIRACY

DIREC-TV Inc. is taking a New York City radio personality to court. This as it files suit against WFAN radio personality Sid Rosenberg alleging he violated the Digital Millennium Copyright Act and the Federal Communications Act by stealing its programming.

DIREC-TV says that on March 11th, while talking with Don Imus on the "Imus in the Morning" show on MSNBC, Rosenberg allegedly said he had used an illegally modified access card to steal DIREC-TV.

Although air personality Imus is said have told him what the was doing is "dishonest" and constitutes "stealing," Rosenberg allegedly continued to "boast" about using the illegally modified access card to watch movies and sports.

DIREC-TV says that with this lawsuit it is sending Mr. Rosenberg a very clear message. One that says using an illegally modified access card to receive DIRECTV programming is stealing and it violates federal law. Larry Rissler, vice president of DIREC-TV's Signal Integrity office adds that the company has a transcript of the program and what he calls Mr. Rosenberg's brazen comments on national television of stealing DIREC-TV programming. (DIREC-TV release)

NAMES IN THE NEWS: STEVE DIMSE K4HG HONORED BY NOAA

The National Oceanic and Atmospheric Administration has named Steve Dimse, K4HG, of Tucson Amateur Packet Radio, as recipient of one of its Environmental Hero Awards for the year 2002. Dimse, of Cudjoe Key, Florida is being honored for his volunteer efforts in real-time citizen weather observations.

The data collected by Dimse and other volunteers is used for numerical weather prediction research at NOAA's Forecast Systems Laboratory and for training and research at the National Center for Atmospheric Research. In Florida, the data

is used by National Weather Service’s Weather Forecast Offices for local area prediction. It is also used at Kennedy Space Center for weather prediction in support of launch operations.

Each year the agency presents a number of Environmental Hero Awards to people who don't work for NOAA, but have contributed a great deal to NOAA's ongoing job of providing environmental services to the citizens of the United States. For 2002, Dimse was one of five people chosen for this honor. (NOAA)

**

NAMES IN THE NEWS: GM3ITN INVITED TO FAULKLAND ISLANDS

Les Hamilton, GM3ITN, has been invited by the Falkland Islands government to visit the islands for the 20th anniversary of their emancipation. Hamelton played an important role in making the liberation happen. Jeramy Boot, G4NJH, has more.

--

It was Les Hamilton who first informed the UK government that the islands had been invaded. On the 2nd of April 1982, he received first-hand reports that the Argentine flag was flying over the islands. Les was therefore the first person outside the islands and Argentina to know that an invasion had taken place. He phoned the Ministry of Defense, who informed then Prime Minister Margaret Thatcher.

GM3ITN remained in contact with VP8 stations even during the period of occupation, passing vital information on to the MoD. Les and his wife Pilar also intercepted Argentinean radio communications, which Pilar - a university lecturer in the Spanish language - translated for the MoD.

Jeramy Boot,G4NJH.

--

The Hamiltons will be flying to Port Stanley for the 20th anniversary celebrations which take place on June 14th. Until recently, Les Hamilton's role had been a closely-guarded secret, known only by senior British politicians, military intelligence officers and a select group of radio amateurs. (GB2RS)

HAMVENTION 2002: THE HARA ARENA STORY

Earlier in this weeks newscast we spoke about plans for this years Dayton Hamvention. As most of you are aware, Dayton’s HARA Arena has been the home of the Hamvention for many years. As a result the HARA has become as famous as the show it hosts. But there’s a lot more to the HARA story than just the Dayton Hamvention as we learn from Amateur News Weekly’s Jack Parker, W8ISH:

--

The HARA Complex is as unique as its history. In 1956, a dance hall called the Wampler Ballarena was built as the cornerstone of what is now a six building exhibition center. Originally, the location was a thriving, family-owned fruit orchard. Today it is a thriving, family-owned entertainment, conference and exhibition facility.

Very few entertainment complexes are privately owned. Even fewer are family owned. You see HARA was named by founding brothers Harold and Ralph Wampler. The arena building, built in 1964, ushered in entertainment to the Dayton area never seen before. The Rolling Stones, Elton John, The Who, Neil Diamond, The Beatles, The Grateful Dead have all played at the facility.

The HARA has survived and prospered by combining the professionalism of one of the areas largest exhibition centers with the care and personal concern of a family business. Because of this the HARA has been the catalyst to successful hockey in Ohio's Miami Valley. The Dayton Gems and later, the Dayton Bombers, have both enjoyed success while on the HARA ice. But, most agree, the one event that has put HARA ARENA on the map worldwide, is the Dayton Hamvention. It’s where the Amateur Radio Community and a family owned business meet to carry on a wonderful tradition.

For Amateur News Weekly, Im Jack Parker, W8ISH

--

Today, the HARA Arena remains the home to many high profile events for the Dayton area. This includes Disney On Ice, Sesame Street Live, the Silver Sticks Hockey team and of coarse the Dayton Hamvention. And, contrary to rumors on the Internet, the Hamvention says that it’s there to stay. (ANW)

**

EMBARRASSING TECHNOLOGY: SPYWARE DEBACLE DISCLOSED

Call it a gotch’ya. This as thousands of Internet users who thought they were installing a program for sharing music and other computer files apparently accepted a program at the same time that tracked their Web surfing habits.

The tracking program, or spyware, linked Internet users to an on-line sweepstakes game called Click-Till-U-Win. But the site was also collecting data on other recent cyberspace visits by the surfer’s computer.

Spyware is a clandestine computer program downloaded to your computer without your knowledge that can track your Internet-surfing habits without your consent. These types of programs exist in the open elsewhere on the Internet, but in this case there was no disclosure and no option to reject.

Now at least three companies are posting new versions of their software on the web without the tracking programs. And one of the web sites is actually offering visitors to its site an apology. (Computing Technology)

**

INTERNATIONAL - UK: BRITISH HAM RESCUED BY HAM RADIO

Turning to international news, word that a ham radio operator and his wife on board a yacht that ran aground have been rescued. This, thanks to the efforts of radio amateurs on the Maritime Mobile Service Net.

According to reports from the ARRL and GB2RS, Dave Beane, G0TAG, and his wife Sara, were aboard the pleasure craft Tao when it ran aground on a reef off the north coast of Cuba on the 26th of March. Apparently their initial call for assistance to the Cuban authorities had no response.

So they turned to ham radio and the 20 meter Maritime Mobile Services Net. Radio amateurs in the United States and in the Virgin Islands were able to alert the authorities in Havana via the US Coast Guard and the Swiss Embassy in Washington. Later reports via amateur radio indicated the couple had been rescued and that efforts to salvage the vessel were under way. (ARRL, GB2RS, Q-News)

**

SPACE AND SCIENCE: SPACE REFERIGERATOR

SpaceDaily reports that when Space Shuttle Endeavour blasted into space recently it carried aboard the world's smallest version of a relatively new type of refrigerator. Called a pulse-tube cryocooler, the device was designed, built and tested under an agreement between the National Institute of Standards and Technology's Boulder Laboratories, Lockheed Martin Corporation and NASA's Ames Research Center. (ANS)

A NEWSLINE FOLLOW-UP: A POLITICALLY DISORGANIZED 11 METER CLASS D SERVICE - PART 3

Over the past two weeks, Amateur Radio Newsline’s David Black, KB4KCH, has been looking at the not so political side of 11 meter Class-D C-B. In this third and final installment, David explores the reasons that there is little chance of C-B ever becoming a major two way radio political power:

--
The Citizens band radio service has a unique distinction. For all the years it has existed...for all the people who have bought and used 11 meter radios...for all of the public exposure CB has obtained TV, radio and the movies, 11 meter Class D C-B remains the only major radio service in the U-S without political representation in Washington. No support either before the FCC or Congress.

In the mid 19-70s, the Government held conferences to find better ways to use C-B. Today's Government leaders give it no attention. Congress and local governments are tired of consumer complaints against C-B operators running illegal power and who interfere with all sorts of consumer electronic gear. As a result, federal regulations are now in place that give almost any law enforcement official the ability to shut a C-B operator down. The C-B operator can appeal, but it is a long, and costly process.

So why is nobody on 11 meters seriously attempting to organize users of the band? As one former CB enthusiast suggests: Perhaps it's the sheer diversity of the CB radio community. CB has over-the-road truckers, sidebanders, emergency monitors, numerous private nets, the occasional family highway trip, and the usual assortment of troublemakers. Each of these groups operate separately and independently of the others with apparently little knowledge or regard for other uses of the band.

Whatever the real reason or reasons, one simple fact remains. When it comes to having a voice before the FCC and Congress, CB radio is out in the cold. Chances seem slim it will ever have such a voice. And without that, C-B operators like Gary D. White in Illinois are likely to continue to face Disorderly Conduct charges for disturbing anyone by transmitting on the 11 meter Class D Citizens Band.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

In closing, a word to those who have written. Some with questions. Other to add their own commentary. We sincerely appreciate your taking the time to write. You perspectives have been included in this final wrap-up. We thank you for your help in telling the story. (ARNewsline)

He wasn't wearing the 'phones - I was. I don't know if he could hear
it.

However, I would not put it past ol' Joe Squelch to do something like
that just so there'd be no doubt that a kid with an Extra knew his/her
stuff cold.

That was August, 1970, Philadelphia Custom House at 2nd and Chestnut
Streets, 10th floor.

I think it was Mike who gave us the Hq. tour back in '93.

Tell the rest of the story, then, and the context.

The issue was the use if multiple choice code tests. And the date was 1992,
when FISTS had less than 1000 members, about 350 of them in the USA.

In article <20020417051223.13104.00004517@mb-ct.aol.com>, someone writes:

>>> For those who like to moan and whine about Amateur Radio's death
>throes,
>>>I can't help but wonder how they rationalize thier rants when NASA, the
>most
>>>conservative of any technology based agency in the world, see's fit to
>>>incorporate it into it's multi-billion dollar pet.
>
> Lennie the Loser retorts:
>
>>Heh. The first hurdle in trying to decipher the above is to get over "most
>>conservative," a ludicrous description...except to those never having
>>worked in any part of the US space program.
>
> NASA is >NOT< conservative in it's practices? It is >NOT< conservative
>in it's technical tolerances nor whom it allows to fly in it's spacecraft?

Space flight is definitely NOT for everyone. NASA's policy is
not to accept anyone or to take risks with astronaut's lives.

STS 51J (Challenger) had a flaw in basic human judgement on
a lower management level that allowed a faulty condition to
continue. The investigation that followed resulted in some
drastic changes in policies and procedures, including dismissal
of some NASA personnel directly involved. Challenger had
already flown 7 times before the final tragedy.

> Geez, Your Putziness...I didn't think THAT required any "deciphering".

You cannot apply "conservative" to spaceflight in terrestrial terms.
Micro-gravity is not a normal human environment. One out of three
trained, sometimes experienced astronauts suffer some form of
space sickness at the beginnings of micro-gravity. The majority of
humans simply cannot tolerate micro-gravity for more than a few
seconds; that's the reason for the specially outfitted military 707
dubbed the "Vomit Comet." It weeds out the incapable from those
that might survive.

You cannot take ordinary terrestrial construction electronics and
expect all to survive in micro-gravity. Circuit boards and exposed
conductors must be coated or sealed to prevent "floaters" of
tiny conductive debris from shorting out adjacent conductors.

>>The next hurdle in understanding is "multi-billion dollar pet,"...
>

> Only you required any assistance there, Lennie.

The Apollo "moon rocket" program was the most expensive
program directed by NASA. Apollo has long been cancelled.
Shuttle cost less. Shuttle continues and the long-term
budget expenditures in total are now more than for Apollo.

>>via radio from unmanned craft. NASA continues with space
>>research in materials, techniques, testing for both space and
>>aeronautics (aeronautics is the second "a" in NASA).
>
> No, Your Foolishness...The second "a" in NASA is "Administration".

I mistyped the parenthesis statement, intended to say
"aeronautics is the second LETTER in NASA."

NASA = National Aeronautics and Space Administration.

> Details, you idiot...details...That's why you hardly ever get it
>right...You don't pay attention, even to what YOU write. That's why you
>can't scam your trash in here without severe criticism.

Heh heh heh...the little monkey's fists are clenched so tight,
the clenching extends to teeth clamped shut in anger!

If one were to make an "issue" of typos, the little monkey would
lose by a wide margin since it makes so many of them.

>>The third hurdle is "incorporate." By dictionary definition,
>>"incorporate" means to "combine, include, embody" or to
>>"combine together in a single whole, merge." At *NO* time
>>was NASA or USAF BMC or USA space efforts (Huntsville,
>>AL) ever dependent on amateur radio to fulfill any
>>missions, flights, or test programs.
>
> I know asking you to substantiate your assertions is foolhearty, but I
>will do it only so that others can see your reluctance to back up even your
>own stupid assertions....WHERE did I or anyone else SAY that NASA had ever
>been "dependent" on Amateur Radio to fulfill any mission criteria???

That was in the implication by use of the word "incorporate."

> Also, I note that the design and installation of ARISS system antennas
>IS an integral part of ISS design. Ergo ARISS >>IS<< incorporated to the
>International Space Station. This is further substantiated by the issuance
>of >callsigns TO the ISS by several of the nations who underwrite the ISS,
>therefore the operation of Amateur radio in space is recognized as important
>by more than on national government.

Error! Tsk, tsk, tsk. The last line should be "by more than ONE national..."
:-)

Ham radio on shuttle was of the "shack on a belt variety," getting
a handheld next to a large window. The ISS is largely enclosed by

conductive structures with no "picture window" viewports, only
relatively small apertures suitable for image recording apparatus
(cameras to ordinary mortals). Amateur radio on the ISS requires
power (that power is limited), a means to carry the RF into/out-of
the skin of the ISS, and an antenna location that does not interfere
with anything else that IS vital to the ISS. In addition, the EMI from
any such space "ham shack" cannot interfere with regular ISS
communications or telemetry. All that was pre-planned on the
ground and the extra payload mass accounted for (all payload
mass is precious).

ISS planning is for long durations of research crews who will live
in space for months at a time. Crew planning is to allow all to
have some form of recreation when not being required to work on
projects. It can be reasonable to assume that amateur radio
facilities, albeit quite limited, serve the following purposes:
Recreation coupled with some limited publicity of such
recreation for showing that the consortium's member nations
are doing more than spending money on a seemingly-useless
project (no direct benefits to terrestrial life).

>>IMAX cannot be shown in conventional motion picture theaters, only at
>>certain theaters. There are now more motion picture theaters fitted for
>>new digital forms of conventional movies than there are IMAX theaters
>>in the USA.
>
> Which still does not negate the fact that MILLIONS of people (per IMAX
>accounts of visits-per-year) will see IMAX presentations every year....And
>not "only" in the United States, mind you...

How many IMAX theaters are there? Count them up and relate tham
to "conventional" motion picture theaters. IMAX is still quite limited
and in only a few urban centers.

>>The unfortunate fact (for amateur radio publicity) is that exposure of
>>ham radio to the US public is almost nil in all popular media.
>
> But NOT as "nil" as the amount of exposure as Lennie the Loser has.

...try to stay on the subject or at least part of the subject. The above
is nothing but the usual gratuitous heckling signifying nothing but
the monkey's psychological aberration..

>>It should be fairly obvious that NASA requests some astronauts to
>>get amateur radio licenses for NASA publicity purposes, not to
>>advance or sponsor amateur radio activity. NASA must continually
>>seek all avenues of public awareness of its expensive programs to
>>remain a part of the US government's various programs.
>
> NOW I GET IT! it's just a PUBLICITY STUNT! Kinda like pole sitting or
>wing walking!

Both "pole sitting" and "wing walking" were private showmanship
publicity stunts done beginning in the Great Depression times.
The monkey was born in the mid-1950s, well after that fact.
"Wing-walking" is still an activity done at air shows. Air shows
are almost all private endeavors designed for entertainment.
The analogue is rejected.

> Suuuuuuuuure, Lennie! NASA has nothing better for it's flight staff to
>do than pass Amateur Radio examinations for "publicity"...As if walking in
space
>and creating orbiting laboratories isn't enough.

Most astronauts granted an amateur radio license hold a no-code-test
Technician license. They are all knowledgeable about the general
fields of technology and the specifics of a few dozen questions on the
Technician license test would be simply another technical work task
to learn in the hundreds of hours of preparation common to all
astronauts. Part of the "preparation" includes classroom work on how
to present a "positive image" of their space assignments (tone down
remarks on spacesickness or micro-gravity waste elimination tasks).
There is no problem in their "classroom work" on getting qualified
instructors on radio or even radio fundamentals; astronauts use NASA
radios as part of their communications with the ground. Amateur radio
is simply an extension of normal radio in space.

"Walking in space" (being in a vacuum environment in a spacesuit
which has been engineered by others over a quarter century of such
environmental exposure) is no longer a "new" thing. Alexei Leonov
did that first in March 1965, Ed White was the first American to do so
in June 1965 (Gemini 4, both he and spacecraft commander Jim
McDivitt had to wear full space suits due to Gemini capsule
configuration). Creating orbital laboratories is done on the ground
first and has been an integral part of nearly all Mercury, Gemini,
Apollo, Soyuz, Apollo-Soyuz, and Skylab flights from the beginning.
This is essential since micro-gravity cannot yet be fully simulated
on the terrestrial surface.

Between April 1961 and October 2000 there have been 133 manned
spaceflights and 4,901 separate payload flights (each payload a part
of a rocket flight). Manned spaceflight is 41 years old this month and
no longer a novelty in itself.

>It's a well known fact that
>most Americans don't lend ANY credibility to ANY astronaut that doesn't hold
>an Amateur license....(coughcough..snickersnicker...Suuuuure Lennie!)

Irresponsible claim. No such thing.

> Of course I guess YOU would be the one to find some "negative" side to
>programs like ARISS that allow some form of direct communication between the
>crews and school children...Nothing like spoiling the minds of kids who might
>have otherwise wasted thier time on useless pursuits like aerospace
>engineering, medecine, etc, huh, Lennie...???

There should be nothing at all negative about amateur radio as a
form of both recreation and entertainment and information for
school children, but that is largely restricted to individual schools
and some classrooms therein when a ground amateur is available
to demonstrate. There is NO wide exposure to such amateur
communications with space.

NASA has made available a wealth of information on all aspects of
spaceflight and associated technologies to schools and teachers
since the days of Apollo-Soyuz. Those explain FAR more about
aerospace engineering, space medicine, and other technologies to
far more school children than some transient event of having a class
"talk to someone in space." That material is available to ordinary
mortals (non-teachers) through the US Government Printing Office
for a very low price.

>>"ARISS in action" as a phrase is part of the usual self-promotional
>>spin done by the ARRL. That's fine for amateur radio but means
>>absolutely nothing for NASA...(SNIP)
>
> But...but...but...LENNIE! Above you just claimed it was a publicity stunt
>for NASA...I ASSUME that you meant that it was intended to create some sort
>of positive reaction by the unwashed masses towards an otherwise expensive
>program.

That seems to be the intent. It has no other purpose than being
PR and a form of recreation for ISS crew members.

> If THAT was the intent, then it very certainly DOES mean "something" to
>NASA!

Wrong conclusion based on not understanding the aims and general
structure of the ISS mission.

There are physical limitations to the mass of the ISS, electrical power
demands, internal heat dissipation, plus EMI from "other" radio
equipment that must be met. Such is not "conservative" as in a
difference between conservative and liberal, but just a physical fact of
life in an orbital space environment.

> The use of Amateur Radio to communicate directly with the now
>decommissioned MIR and STS missions was widely published.

MIR was not "decommissioned." It was abandoned and burned
up in the atmosphere in the Pacific (video was widely publicized
at the time). STS is still on-going and is the prime-mover for parts
supplies, and crew relief for the ISS. STS is expected to live on
past 2008.

The "use of amateur radio" on STS was only "widely published" in
the specific amateur radio media. The public is well aware of the
normal NASA radio communications with shuttle through hundreds
of available video and audio feeds live and on-line since the first
Mercury in May of 1961.

>It is a fact. it
>happened. Guess good-old simplex FM voice STILL has a place in
>radiocommunications, huh, Your Foolishness?

There was never any dispute on modes. Since Shepard's first Mercury flight, voice communications started with AM using what amateur's call "VOX" (to avoid the need for push-to-talk) with ground-space return to make it "semi-duplex." In various configurations of capsules over several programs this was shifted to FM and forms of pulse modulation to digitized voice. At the same time there was personal medical telemetry on a separate circuit plus telemetry of the capsule on another radio circuit. The Apollo LEM-command-module combination had digitized voice and telemetry in a sort-of duplex arrangement with pseudo-random noise added to improve the signal-to-noise ratio.

> Again....You are asked to cite WHO (other than YOU) said it "was" a
>"vital" part of the program, Lennie.

Use of the word "incorporate" in the first monkey posting indicates an implication that it was so.

Amateur radio in space is a voluntary effort by amateurs and an essentially-free-ride for amateur radio in general since the various agencies give free payload space. The payload costs are enormous and the entire world amateur radio "community" ought to be very grateful for anything boosted into orbit by any space agency. It is my opinion that amateur radio organizations have no right whatsoever in even implying that amateur radio is "vital" to any space mission.

ANY amateur radio equipment carried into space, any mission, is a freebie given by the various space organizations. Be grateful for, not boastful about such gratuities.

Man, that sounds like a blast. You know, it may be a little controversial, but you could even do a "show" with interviews of hams who stormspotting, DXpeditions, build gear, etc. How 'bout one called "Hamming ISN'T all Radio." Why? Because there's topics that some (LOL) hams know a lot about, like grounding for example. A show on grounding could interest nearly anyone, and could end up getting them interested in ham radio...

If I was willing, and I have been on occasion, to do any cursing on the air, I'd use damn *and* hell...but probably not much more than that. I also wouldn't talk out loud about speeding, if I am, or anything that could be misinterpreted by an impressionable mind. I don't think ham radio is the place to announce that we are doing illegal things. Cursing and kids...that's a touchy subject. Around here, you ought to hear some of the language I've heard coming out of little kids' mouths--WHEW!

writes:

>> It had nothing to do with convenience, Ed. I simply didn't observe
>> a call sign badge on her, and she did not identify herself by name
>> or call sign at any time during her tirade.
>>
>
> And those mortified HQ folk, desperate to end this scene, didn't ask
>her to ID.

Dick:

There were no ARRL HQ staff members present. Mr. Turnbull is/was
a Board member and Vice President; Dr. Craigie was the ATL Div.
Director. Neither of these are "HQ" staff positions. Paid ARRL
staffers have little, if anything, to do with running ARRL Forums at
hamfests and conventions, other than serving as occasional guest
speakers, or giving technical presentations, as Ed often does. I have
attended two of his RFI presentations -- ripping good stuff!

Brian:

OK, so what? This ten year-old declaration was never supported by
the FISTS leadership, since FISTS is not a "political" organization.
Point?

>Now, here's the quiz: can ya guess *why* we shouldn't/cannot retransmit
>things we hear on broadcast stations?

That's exactly right, Kim, as long as we're not "retransmitting" the broadcast itself. However, we can *transmit* the data we heard on those broadcasts as much as we want to, as long as we are making it a part of a normal discussion, as opposed to actually playing a recording of the broadcast itself. Therefore, you're still wrong.

Brian:

The Coast Guard called it a decision based on the cost involved
in recruiting, training, and providing pay and benefits for code-
trained radio operators. The ARS doesn't have that problem, unless
they're going to start paying us to participate in a voluntary hobbyist
activity.

The point is that FISTS is not soley a morse/cw use society. FISTS advocate changes to the rules much as do other organizations that get a lot of heat for it. Just more of the old PCTA double standard.

When they force an -amateur- to develop an unnecessary skill in a mode that
all other services have previously paid for professionally and then
abandoned, I think its reasonable that they should compensate at at least
the GS-7 or 9 technician level.

Source record: 40919

Because Joseph Schulman K6BWA / KA6UFC's entire career revolves around implantable biomedical devices, and:

1. that I have recovered several devices from infected sites on my person,
2. and that they precisely match his US Patent Office filings and drawings,
3. and because he has 224.840MHz repeaters to the N, S, E and S-E of my residence, all within a 22 mile radius,
4. and (!) because it is documented that due to tissue impedance and bandwidth issues, the 200MHz spectrum is preferred for this application which involves stimulation and recording of human biological signals.....

Allow me to pose this question:

What are the chances that Joseph Schulman K6BWA is NOT in violation of the law as well as FCC regulations??

Additionally, what are the chances that these signal transmissions as described below, could appear to be legitimate encoding or appear similar to repeater configuration commands??

Text from research reports sent to the NIH from K6BWA, Joseph Schulman:
"We have started construction of a implantable device controller that can store arbitrarily long or complex sequences of carrier modulation from a PC and transmit those sequences while maintaining synchronization with the RF oscillator in the coil-driver sub-system (implant circuit)....
"Personal-Trainer��T" Motorola 68HC11 microcontroller... uses a shift register to count RF carrier cycles and generate requests for bytes representing the desired serial carrier states. This strategy greatly simplifies the firmware for the "Personal-TrainerT", but requires PC based software to implement the encoding of the medical device parameters into serial carrier modulations. The necessary software is an addition to our ClinFit software package..."
"Suspended Carrier allows the use of same coil for both incoming and outbound telemetry at the same frequency... by picking up the residual resonance as clock-timing parameters,..

I'm hoping that someone can provide some helpful insight.

I looked at my license renewal/approval etc, and I have had my
Tech license since 1989 (then renewed in 1992 with a new address)
and my license had said TECH PLUS.

NOW it says PREV license class TECH PLUS, and new license class TECH

how will this differentiate me from other TECHS w/o Tech plus privlidges?
DO I still have TECH plus privledges? I had to take 5wpm code back in 1989
to get my license.

HOW do I prove this.. cj

You guys don't consider a board member/Vice President and another BOD
member, a division director, as "HQ folks"? I sure do. I didn't say
staff member.

All of the above would be perfectly legal transactions to conduct using
an amateur radio autopatch. The "Pizza Patch" paradigm is used only
to illustrate the necessity for the amateur to be participating in the role
of the consumer, not the merchant.

Brian:

What "changes to the rules" does FISTS advocate? From the time I first joined FISTS, the concept that FISTS is a "non-political" organization has been driven home many times. The only thing FISTS "advocates" is the continued use of the Morse/CW mode on-the-air, by providing operating events and awards programs geared exclusively to the CW mode. They "advocate" absolutely nothing as far as political action to influence the FCC to change the amateur radio service rules and regulations with regard to code testing, although they do support the notion of individual members taking their own initiative to do so. You are not demonstrating a very thorough knowledge of how the FISTS organization operates.

>I mistyped the parenthesis statement, intended to say
>"aeronautics is the second LETTER in NASA."
>
>NASA = National Aeronautics and Space Administration.

Ahhh....You made a MISTAKE. I see. OK then. Still a lack of attention to detail... A glaring one at that.

>Heh heh heh...the little monkey's fists are clenched so tight,
>the clenching extends to teeth clamped shut in anger

Geeee, Lennie, NAME CALLING...?!?! So UNLIKE you!

And by the way, was I WRONG? (You just admitted above you erred. And WHERE is the answer on the "strictly recreational" rado service?

>If one were to make an "issue" of typos, the little monkey would
>lose by a wide margin since it makes so many of them.

My occassional transposition of the letter "a" (ie: "ahs" when I meant "has") is a typo.

And my "typos" still don't outweigh your countelss errors of current Amateur Radio POLICY.

>WHERE did I or anyone else SAY that NASA had ever
>>been "dependent" on Amateur Radio to fulfill any mission criteria???
>
>That was in the implication by use of the word "incorporate."

No, Your Spinningness, that was YOUR attempt to obfuscate the fact that Amateur Radio IS a part of the International Space Station. It IS a part of the ISS program. Amateur Radio was designed into the ISS during development.

>This is further substantiated by the issuance
>>of >callsigns TO the ISS by several of the nations who underwrite the ISS,
>>therefore the operation of Amateur radio in space is recognized as important
>>by more than on national government.
>
>Error! Tsk, tsk, tsk. The last line should be "by more than ONE
>national..."

Thank you. However it does not negate the accuracy of the statement.

>Ham radio on shuttle was of the "shack on a belt variety," getting
>a handheld next to a large window.

Yes, the radios were "handheld". However the radios were specifically adapted for the Shuttle, including a special antenna that did fit into the portal. However in no way, shape of form were the radios carried by any of the STS fleet anywhere near the "shack on a belt" as is currently known or used by Radio Amateurs...then or now...

>(Snip).....In addition, the EMI from
>any such space "ham shack" cannot interfere with regular ISS
>communications or telemetry. All that was pre-planned on the
>ground and the extra payload mass accounted for (all payload
>mass is precious).

Nice technical narrative of already known facts snipped. Yes Lennie...those of us who are familiar with the program know this...We know this because we are active in such matters.

AND...THANKS! for validating MY comments vis-a-vis the INTEGRATION of Amateur Radio facilities into ISS...

>> Which still does not negate the fact that MILLIONS of people (per IMAX
>>accounts of visits-per-year) will see IMAX presentations every year....And
>>not "only" in the United States, mind you...
>
>How many IMAX theaters are there? Count them up and relate tham
>to "conventional" motion picture theaters. IMAX is still quite limited
>and in only a few urban centers.

Can you disprove any of my comments? if not...nice try at obfuscation.

>> But NOT as "nil" as the amount of exposure as Lennie the Loser has.
>
>...try to stay on the subject or at least part of the subject. The above
>is nothing but the usual gratuitous heckling signifying nothing but
>the monkey's psychological aberration..

Your lack of current details and lack of practical experience in Amateur Radio practice and policy IS part of the subject, Your Meaninginglessness. As the foregoing comments have, once again, proven.

>> NOW I GET IT! it's just a PUBLICITY STUNT! Kinda like pole sitting or
>>wing walking!
>
>Both "pole sitting" and "wing walking" were private showmanship
>publicity stunts done beginning in the Great Depression times.
>The monkey was born in the mid-1950s, well after that fact.
>"Wing-walking" is still an activity done at air shows. Air shows
>are almost all private endeavors designed for entertainment.
>The analogue is rejected.

Of course it is, Lennie. It made a fool of you again. Regardless of
"private" or "government" venture, a publicity stunt is a publicity stunt.

Regardless of WHEN it happened.....

>> Suuuuuuuuure, Lennie! NASA has nothing better for it's flight staff to
>>do than pass Amateur Radio examinations for "publicity"...As if walking in
>space
>>and creating orbiting laboratories isn't enough.
>
>Most astronauts granted an amateur radio license hold a no-code-test
>Technician license. They are all knowledgeable about...(SNIP)

Dissertation on the evolution of space walking and the technical
qualifications of the flight staff noted.

YOU made the assertion that this was a publicity stunt (your words). So
why the lengthy diatribe on non-related technical matters now?

>There is NO wide exposure to such amateur
>communications with space.

Sure there is...and getting wider every day. What have YOU done to help
lately? Care to hear what we are doing in SE Tennessee?

>> But...but...but...LENNIE! Above you just claimed it was a publicity
>stunt
>>for NASA...I ASSUME that you meant that it was intended to create some sort
>>of positive reaction by the unwashed masses towards an otherwise expensive
>>program.
>
>That seems to be the intent. It has no other purpose than being
>PR and a form of recreation for ISS crew members.

Oh no? Care to think that one over again? Shall we remind you of the
fire incident on MIR when Amateur Radio WAS used as a back-up to the on-board
systems.

>> If THAT was the intent, then it very certainly DOES mean "something" to
>>NASA!
>
>Wrong conclusion based on not understanding the aims and general
>structure of the ISS mission.

Not at all. The ARISS program DOES mean "something" to the participating
nations and agencies. Compeltely acceptable conclusion.

Perfectly UNacceptable attempt to duck the facts on your part.

>>The use of Amateur Radio to communicate directly with the now
>>decommissioned MIR and STS missions was widely published.
>
>MIR was not "decommissioned."

Sure it was. Certain materials and equipment was removed from the station. And just like a battleship no longer needed, it was "scrapped". Unfortunately the "conventional" means of scrapping the ship were not available.

>The "use of amateur radio" on STS was only "widely published" in
>the specific amateur radio media.

Oh...???

The Wall Street Journal had a piece on it. So has Popular Science, "Discover Channel", "Discovery Wings", CNN and a handful of others. The Chattanooga Free Press cited the use of Amateur Radio onboard the Shuttle at one time, and was later mentioned after the fire on MIR.

Those agencies are "specific amateur radio media"...?

>The public is well aware of the
>normal NASA radio communications with shuttle through hundreds
>of available video and audio feeds live and on-line since the first
>Mercury in May of 1961.

Sure beats millions of miles of string and tin cans, ya think...???

>> Again....You are asked to cite WHO (other than YOU) said it "was" a
>>"vital" part of the program, Lennie.
>
>Use of the word "incorporate" in the first monkey posting indicates
>an implication that it was so.

"Implication"...??? No...It meant, simply, that Amateur Radio HAS been incorporated into the ISS program. The present ARISS operating position WAS designed in from early on. It will INCORPORATE numerous ands, modes and operating combinations. Unless I ahve missed one, three nations have allocated callsigns to it.

Amateur Radio IS "incorporated" into the ISS. YOU made the insinuation that someone (not me) said it was "vital".

Unless YOU can prove that the on-going ARISS operations are bootleg and without approval of the ISS agencies, Amateur radio IS "incorporated" into the ISS program.

Unless YOU can "prove" otherwise...???

>ANY amateur radio equipment carried into space, any mission, is a
>freebie given by the various space organizations. Be grateful for, not
>boastful about such gratuities.

ARISS is not free. Monies have been expended BY the ISS consortium to design and INCORPORATE the equipment into the station.

And >>I<< can be as boastful as I damned well care to be, Lennie.

The "a" in ARISS is "Amateur".

The "r" in ARISS is "Radio".

I AM an Amateur Radio operator. I will never set foot inside ISS, but
the ARISS facilities on ISS will benefit ALL Amateurs that care to participate,
and it has already touched the lives of hundreds of school children around the
world. Which is MORE than anything anyone can say for anything YOU ever did.

I know it sticks in your nasty smelling craw, but thems the facts.

Choke on it.

Phil Kane posted a part 47 rule. It applies to any
telling of what is heard. The reality, however, is that
thousands of people (especially reporters, ambulance chasers,
lawyers, tow truck operators, etc. listen, act and repeat
what they hear all the time.)

> By the
> way...it's my regarded opinion that the reason we shouldn't/can't do this

Kim,
Phil's post DOES NOT apply to broadcast. Here's what Phil
said:
Try 47 U.S.C. s. 605 pertaining to interception and divulgence of
> communications without authorization by the sender.

That is targeted at "interception" of things like police, military,
private, etc transmissions... it has no bearing on what anyone hears
on broadcast radio or TV.

Cheers,
Bill K2UNK

Go the the nearest Home Depot hardware outlet and obtain a large metal funnel. Wear it over your head to filter out the offending signals. Use grade 0000 steel wool for padding around any openings.

With all kind wishes,

That's what I mean by "any more than necessary". If the autopatchers
keep mentioning the name of the shop, how good the pizza is, etc., it could
reach a point where they are doing a pizza shop commercial rather than actually
ordering a pizza.
>

Agreed 100%.

> What
>seems totally amazing is that Kim even ignores the

>FCC rulings that have already addressed several of
>the specific scenarios she claims are violations.

Seems to me that Kim wants to whittle away at amateur radio
until it is destroyed. Kim thinks it's OK to cuss on the air and
make fun of other hams having legal conversations, but it's
not OK in her book to discuss the weather or the traffic or
order a pizza. Even though the FCC has repeatedly said
exactly the opposite.

It's not code tests or lack thereof that will drive amateur radio to
extinction. It's addytoods like Kim's.

COOL!

But ya gotta beat this:

My commute to work is about 1.5 miles one way - so close that I can go home for lunch on some days. Free, safe dedicated parking a few steps from the office door.

And most days I carpool with two beautiful young women who are very appreciative of my driving skills.

The only thing I can't match is your gas mileage. The Odyssey uses a bit more fuel than a Corolla.

>alternatively through other radio services" category...

Nope. Not any other radio service I know of. And the rule only prohibits such
communications if its done on a regular basis.

>97.113 (again):
>(e) No station shall retransmit programs or signals emanating from
>any type of radio station other than an amateur station, except

>
>I cited the whole section, but you need only pay particular attention to
>"*or signals* emanating from *any* type of radio station *other than* an
>amateur station..."

The prohibition is against retransmitting the program or signal, not the
information.

If KYW says it's 75 degrees at Philadelphia International airport, or that Alan
Greenspan decided to leave the prime interest rate alone, I can legally repeat
that information on the ham bands. What is not legal is retransmitting the
actual KYW program, either in real time or time delayed.

Phil Kane's railroad radio example is a bit different because, unlike BC
services, railroad radio communications are not usually meant for the general
public. Indeed, the general public won't understand much of it anyway. ("He's
stopped at the dwarf - what can you do to get that hogger a highball?" or "The
glad hands parted and he pulled a knuckle" don't mean much to most people.)

Your interpretations of these rules are simply not correct, Kim. The rules are
not nearly so restrictive as you think.

Time for me to pull the pin.

Probably right but unless I have been badly misinformed, the BOD makes
the policy decisions (though at whose behest is often open to question).
If it's not done at HQ it sure is done under the HQ umbrella.

Jeesh.... now you are gonna have me do a whole series of tapes!!!!! :) :) :) I agree about the grounding issue, as that could apply to many different aspects of a non-hams life. Especially when dealing with RFI from their computers, home stereo's etc....

I will be "polling the masses" both here and elsewhere as to their suggestions of what should be covered when I get closer to the time to make these videos. At least that way, if I forget something, I should have most all of the bases covered.

Don't get me wrong..... I can cuss with the best of them.... After a particularly bad medical run I went on, where the only survivor in the victims car was a young boy, (parents didnt make it) that was hit by a drunk driver, I and many others vented back at the station, as to the uselessnes of these deaths.

I was mainly getting to the point of just because we *can* say, does that mean we should say it over the air? Most the hams here seem to be more along the line of anal-rentive introverts being in a town with as many P.h.D.'s we have here thanks to Dow. There are some exceptions to this though.... me! Who else would be crazy enough to run in a perfectly good burning building?

Ahhhh Hans, excellent concept, but unfortunately a faraday cage type
"helmet" would be limited by the size of the openings in it. Although tissue
offers resistance, RF will travel through it. At 224 MHz, a faraday cage
would be functional providing the largest aperature, or physical opening, in
it was approx 8cm or less, so I suppose a funnel could offer relief as long
as it was a conducting material. These particular devices however are more
difficult to contend with because each seperate device is individually
addressable, and this allows device stimulus parameters, as well as
addressing to be transmitted to an implanted unit elswhere (say, in the
foot) and the data can then be "daisy chained" via RF or magnetic coupling
and "relay", through the tissue, to other devices and then to the correct
device address. This would circumvent the effects of a "helmet". Now an
entire "tent size" faraday cage could be considered.... LARS

Dear Mr. Voobmer,
I don't suppose it has occured to you that many ham operators go to that
cb newsgroup because..they still own citizen band transceivers and enjoy it.
Further, most everyone (with the exception of you of course..) knowing
this bit of trivia; these same ham operators may be interested in this
equipment.
Just as many in radio-phono newsgroup do not have ham license but are
interested in ham receivers.
In short Mr. Voobner.....get a life..

I may be mistaken, but not wrong.

>I was raised in the country and
>am country through and through.

Which means what, exactly?

Definitions of "country" vary all over the place. To some people it's clothes, to others it's furnishings, to still others it's driving a pickup truck as a commute vehicle or an SUV that spends 99% of its existence on pavement. Etcetera, etcetera, etcetera. Let's not even go into the oxymoron of "country music".

You choose to work in the big city and have a long commute.

>As development encroaches upon this area,
>my husband and I have even toyed with the idea of moving about 20-25 miles

>haven in the morning and evenings...they don't bother me at all.

Ah - now I understand. You like sitting in traffic, and don't want hams use of radio to reduce that. Thus the "chiding" "teasing" and "busting".

>
>Is FISTS soley interested in promoting the use of Morse/CW,

Yes. The declaration you quoted is a recommendation that is a decade old. The elimination of multiple-choice code tests came about long after that recommendation was made. Many hams supported the end of multiple-choice code tests.

>or is it also
>interested in the regulating of Amateur Radio?

There is NO regulatory policy directly promoted by FISTS. It is not a political organization.

Did FISTS file proposals or coments with the FCC? No. Ex-parte presentations? Nope. Does FISTS membership require support of code testing? No, and it never has.

The purpose of FISTS is to promote the USE of Morse code, and its preservation.

Testing is a whole other issue.

And code testing is a nonissue in the USA and most other countries today. FCC and many other regulatory agencies have reduced the test to the bare minimum that meets the treaty. FCC has made it clear that the treaty is the one and only reason the 5 wpm code test exists at all. Any reasonable reading of the R&O for the recent restructuring indicates that the FCC will end code testing as soon as treaty provisions allow it.

>NOW it says PREV license class TECH PLUS, and new license class TECH

FCC has been doing that since April 15, 2002. All Tech Pluses who renew get
licenses that say Tech. Eventually there will be no more Tech Pluses.
>
>how will this differentiate me from other TECHS w/o Tech plus privlidges?

You have to retain documents that say you have passed the code test. Your old
license that says Tech Plus is one proof, and your current license that says
"previous class Tech Plus" is another proof.

>DO I still have TECH plus privledges?

YES.

For the long term, your best bet is to upgrade to General or Extra. All you
need to do for General is to pass a 35 question multiple-choice written test at
a VE session. Sample tests are available at many sites.

http://www.qrz.com

has online sample tests.

Good luck!

I don't see how, Mike. It was presented as the real 20 wpm test. The way they
gave tests in those days was straightforward: No warmups, no second tries, no
going back after the code stopped and correcting your copy. You got the
straight 5 minutes and that was it.

N2EY wrote, about my passing the written test for General:

>Congratulations, Val!

Thanks! I promised my ham neighbor, who has been Elmering
me from time to time, that I would take a test a month until I was
out of tests to take! I was not able to fully prepare for the Gen-
eral test but did better than I thought I would. Looking at this
Extra book, well, that's going to be a bit more of a challenge for
me to do in 30 days!

>How's the code practice coming? Lots of free software out
>there that will run on your PC.

Yes, I have some of that and have been learning the alpahbet.
But the real goal was to make these keyers and do CW on 2m
with the radio actually being keyed by the switch. That is, we
could use the code-practice thingees and just open the mike
but, hey, actually keying the H/T would be so much more
like, er, COOL! Also, we could make these available through
the club to other new Technicians, encouraging them to get on
the air with us, on 2m, with CW! It's a simple circuit and the
whole thing costs about $10.00 but it's been a long time since
I've done this stuff . . . and I've yet to get one to work right. But,
it won't be long providing my soldering technique improves!

Agreed, but since most other hams would agree
that the user was abusing the autopatch by tying it up
for such an extended time for no reason...the liklihood of

the advertising scenario ever happening isn't too
high at all.

I'm not convinced that Kim wants an end to ham radio.
I'd rather believe it is just a lack of clear thinking as
to the laglities of the rules and their actual application...
especially where there is clear FCC direction in some cases
or a long history of accepted practice (i.e. the FCC hasn't seen
fit to say something's wrong) for some of the things that Kim
wants us to believe is/are illegal.

I can't beat that every day, BUT with the
advent of higher speed modems and extensive
conference calling capabilities....I can usually
telecommute one or two days a week from my
home which is a 0 mileage commute. I spent
three hours yesterday enjoying the incredible 90
degree afternoon weather on my deck while
on a conference call and logged into my
corporate internet system. Days like that don't
happen much in April in NJ.

I agree.
My understanding is that ALL policy decisions are via the
elected directors. HQ may suggest a policy change, but the BOD
still must approve. That's very similar to many organizations.

The only thing that counts is that you passed. You
get no bonus for passing with a higher score than any other
person that passed.

> Looking at this
> Extra book, well, that's going to be a bit more of a challenge for
> me to do in 30 days!

You mentioned the QRZ site. That is an excellent self
testing process. The great thing about QRZ.com is
that you can grab a few minutes and run through a
test anytime. I would do two or three tests each
day at lunch, one or two during the day as a break, etc.
A good deal of the pre 4/2000 test was pure memorization
about space communication rules, VE rules, etc.

Congrats on the General theory. My suggestion is to do the
code next. The CSCE for the General written is only good for 365
days. That's plenty of time, but others have lost credits by
not actually getting the license within the time frame.

Cheers,
Bill K2UNK

I strongly recommend going the upgrade route also. As Jim N2EY
suggests, the qrz.com web site is a great place to self test
yourself. Do a couple of tests a day at lunch and again in the
evening and you'll be up to speed passing the online tests

in the 90% or better range in a few weeks.

This is, of course, true, but I really did want to do
WELL on that test. It's just me.

>You mentioned the QRZ site. That is an excellent self
>testing process. The great thing about QRZ.com is
>that you can grab a few minutes and run through a
>test anytime.

Yes, it's fantastic. I probalby took that Technician
test 40 or even 50 times over several weeks. When
I was going through it in just four or five minutes, and
getting 100 nearly every time, well, I knew I was ready.

>I would do two or three tests each day at lunch, one
>or two during the day as a break, etc.

What seems to work for me is to take ten in a row,
in the evening, and note mistakes. I have the book
with me and refer to it as I go along. It's slow at first
but all the sudden things start really moving and you
remember the material. The book plus the computer
seems very powerful to me. And yes, you can "look
in" at any time and take a text on that site. Very nice.

>A good deal of the pre 4/2000 test was pure mem-
>orization about space communication rules, VE rules,
>etc.

I'm sure that was true. It's the modern world and
a certain amount of memorization HAS to be done!
Schools today are NOT really teaching kids to simply
KNOW their multiplication tables, COLD, or so it
seems. They're teaching "concepts" about math, to
NINE-YEAR-OLDS, or so it seems. I told my little
girl, who is nine, that she WILL know her multiplication
tables, by the end of fourth grade, up to 15X15, COLD,
or we will know the reason why! And she's just about
got it. Her teacher says she's using "a short cut" but
has not otherwise complained! Can you IMAGINE!

> Congrats on the General theory.

Thanks!

>My suggestion is to do the code next. The CSCE for
>the General written is only good for 365 days. That's
>plenty of time, but others have lost credits by not actually
>getting the license within the time frame.

My goal is to take both the Extra written and the code
next month. I would have already done the code but
for this keyer, which was going to allow me to "train"
with another new Technician in what I am viewing as a
pilot program for our local club. I'd like to be able to
offer, free, a keyer to each new Technician, and then
describe what amounts to a 2m CW "net" that we could
put up from time to time, for training and what-not.
The plan was to use myself as a guinea pig BUT the
keyer has to WORK first! So, I'm behind.

The hired help at HQ may suggest policies, new programs, changes in old
policies or programs, etc., but no policy decisions are made at HQ or under
the umbrella of HQ. The decision making, including approval/disapproval of
HQ suggestions, is made by the field representatives (Division Directors).
No one at HQ sets ARRL policy.

The material requires memorization. How can you know the band edges
without memorizing them? How can you learn Morse code characters
without memorizing them? Do you develop Morse code from first
principles every time you use it?

DOH!!!

Yep - tnx Bill. April 15, 2000.

Historical tidbit: When the FCC proposed removing the code test from
the Technician class (1990), part of their idea was that those Techs
who had passed 5 wpm would simply keep documents showing that
information. IOW there would have not been a formal Tech Plus license
class at all. But the protest against it was so unanimous that FCC
added a new class of license. Yet as late as mid-1994 some pre-1991
Techs were getting their licenses renewed as Technician, not Tech
Plus.

Now we have the system FCC wanted more than a decade ago. Between
renewals and upgrades, Tech Plus will simply disappear in a few years
even if no other changes occur.

Performance anxiety is what I'm thinking about, Jim.

Many people will tend to start out poorly, then gather momentum and poise as they go. This happens a lot with public speaking. I think it has a lot to do with why I flunked the code test the first time. I had traveled quite a way, had drank a good bit of coffee, and even though I tried to convince myself otherwise, when I took element 1, I freaked for a while. Didn't settle down until near the end of the test.

The second time around, 'twas a lot easier. But as I said, it depends on your personality.

You have to keep your expired license as proof.

This problem initiated one of the technical corrections that was denied.

You still have the code privilege.

Ya don't know the half of it.....
>
> I think we all had some defining moment that we decided this was
> something interesting to do.

For me it was as soon as I heard about ham radio.

But many kids and adults don't even know ham radio exists. Or if they
do know, their image of it is very inaccurate.

Consider the recent movie "Frequency" - according to that movie, ham
radio was something people did 30 years ago, not today (even though
there are more than twice as many US hams today).

Or the beginning of the film "Contact" - great opening, but the words
"amateur radio" or "ham radio" are never mentioned at all. And again,
there is no mention of ham radio as being something done today.

> Most of us wish we had started sooner. But
> I don't think we should be too hopeful of our displays at malls to
> attract kids to the hobby. I suspect the potential hams will find their
> way there whether we do that or not.

I think the main point of displays and literature should be to let
nonhams know what ham radio is and what we do. Those who are
interested will follow up. But if people don't even know ham radio
exists, or have a distorted image of it ("What's your handle?") the
ARS is not served well.

Hey pal, an associate degree in electronics and 30+
years in industry. The only thing I needed was to
pass the test. When was the last time any ham had
to regurgitate the rules for establishing a space station,
VE credentials, testing procedures.
The rest of the test that did involve theory was a no brainer.

Cheers,
Bill K2UNK

CJ,

All Tech+ are being renewed as Tech ... but the FCC knows that you
have credit for 5 wpm.

You still have your Tech+ privs.

I would keep a copy of your most recent Tech + license document, just
to be sure ... and you will need to produce it in the future if you go to
upgrade, in order to claim your lifetime credit for the 5 wpm Morse test.

Even though they spend less than 1% of their lives at ARRL HQ?

In ARRL parlance, HQ folks means the paid staff at ARRL HQ. "Board" or "official family" means the unpaid ARRL Board of Director or other volunteer officers.

Dick, it is the other way around; the HQ staff operate under the ARRL Board policy umbrella. I can only occasionally get away with telling the Board what to do. :-)

The ARRL Board meetings are not held at ARRL HQ, although a few of the smaller committee meetings may be. The Board usually meets twice a year, in cities of their choosing. In past years, most of the July Board meetings have been at a hotel facility in a hotel near Newington, perhaps as much as a 45-minute drive away. The January meetings are usually held someplace warmer.

That sounds a lot easier than trying t memorize all that stuff without understanding. Why would you want to try to convince aspiring hams that learning is the "hard" way?

Actually, I am one of those who passed his test with a combination of learning, memorizing and lucky guessing.

Do you think that I am a loser?

You could always memorize all the other service's band edges, then operate
outside them.

How can you learn Morse code characters
> without memorizing them? Do you develop Morse code from first
> principles every time you use it?

You can't. The FCC doesn't provide the 1st principle to develop from. Yes,
yes, its an old argument. I suggest just making up your own code code like
the VEC did.

Maybe you can explain to me how it blew up in my face? Or, when I say I've travelled a lot, you'd expect me to meet your definition of "travel" and "a lot." Right? Just as Jim wants me to meet his definition of "all" in all bands. Like I said, my all is different from his all. Wonder why he didn't choose any of the Ghz stuff (I've never been there, either), and there's probably lots of other bands I've never been on.

You keep clinging to your semantics, you and Jim. It's your dislike of someone that determines your attitude...not the content of their material.

> payments in addition to my military retirement?

Yep, enlisted retired pay is so low that even that added to GS-7 pay is
pretty pathetic.

Define "coming." That is a verb, meaning to move, right? Or at least a
word that implies motion toward something. How can code practice come or
have motion?

"Free?" "Lots?" Free in terms of money, jail, or politically free? Lots
in terms of tracts of land, or... Could you be more specific, please? "Out
there." Would that be out there where you are, or further than that?

Steve, relax, the ARS isn't going away any time soon. It'll take another
decade for the actuarial table to do any real damage. The first boomer
turns 65 in 2010.

Welp Hans, early in my rrap career, I was told that I needed to learn code because the "Chicoms were overrunning" someones position and, by extension, if I learned code (which I already had) I might not suffer the same fate. Sounds a lot like the military to me. This mentor used a variety of screen names, but GrayJL and Xray are easily searched. He's most famous for Know Code = Know Ham Radio, and No Code = CB Radio. He was pretty limited in cognitive processes; I think the Chicoms actually got to him. Apparently knowing the code didn't save him.

At least on a repeater, its probably confined to America, whereas on 75M its
damaging international goodwill. Good thing we got a riff-raff filter to
keep that from happening.

> while other stations have tried desperately to break-in for a chance to

I really hate to admit this here, but as a senior NCO a few years back, I
was tagged to be a "pee" monitor for the USAF random urinalysis program.
Not exactly within my specialty, but ... Quality Force/Zero Tolerance and
all.

Anyway, your observation is correct.

1792. Speaking of Rules Interpretation

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-19 02:31:32 UTC
From: W5TIT - Kim <seventythree@eightyeight.net>
Message-ID: <3cbf844c_1@newsa.ev1.net>
Source record: 41061

Noting the recent exchange on interpreting FCC R&R, note the following:

PART 97--AMATEUR RADIO SERVICE--Table of Contents
Subpart E--Providing Emergency Communications
Sec. 97.407 Radio amateur civil emergency service.
(a) No station may transmit in RACES unless it is an FCC-licensed primary, club, or military recreation station and it is certified by a civil defense organization as registered with that organization, or it is an FCC-licensed RACES station. No person may be the control operator of a RACES station, or may be the control operator of an amateur station transmitting in RACES unless that person holds a FCC-issued amateur operator license and is certified by a civil defense organization as enrolled in that organization.

and:

(c) A RACES station may only communicate with:
(1) Another RACES station;
(2) An amateur station registered with a civil defense organization;
(3) A United States Government station authorized by the responsible agency to communicate with RACES stations;
(4) A station in a service regulated by the FCC whenever such communication is authorized by the FCC.
(d) An amateur station registered with a civil defense organization may only communicate with:
(1) A RACES station licensed to the civil defense organization with which the amateur station is registered;
(2) The following stations upon authorization of the responsible civil defense official for the organization with which the amateur station is registered:
(i) A RACES station licensed to another civil defense organization;
(ii) An amateur station registered with the same or another civil defense organization;
(iii) A United States Government station authorized by the responsible agency to communicate with RACES stations; and
(iv) A station in a service regulated by the FCC whenever such communication is authorized by the FCC.

Regarding (a), what do you all think? Can a RACES organization make its rules on whom may and may not transmit during their RACES nets? I have heard this debated all over the place and have RACES organizations here that allow "just anyone" to enter their nets; and those who allow no one but their own organization's participants. By "their own" I mean, literally, *only* those RACES stations who are authorized by the city in which they live/work.

Regarding (c)(2) and (4), does this mean that any amateur who with a civil defense organization--regardless of their affiliation with the particular RACES organization--can communicate/transmit on any RACES net? And, (4) pretty much covers any amateur at a station of the Red Cross, etc., right? So, what would be "legal" about a RACES net control saying to that person that they cannot enter the net because they are not recognized by that particular RACES organization.

Overall, if the R&R are to be followed, to the letter, is it OK for a RACES organization to allow anyone onto their nets?

I can't believe that you think us ham's are a causing a disgrace to the
"citizens" band by posting an ad selling something. Do you want to see
disgrace? Take a listen at the 10 meter band on a HAM radio and listen to
all the "hash and trash" that's being transmitted illegaly by the "citizens
band" Lets get even simpler. I can go a whole day, or a whole month without
hearing one swear word on my local repeater, or one slander towards anybody.
But, oh no, god forbid i say "damn" on the citizens band!
FCC should make it so everybody has to have a license to use CB's.
73's!
Mike

I choose to have fun with people who think that all that they have to
talk about is the quality of other people's radio conversations. If
it's not illegal, it's ok with me. If I'm not interested, I'm not
```

required to listen. There are some who think that freedom of speech is great so long as people only talk about things that they want them to talk about.

Be careful how you use the term "knobs." With a call sign of "TIT" there could be some kind of an innuendo in there somewhere.

I'm back to lurking, but you are really very funny. With a little work you could become a comedian.

I was once stopped on the coastal highway at night by a CA patrolman who
accused me of having a red light on top of my antenna. The salt air was
causing an orange corona when I transmitted. He said the glow was illegal
because it was visible to oncoming traffic.

Call them "HF amps", "10 meter amps", "Broadband amps", whatever you
like. We both know they're meant to sell to CBers and be used
illegally, so why continue the charade?

> Further, most everyone (with the exception of you of course..) knowing

Fpr some obscure reason you're tryingto suggest that the Board of
Directors is not in charge of the ARRL. Strange.

You have proved yourself incapable of reading plaing language English.

1804. Novice Sub-band Refarming

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-19 05:07:19 UTC
From: Black Silver <Black_Silver@earthlink.net>
Message-ID: <bCNv8.20117$L1.1579457@newsread2.prod.itd.earthlink.net>
Source record: 41073

The FCC has assigned a "RM" (RM-10413) to the ARRL Novice Sub-band refarming petition. Interested parties can comment to FCC at their web site (http://gullfoss2.fcc.gov/prod/ecfs/upload_v2.cgi) or by mail.

Below are my comments.

Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of)
)
Amendment of Part 97 of the Commission's) RM-10413
Amateur Service Rules Governing)
Operating Privileges)
)

PERSONAL COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments are in response to the ARRL proposal for "refarming" the existing HF "Novice sub-bands".

I. Discussion:

The ARRL petition does not address the implementation of new technologies as repeatedly requested by the Commission in WT Docket 98-143. It simply proposes to eliminate the Novice segments and reshuffle that spectrum among existing legacy modes. Rather than gain consensus, the ARRL polling method produced a popularity poll among several non-responsive (to 98-143) choices.

Rather than just "more of the same old stuff", I propose that the Commission take this opportunity to provide the Amateur Radio service with a new incentive to concentrate on paragraph 97.1(b) of the Commission's Rules.

97.1(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.

While I agree that the declining Novice license population no longer justifies several significant chunks of spectrum as a "reservation" for improving their Morse skills, and that these "reservations" have outlived their regulatory purpose, I propose that we retain these 50-year old "reservations" and

convert them to a new purpose which will ensure the future Amateur Radio service continues our "proven ability to contribute to the advancement".

II Proposal:

A. To "de-populate" the current Novice segments, I propose that all Novice (and Technician with code credit) licensees be authorized to use Morse code in the same band segments now authorized for General class licensees.

B. I propose that the current Novice sub-bands be set aside as a new "Experimental Reservation" for non-traditional and experimental modes such as digitized voice, digitized image, and other "forward looking" communications methods.

C. I propose that the current power output level of 200W be retained for those segments, and additionally propose that transmitters in those segments must be equipped with auto-adaptive circuitry to reduce output to the lowest level consistent with reliable communications.

D. I recommend that the Commission grant broad discretion to amateurs operating in this "experimental reservation" as to innovative modulation schemes and non-traditional technologies.

Respectfully submitted,

H. Hans Brakob, K0HB
1610 Weston Lane
Plymouth, MN 55447-2855

> there's probably lots of other bands I've never been on.

Jim hasn't set the definition of the term "all HF bands". The phrase
can only mean one thing. If you are the only person who feels that she
can leave out a band or two and still claimed to have been active on
"all HF bands", you are the one with the problem of definition. Let's
take your travel analogy: If you claimed to have visited every state
and it happened to come out later that you meant that you'd been to all
of 'em except Missouri, Alaska and Hawaii, your statement would have
blown up in your face. When you state that you've operated on "all HF
bands" but you mean "most HF bands", your statement has blown up in your
face. I trust my explanation is sufficient.

> You keep clinging to your semantics, you and Jim. It's your dislike of
> someone that determines your attitude...not the content of their material.

I don't know about clinging to semantics, Kim but semantics are
important and can't be simply tossed aside. You could make an effort to
make your statements factual to begin with. That would have made it
possible to avoid the game of dodge ball you played when questioned
about what mode you used on 30 meters.

>wants us to believe is/are illegal.

Agreed. But some of the attitudes and opinions Kim professes are
not good for the future and health of the ARS. For example - imagine
an amateur radio service where cussing on the air is tolerated but
discussions of traffic and weather are not.

If this is implemented by the FCC, I would hope that it is done without the current data rate limitations that apply to the rest of HF. This would be an ideal place to allow higher-speed (translate: generally greater bandwidth) HF digital operation.

How could you possibly get that from Hans' saying that policy decisions are
made by the Division Directors?

Strange, indeed. Is this another one of those "what you said -- what you
really meant" sort of things?

> Did you even read what I said???

Yes, I did. You said that the Board makes policy decisions, but then implied
that it is at the behest of some unknown persons, and then said that you
thought those policy decisions were made under an ARRL HQ umbrella.

Only the first statement is correct. The "behest" is very well known; the Board
members are elected by the direct vote of the members in their Divisions. The
Board does not meet an ARRL HQ and the ARRL staff do not dictate policy to the
ARRL Board, your consoiracy theory notwithstanding.

>laughing right along with all of us on the repeater.

Ah - so the ones who are offended don't matter. Now I understand.

>So take your wounded
>ego off to someone who might care...
>
My ego's not "wounded" at all.

Most people aren't offended by what I write here. However, you seem to
get really upset over having the bright lights of logic, reason, fact and
experience shown on your words here. Thus the ad hominem attacks
on the one who shines the light.

Perhaps you should take your own advice and "get over it".

>*Maybe* you can explain to me how it blew up in my face?

As I have written before:

The conversation was about the HF amateur bands. You claimed to have " been on
all bands, lots of times".

> Or, when I say
>I've travelled a lot, you'd expect me to meet your definition of "travel"
>and "a lot." Right?

Just the generally-agreed upon ones. "Traveled a lot" is pretty vague. "All HF
amateur bands" is well-defined. It means 80, 40, 30, 20, 17, 15, 12, and 10
meters. Some people even include 160, but 160 is actually an MF band.

>Just as Jim wants me to meet his definition of "all"
>in all bands.

Not my definition. The generally accepted definition. "All" as in "each and
every, no exceptions"

> Like I said, my all is different from his all.

And different from everyone else's "all"

>Wonder why he
>didn't choose any of the Ghz stuff (I've never been there, either), and
>there's probably lots of other bands I've never been on.

Because the context was HF amateur bands.
>
>You keep clinging to your semantics, you and Jim.

That's a good thing.

>It's your dislike of
>someone that determines your attitude...not the content of their material.

Just the opposite. It's the content of your material that determines our
attitude.

You post things that appear to be incorrect. When questioned on the details you get angry at the questioner for even daring to point out that you might have made a mistake, or written something that doesn't make sense.

Well Kim, In my 16 years of corresponding online (starting with early
dial-up BBS's in the 80's), I've been known to get involved in some
very contentious exchanges of opposing points of view. I very seldom,
if ever, took it seriously (I tend to be a "fecal disturber" and like
to see what happens when the fertilizer gets agitated), and at one
point or another an agreement was reached - even if it was "well,
we'll never agree so let's drop it" I never took it personally - but
some do... Those that can't learn to disagree in a civilized manner
are simply.... uncivilized... That's also not to say that I
haven't, on occasion, taken some people to task for their attitudes -
as I certainly have. Even if I agree with their argument, abusing

people is NOT a way to make a point...

Anyway, the sense of humor here is fully intact, and just because
people thing differently is no means not to be pleasant about it...
Anyway, 73 to you!

I agree 100%. Many hams are stymied in their attempts to get on HF by antenna, rig and/or time-of-day problems.

>> More type-acceptance. Limits the ability to experiment. Very uncool.

>No type-acceptance involved.

If a rig must have certain features, such as automatic power control, in order to be used in those subbands, how is that feature to be guaranteed without type acceptance?

>> Would CW still be allowed in those segments?

>No.

Why not?

Having a "no CW" subband on HF/MF sets a very bad precedent and complicates the rules unnecessarily.

Better to simply set up those subbands as "digital" and say that casual CW use is against the bandplan, same as the 'phone subbands. How much actual CW use do you hear on the HF phone subbands?

Overall, a great idea that needs a few minor tweaks. Much better than simply widening the 'phone subbands, squeezing the digital and CW folks still more, and continuing to restrict digital data rates.

In those same sub-bands we now have a 200W power limitation. There is
no type acceptance to "guarantee" that feature. In fact, there is only one
"type accpetance" currently in effect in amateur radio, and that is the
shackle
placed on HF amplifiers because of CB outlaws.

Why in the world should we suddenly apply the concept of "type
acceptance" to amateur radio equipment, especially if we are trying
to promote experimentation?

> >> Would CW still be allowed in those segments?
>
> >No.
>
> Why not?
>

Because I envision these sub-bands to be a reservation for
experimenters. I'd like them to gain the reputation of "come
here to tinker with your new idea", to arouse the curiosity
of "tuners by", and to be a place where we can proudly point
when regulators ask "what are you hams doing to advance
the art". I don't want any legacy modes in sight.

Why bother?

RACES is one of the things REMOVED by the April 15, 2000 changes. In 8 years (maximum), there will be no RACES stations because all their licenses will have expired out.

Yes, as long as those rules are not in conflict with the FCC's
Rules.

>Regarding (c)(2) and (4), does this mean that any amateur who with a civil
>defense organization--regardless of their affiliation with the particular
>RACES organization--can communicate/transmit on any RACES net?

Replace "can" with "is eligible to be allowed to, at the
discretion of the RACES officials or Net Control"....

>And, (4)
>pretty much covers any amateur at a station of the Red Cross, etc., right?
>So, what would be "legal" about a RACES net control saying to that person
>that they cannot enter the net because they are not recognized by that
>particular RACES organization.

Just because one is "registered" does not mean that one can force
their way one to the Net against the direction of Net Control.

The question of which licensed and registered operators the
RACES director is allowing to participate is a spitting contest
of how the RACES organization is run and has to be resolved by
the professional Emergency Management official of the local
government unit under which RACES operates, not the FCC Rules.

>Overall, if the R&R are to be followed, to the letter, is it
>OK for a RACES >organization to allow anyone onto their nets?

Yes, as long as the operator is licensed by the FCC and
registered with RACES, s/he can be allowed onto the Net.

"Can be", not "must be".

Didn't we kick this around a while back?

If there was a TRUE emergency...any mode is still allowed.

Depends on how you define emergency.

Experimentation is not just working with new modes, it
may also involve experimentation with new twists on old
modes or even operating procedures. I see no value
at all in prohibiting the use of OOK Morse or any other
variation of an AM mode in an experimental sub-band.

Experimenters should have as many options as possible
open to them.

I assume from his comments that Hans would prohibit ALL
"legacy" modes from these small segments of spectrum, not
just Morse, but (conventional) RTTY, SSTV, SSB, AM, et al ...

From a philosophical point of view, that would seem fair, but
I have a problem with it ... I made a pledge that I would not
seek to, nor support a move to, restrict Morse usage ... and
I will stick to that pledge.

I can support ALMOST all of Hans' proposal (it's certainly
MUCH better than the ARRL's proposal for the use of those
slivers of spectrum), but I can't support the "no Morse allowed"
part ... I gave my word.

However, I would hope that the Morse folks would "give new
things a chance" and honor a gentleman's agreement, as Jim proposed ...

I don't believe that any equipment is still type accepted today. Most intentional emitters are certificated. The exception to that is most ham equipment. Of the amateur transmitting equipment, only HF/6M amplifiers must be certificated.

IMHO, those doing QRSS OOK CW or coherent OOK CW are expermenting. And there
are technical advances to be made in both of the above.

My only fear in seeing this recommendation be adopted by the FCC is that the
experminters sub-band might be even quieter than the present use.

One other point -- right now, other than data rate limitations, hams can use
all of the bands for such experimentation.

The MFSK and Hellschreiber modes are also decades old.

Maybe we could have a sub-band where *everything* is prohibited! :-)

Ah, OK, back to the matter of semantics again. Maybe you've got the time to be that analytical, Dave...and maybe Jim does, too. However, I think most of us would be able to ascertain that, when someone says they have worked all bands or been on all bands, they're probably either bored as hell or they probably mean *most.* I'll try to remember that you and a couple of others are so anal that you've got to have your things inside the box...

> Dave K8MN

Don't flatter yourself, Dave. Why in the world would someone be concerned about dodging a question about 30M? The only thing I can tell you about that band is that I *think* it is an all digital band. So, when the question arose, I knew I had not been on that band--as I know I've never done any digital work. Here, while we're at it, I'll even mention that the only VHF/UHF bands I've been on are 2M and 70cm. So, get your little ink pen out and figure out what anal comments you can make now...

I am so, so glad you made the last point, Phil. YES!!! You and I kicked this around via private emails between each other. And, I've cusses and discussed this time and time again on the repeaters in our area. Do you know that the same thing happens with this topic of R&R as happened with the traffic discussion we just had (still going) on this newsgroup!!??

There are people who tell me I am absolutely wrong when I tell them that restricting people from a RACES net should not be attributed to FCC Regulations, but to the discretion of that particular RACES organization. *Their* interpretation--and they maintain it no matter what--is that the FCC absolutely mandates that no one but a RACES person is allowed on a RACES net.

So, I was hoping that you would respond, completely unprovoked by my mentioning any prior history between you and I, and I am also curious to see what others' responses to the post will be.

It just points up the fact that we *all* (yeah, Jim/N2EY, *ALL* meaning majority/most) interpret the rules differently and that is our own personal decisions as to how we interpret them--*until* we are in front of the FCC.

Ed, I hadn't even given that a thought. It makes a LOT of sense. I remember the ice storm in the North East a few years back ... I do recall there was a need for HF mobil amateur operators as power and telephone were out for hundreds of miles. FM on VHF/UHF makes sense for local operations, but there is nothing like digital to pass messages without error. A higher data rate would make a lot of sense. Sure, multiple hop long haul would not likely fare well, but on 80 meters over a distance of a couple of hundred miles, I would guess that signals would be reasonably stable and not as subject to phase shifting. It would be a heck of an opportunity to see just what COULD be done and certainly give a big edge when a relatively large disaster hits (such as 9/11). Great thought!

The current rules (97.305(b)) contain the restriction that such
experimentation be only "brief periods". Would you design and
implement a new modulation scheme if you were restricted to
"brief periods" of test emission?

I wouldn't either, but I sure would be a lot more inclined to do the
design if I knew there was a small segment of the spectrum
where I and other tinkerers could meet for extended test, debug,
and prove-in of our ideas.

Or we could take the politically easy ARRL approach and just
shuffle some legacy-mode boundaries around while ignoring the
FCC plea (in WT Docket 98-143) regarding "implementation
of modern technologies into the amateur service.....before a
comprehensive restructuring of the amateur service operating
privileges and frequencies is undertaken".

Note carefully those FCC words ... "modern technologies" ...
"comprehensive restructuring" ... I think they were carefully
and deliberately chosen phrases. It shocks me that the ARRL
re-farming petition scarcely give lip service to the advancement
of technology, but whined pathetically about "critical overcrowding"
in the HF allocations.

>absolutely mandates that no one but a RACES person is allowed on a RACES
>net.

Kim:

Which happens to be the truth. You yourself quoted the chapter(s)
of Part 97 that spell this out. Here it is again:

>Sec. 97.407 Radio amateur civil emergency service.
> (a) No station may transmit in RACES unless it is an FCC-licensed
>primary, club, or military recreation station and it is certified by a
>civil defense organization as registered with that organization, or it
>is an FCC-licensed RACES station.

>So, I was hoping that you would respond, completely unprovoked by my
>mentioning any prior history between you and I, and I am also curious to see
>what others' responses to the post will be.

I didn't see Phil say anything that validated your position.

>It just points up the fact that we *all* (yeah, Jim/N2EY, *ALL* meaning
>majority/most) interpret the rules differently and that is our own personal
>decisions as to how we interpret them--*until* we are in front of the FCC.

In this case, the rules are so clear that there is really only one
interpretation. A RACES station is what the FCC says it is, and the local
civil defense officials who control RACES nets in any given area have
the FCC-mandated authority to limit participation in their nets only to
the local amateurs who are certified members of their organization.
This is crystal clear, not the least bit "gray," and is solidly enforceable.
The only people who would conceivably have a problem with this is
someone who can't break into the local RACES organization for one
reason or another, and is thus being denied another patch on their
official International Orange Ham Hero™ uniform jumpsuit.

Why would you want to be involved in RACES anyway? If you are
truly interested in local ham radio emergency communications service,
ARES is where the action should be.

>
>Regarding (a), what do you all think? Can a RACES organization make its
>rules on whom may and may not transmit during their RACES nets?

Kim:

No, the FCC made the rule. You just quoted it. What a RACES
organization can do is to determine *which* stations may participate
in their nets, as a result of being duly authorized members of the
civil defense organization operating under the RACES rules.

> I have
>heard this debated all over the place and have RACES organizations here that
>allow "just anyone" to enter their nets; and those who allow no one but
>their own organization's participants. By "their own" I mean, literally,
>*only* those RACES stations who are authorized by the city in which they
>live/work.

That would seem to be a reasonable limitation. Remember, RACES is a
specialized adjunct to the Amateur Radio Service, and is dedicated solely
to emergency communications. RACES exists in order to permit State
and Federal civil defense agencies to intercommunicate with amateur
radio stations that are duly authorized members of their *local* civil
defense organization(s). It is a small, very unique, and highly
specialized aspect of the overall amateur radio emergency communications
capability. The majority of amateur radio emergency communications
falls under the ARES banner. RACES organizations have, by authority
of the FCC, the ability to limit participation in their local nets to only
locally
certified amateur radio operators, in addition to other authorized stations.

>Regarding (c)(2) and (4), does this mean that any amateur who with a civil
>defense organization--regardless of their affiliation with the particular
>RACES organization--can communicate/transmit on any RACES net?

Not the way I read it. A ham who is a certified RACES member in Buffalo, NY
would not be able to just join in on an ongoing RACES net operation in
Baltimore, MD just because he is a RACES member *somewhere* in the U.S.

>And, (4)
>pretty much covers any amateur at a station of the Red Cross, etc., right?

Only if that Red Cross amateur station is certified with the civil defense
organization with which it intends to communicate *as* a RACES station.

>So, what would be "legal" about a RACES net control saying to that person
>that they cannot enter the net because they are not recognized by that
>particular RACES organization.

The fact that the FCC specifically permits this limitation.

>Overall, if the R&R are to be followed, to the letter, is it OK for a RACES
>organization to allow anyone onto their nets?

No. They would only allow stations who are certified at their own local
level.

You seem to be looking for some kind of loophole through which to
drive your station into a RACES net, without actually *being* a certified
RACES station. I would suggest that it would be better for you to simply
operate within the rules. If you want to be a RACES station, then join

the local civil defense organization that runs RACES in your area, and go through their certification process. I would think that anyone with the extensive amateur radio emergency communications training that you claim to have should instinctively know this.

Ed, some commercial HF-access radio services did require
morse code test license exams. That depended on the kind of
commercial radio service. Maritime radio is an example.

There's some sub-bands reserved for radio astronomy, where
no one is allowed to transmit. So no interference to astronomers
observing natural radio emissions from deep space.

The fact that they won't have their own license anymore is more than "a different coat of paint." It's non-existance.

There will be little difference between a former races organization and ANY radio club which volunteers in disasters - except that the radio club may have its OWN license while the races organization can't.

Without a license, it's a disavowed entity type.

It would be like our recent restructuring but not allowing novice licensees to renew: The HF subbands would still be there, but (ignoring Tech+HF for the moment) there would be no one for which those rules would apply to.

ARES is the ARRL's delusion that they are doing something helpful. There is no
guarentee that anyone in ARES has contact to any emergency organization.

RACES was organized directly by the local governments, presumedly directly under the agencies which would be providing emergency assistance. Direct oversight guarenteed contact with government (or other aid organizations).

>However, I would hope that the Morse folks would "give new
>things a chance" and honor a gentleman's agreement, as Jim proposed ...

At least as well as on the 'phone subbands.

There are also practical angles to all of this.

Suppose we wish to try out a new mode - say, some sort of PSK-based digital voice. (Let's not bog down in the new mode's details). I can imagine all sorts of situations where it would be useful to first establish contact on, say, PSK31, then switch over to the new mode on the same frequency using the same rig/antenna setup. With SDRs this would be a natural way to do things. Direct A/B comparisons between modulation and encoding schemes could be very useful - but only if they could be used in the digital subbands. Ruling out all but "new" modes from the subbands would hamper such things. Not good. Requiring auto-power-control would effectively prohibit almost all of the existing common amateur digital modes (like PSK31) from the subbands. Again, not good.

FCC is looking to simplify the rules, not complicate them. So how about this:

1) Phone bands stay as they are.
2) Existing Novices and Tech Pluses get access to all the non-phone non-Extra HF/MF amateur spectrum with the same power as today (nobody loses)
3) The 80, 40 and 15 meter "Novice" bands become the "digital" subbands. All modes allowed except analog voice and image. The current bandwidth/data rate/symbol rate regs do not apply in those subbands. Want to develop "PSK10" or "Pactor 3" or digital voice? Have at it!

I don't want to limit digital mode data rate in the proposed digital subbands.
Sorry if it wasn't clear.

I wouldn't, but the "test" emissions the FCC's talking about in 97.305(b) are defined in 97.3(c)(9) as "emissions containing no information having the designators with N as the third symbol." Hard to see how the 97.305(b) restriction on such emissions would actually keep anyone from desigining and implementing a new modulation scheme.

There is such a segment of the spectrum. It's called the ham bands. People have been using it for years to meet for extended test, debug, and prove-in of ideas.

If there is insufficient experimentation in ham radio it's not because hams lack a dedicated subband in which to experiement.

Larry, you are the mutually exclusive personality here, not me. I don't care what emergency communication group there is. Also, since you didn't get it, there are people who will argue that the FCC R&R are clear that only *RACES* stations may be on a *RACES* net. I think the R&R are quite clear in stating that is not true--that it is up to the individual RACES officials as to how they wish to run their nets.

You're hilarious, Larry. You say the above, yet you also say in another
post:

"Why would you want to be involved in RACES anyway? If you are
truly interested in local ham radio emergency communications service,
ARES is where the action should be."

>
> The majority of amateur radio emergency communications
> falls under the ARES banner.
>

Maybe in *your* area that is true. In the immediate area of the City of
Dallas/Dallas County, there are no ARES organizations at all. Here in
Kaufman County, we are a RACES County; in Parker County emergency
communication is provided by ARES; Denton County is ARES (I think); Tarrant

County (Ft. Worth) is RACES; Ellis County is RACES. RACES provides the
majority of amateur radio emergency communication here.

>
> RACES organizations have, by authority
> of the FCC, the ability to limit participation in their local nets to only
> locally certified amateur radio operators, in addition to other authorized
> stations.
>

That's what I also believe the R&R to say. However, there are folks who
will argue that RACES organizations have *no* authority to allow "other
authorized stations" onto their nets.

> >
> >Regarding (c)(2) and (4), does this mean that any amateur who with a
civil

NY
> would not be able to just join in on an ongoing RACES net operation in
> Baltimore, MD just because he is a RACES member *somewhere* in the U.S.
>

And, I am on the other side of that argument, Larry. I believe the FCC R&R
say with implication that a RACES official of any RACES organization can
make the decision to allow, or not, any station identifying themselves as a
RACES station--regardless of affiliation. I believe the FCC R&R go even
further in that a RACES official can make the decision to allow *any* legal
station onto their net.

And, here's the kicker: if you believe as you do, above, then there are
RACES organizations all over the US who are operating illegally during nets.
Our own Hunt County here in Texas will accept any station who identifies
themselves as RACES. If I wish to enter a Hunt County RACES net, I key up
and identify as "W5TIT, Kaufman County RACES." Hunt County also allows
any station onto their RACES nets, although this is less common as not
many people are willing to travel to the "boondocks" for the sake of normal
storm spotting.

>
> >So, what would be "legal" about a RACES net control saying to that person
> >that they cannot enter the net because they are not recognized by that
> >particular RACES organization.
>
> The fact that the FCC specifically permits this limitation.
>

I don't think so. And, I think Phil's post backs that up.

> >
> >Overall, if the R&R are to be followed, to the letter, is it OK for a
RACES
> >organization to allow anyone onto their nets?
>
> No. They would only allow stations who are certified at their own local
> level.
>

Then, as I said, there are RACES organizations all over the US operating
illegally.

>
> You seem to be looking for some kind of loophole through which to
> drive your station into a RACES net, without actually *being* a certified
> RACES station.
>

If you're speaking of me, personally, hardly. I am already a member of two
RACES organizations (Kaufman and Hunt). What my end of the debate stems
from is in being as accurate as we can, as amateurs, when we say stuff on
the air. For an official RACES net control to specifically state that it is
because of FCC R&R that they do not allow other non-RACES stations onto
their net is a bit of stretch to me.

>
> I would suggest that it would be better for you to simply
> operate within the rules. If you want to be a RACES station, then join

>Is that a direct quote, Jim?

Here's a direct quote:

BEGIN DIRECT QUOTE:

In article <3cb24b00$1_1@newsa.ev1.net>, "Kim" <seventythree@eightyeight.net>
writes:

>Anyway, the
>reason Riley would not have a problem with me working on all bands is I've
>done all bands in the presence of control ops, lots of times.

END DIRECT QUOTE

>> Just the generally-agreed upon ones. "Traveled a lot" is pretty vague.
>>"All HF
>> amateur bands" is well-defined. It means 80, 40, 30, 20, 17, 15, 12, and
>>10
>> meters. Some people even include 160, but 160 is actually an MF band.

>
>The reason I asked if it was a direct quote is because on one hand you say "
>been on all bands, lots of times," yet the next paragraph--the one right
>above--you state "All HF amateur bands," so which is it?

The context of the conversation was the amateur HF bands. I'm cutting you a
break by not holding you to the literal meaning of all bands.

>> >Just as Jim wants me to meet his definition of "all"
>> >in all bands.

>> Not my definition. The generally accepted definition. "All" as in "each
>>and
>> every, no exceptions"

>I think, as usual Jim, you are having a nut over semantics.

I have no idea what "having a nut" means.

But I do know what the definition of "all" is.

>> > Like I said, my all is different from his all.
>>
>> And different from everyone else's "all"

>> >Wonder why he
>> >didn't choose any of the Ghz stuff (I've never been there, either), and

>> Because the context was HF amateur bands.
>
>I don't know, Jim, you seem pretty confused above.

Not me.

> See...there is an
>advantage to being vague and unprecise. At least I don't become confused
>about what I said. You obviously have.

Nope. See the direct quote, above.

>> >You keep clinging to your semantics, you and Jim.

>> That's a good thing.

>> >It's your dislike of
>> >someone that determines your attitude...not the content of their
>material.
>>
>> Just the opposite. It's the content of your material that determines our
>> attitude.
>>
>> You post things that appear to be incorrect. When questioned on the
>details you
>> get angry at the questioner for even daring to point out that you might
>have
>> made a mistake, or written something that doesn't make sense.

>Uh, Jim.

Yes?

> Before you start saying things like "you post things that appear
>to be incorrect" and "when questioned on the details," you need to be able
>to figger things out first, K?

I have no idea what "K" is supposed to mean in that sentence.

But I have figured out that you sometimes sometimes post here without careful
consideration of the meaning of what you write, or of possible mistakes and
contradictions. Then when these things are pointed out, you argue with the

person who pointed them out. It's called "blaming the messenger". Often your attacks degrade into making fun of people's names, age, etc.
>
>As to being angry? Do you really think my life is *that* simple?

Sure seems like it.

You took about a week and several go-arounds to answer a very simple question ("What mode did you use on 30 meters?" - exact quote) rather than simply saying 'I don't remember' or 'I've never been on 30 meters'.

I could also mention that back on January 3 of this year you wrote that you had never been on any amateur band below 25 MHz, but that's old stuff.

No, that is not true. The only thing that has changed is that there will no more RACES station licenses, and that is it. There will continue to be City, State, and County civil defense organizations who include RACES in their regimen for emergency response operations. There will continue to be RACES organizations and they will continue to operate under the same R&R as always. And, FEMA will continue to be the "mother" organization of RACES.

>
> There will be little difference between a former races organization and
ANY

>

That exists now, thanks to the hard work of many amateurs. There are harline RACES folks and hardline ARES folks, but the truth is that the two organizations have actually been hard to distinguish over the last few years...as emergency communication in amateur radio has begun to take itself more seriously. There are still the folks who love the label "wannabe," but they are also on the fringe of most ham radio organizations anyway.

>
> Without a license, it's a disavowed entity type.
>

THAT is sooooo wrong. You are absolutely wrong in your assessment of this. As stated, the *only* thing that is changing is that the FCC will issue no more RACES station licenses. That's it, nothing more. To say what you said above is to also say that Restructuring was the end of ham radio. Maybe you are one of those people who believes that, but you couldn't be further from the truth.

>
> It would be like our recent restructuring but not allowing novice
licensees to
> renew: The HF subbands would still be there, but (ignoring Tech+HF for
the

>

Ya can't "ignore" something that is there just to make your statement true. And refarming of bands isn't quite the same as saying something won't exist any more...hardly so. I challenge you to write to any Emergency Operations officials of your city, state, or county, and ask them if they will be changing a thing about their RACES organization. In fact, I don't care if you write to any or all city, state, or county organizations. You'll get the answer that they will continue as always...either RACES or ARES...whichever the case may be. And, in some really progressive and politically benign areas, both!

Then, you don't know Jim very well. Jim probably has a predetermined percentage that, for him, defines "most." Here's some other alls I've done:

I have worked all my life
I have traveled all my life
I like all stormy weather
I like all animals
I like all people
I like all little babies
I like all nature scents

Like most of us, Stacey, I am sure you are capable of automatically knowing that, when someone says they have "worked all their life," they don't mean even when they were an infant and small child. I am certain that when someone says they have traveled "all their life," you don't take that to mean they've never stopped traveling.

Most of us, Stacey, don't hold each other to the fire whenever we make comments. If you said to me, "I have worked all bands" it would never even cross my mind to even question your definition of that. Unless, as is the case with Jim, you were one of those people I don't like. Don't know how long you've been reading the newsgroup, but you'll see that when all else fails and we just plain don't like someone or what they said, people get their dictionaries, slide rules, and thesauruses out.

"Type accepted" was not the right choice of words. I apologize for not being
more
clear.

Here's my concern:

Part of Hans' proposal would require automatic power-level control as part of any mode used in the proposed "experimental" subbands. This would effectively ban almost all modes now used by hams on HF/MF. Most of the equipment now used by hams on HF/MF would also be banned from use in those subbands, too.

Shouldn't matter whether I know Jim or not. What matters is, I know
the difference between the meaning of "all" and "most". Most of
-all-, I know what mode(s) are used on 30 meters, you have yet to
demonstrate you have knowledge of that, without dodging the question,
"what mode did you operate on 30 meters?"

>I have worked all my life
>I have traveled all my life

Then you should have said "I've operated on most of the HF bands",
instead of saying "all". "All" and "most" don't mean the same thing,
as you've pointed out above.

That's why there's an award called "Worked ALL States Awared", not
"Worked Some Of The States Award" or "Most Of The States".

>

If you can't answer a simple question, be prepared to be held to the
fire.

Since I don't have an antenna for 160 meters, I don't go on ham radio
newsgroups saying I've "worked all bands", and dodge and weave for a

week when asked "What mode did you operate on 30 meters?".

If one has a Tech Plus license, no reason why they shouldn't just go
for the Extra, since the "dumbing down" of ham radio took place 2
years ago.

Good point. Even SS is decades old--somebody named Hedy
Lamarr back in the 40's???

What would be the value of experimenting with SS in 5KHz
slivers, or does SS imply band hopping too ie.
pseudo-simultaneously transmitting on 80,40,15, and 10
meters?

I think the opposite stance is appropriate. Let
everything be permitted!, at least in the 3675 to 3725,
7100 to 7150, 21100 to 21200, and 28100 to 28500 KHz
subbands. Perhaps there should be some restrictions on max.
power, and using private encoding schemes, but nothing more.

1. This would avoid the contentious and divisive attempts at
defining what is legacy and what is new.

2. This would be a pilot program for complete deregulation
of the HF bands which fits nicely with the FCC policies.

3. This would be a demonstration that the ARS is capable of
policing itself, which fits nicely with the FCC policies.

4. This would provide a proving ground for development of
new modes with little or no restrictions.

Maybe some Tech+'s have reasons beyond your comprehension. Why would
a person perfectly satisfied with his/her privileges want to upgrade?

In article <3CC196B1.2327EA0B@worldnet.att.net>, Clay N4AOX
<wyn@worldnet.att.net> writes:

>Good point. Even SS is decades old--somebody named Hedy
>Lamarr back in the 40's???

"Hedvig Markey" is on the patent award...as co-inventor of a
torpedo guidance system, not, repeat NOT, for "inventing
spread spectrum" in any form. Hedy's former husband was a
manufacturer of torpedos in Germany in the 1930s.

The invention was never used but came to public attention through
the IEEE and an article in SPECTRUM, the IEEE membership
magazine (which had a copy of the cover page, invention
description, and a PR photo of Ms. Lamarr).

If that guidance-control system was a precursor to spread
spectrum, then SS is "predated" by nearly every previous patent
on other frequency-multiplexed control systems and the old
long-lines "carrier" equipment. As usual, a reporter who didn't
know merde from boot polish connected one and one and got
five to use an almost buzzphrase of "spread spectrum."

That bastardy of journalism is on par with "filler" news stories
invented to fill word space (journalistic justification for existance)
such as the reputed "morse key in the space shuttle as a last-
resort emergency item tucked away in a remote corner of the
vehicle." Ain't no such morse key on the shuttle, never was, but
PCTAs have to seize such falsities to justify their prides and
egos. Nobody has confirmed the "MV Oak sinking" on New
Year's Eve...another bit of invented word fluff.

>What would be the value of experimenting with SS in 5KHz
>slivers, or does SS imply band hopping too ie.
>pseudo-simultaneously transmitting on 80,40,15, and 10
>meters?

Spread spectrum is not a legacy mode, can never be in the
minds of some amateurs who were brought up on amateur radio
being a bastion of morsemanship as the best that they can be.

Agile frequency-hoppers can easily go HF band-to-band using
some types of spread spectrum. It's already been done but
no one seems to have identified it or understood it. :-)

I go by the generally accepted definition of "most". Now if someone said they
had worked most of the amateur HF bands but in fact had only been on two or
three of them, I'd say they were mistaken in using the word "most". Wouldn't
you?

>Here's some other alls I've done:

And like most of us, Stacey, I am sure that when someone says they've been on all the amateur HF bands, you don't think they mean some of the bands or most of the bands. You think, like, almost all of us, they mean ALL the amateur HF bands - each and every one.
>
>Most of us, Stacey, don't hold each other to the fire whenever we make

Then perhaps Kim was using "all" in the sense of "I'm all ears".

OK, I'm adaptable.

How about this. Retain the current absolute power limit of 200W in those sub-bands. Further, any transmitter adjusted for more than 50W output must include auto-adaptive devices to hold power to the minimum needed for reliable communications. Then you *could* use your current Yaesu, Icom, Heathkit, or whatever, but you'd need to crank the output down to 50W. The idea is to encourage experimentation with pro-active power reduction to reduce congestion.

Without the resources of Chris Imlay, most of us out here in the real world don't have the capability to get an STA to try anything really new or novel on the air. It is somewhat disappointing that the two people tossing cold water on my idea here are ARRL HQ guys, W1RFI and KE3Z. Quite frankly, I'd expected my most enthusiastic support from them.

With all kind wishes,

That seems to be the "pat answer" out of your vicinity on this topic.

Of course, if _you_ want to try something new and novel, I'm sure K1ZZ will
give Chris Imlay an assignment to write an STA request. Us
plain-brown-rrap'ers don't seem to have that sort of clout.

Now why are you _really_ tossing cold water on the idea?

With all kind wishes,

> Perhaps there should be some restrictions on max.
>power, and using private encoding schemes, but nothing more.

Max power of 200 watts is already in place for all of those except 10 meters.
The use of private (i.e. secret) encoding schemes by hams is already
prohibited.

>1. This would avoid the contentious and divisive attempts at
>defining what is legacy and what is new.

Exactly. Is a new version of PSK31 legacy or new?

>2. This would be a pilot program for complete deregulation
>of the HF bands which fits nicely with the FCC policies.

My first reaction is NO WAY!!! If absolutely everything that will fit in the
subband was allowed there, we'd probably have either chaos or what would amount
to a widening of the 'phone subbands. Might be an embarrassing demo of what
would result from total mode deregulation.

>3. This would be a demonstration that the ARS is capable of
>policing itself, which fits nicely with the FCC policies.

Maybe - or it could be an embarrassment if it turns into something like 3950,
14313 or the 'NUT repeater, rather than a haven for new modes.

Nope.

I want a place where hams can showcase only "truly new" ideas, things that
today would require an STA before we could stoke up a transmitter.

And I want that place to be "visible" to other hams who might be interested
by innovation and progress, not cluttered up with signals from legacy modes.

If those segments remain empty then maybe we will have also sent a signal to
the regulators, but I'm betting that QEX subscribers would come flocking.

Stacey,

Where'd you get that idea? Please quote chapter/verse of Part 97.

Anyone can operate another hams station without that person
being present as long as they operate within their individual
privileges. I am an Extra, I can leave a novice "home alone"
at my station and he can operate that station with his call
sign all he wants as long as he operates within Novice
proivileges while I am not there.

Cheers,
Bill K2UNK

Aw, and here I was about to tell you that it was good to see another YL on the newsgroup. Actually it is, even if you will be among the ranks of those who think they are holding others "to the fire." ROFLMAO...I have no idea if I've been on 30M or not, Stacey. I can tell you that I've never been on any digital modes, except for the couple of times that I've had CW QSOs (yep, there I go again with ambiguities...can you handle it?) I also know that I was not on 30M either of those two times because both times I was within *my* operating privileges.

I also have a tendency to stare at all the stars every night.

must
> be certificated.

Additionally, there is a clear "maximum" power level for
hams and no equipment capable of operating at or near
maximum power is required to be type accepted... other
than the limited situation Ed W1RFI notes.

There was a time that novices were required to ONLY
use crystal control...no type acceptance was needed
then. Bottom line (IMHO) is that we can and do have
technical ruyles which ham equipment is expected to be operated
within...but that doesn't require type acceptance and (except
for Ed's noted exception) never has.

CECIL!! LOL, because *THAT* is different! ;)

Kim W5TIT, staring at all the grass blades in my front yard. But, of course, what's the definition of a yard? My "yard" is actually just an old cow pasture. So, let's see, there's probably not really one blade of grass in the front yard. Oh wait, I may neither have a yard or any blades of grass. OHMYGAWD...I am soooooo confused...

It's much easier, for the sake of time and convenience to just say, I am staring at all the grass blades in my front yard than to try and define for JimtheAnalRetentiveCritic what, exactly, does grow in out the front door of my house...or is that actually the back door since it points toward no main road. Hmmmm, what *is* the front of house?

Then explain this: How does one have a "radio service" without anyone having a
license for that service? RACES stands for "radio amateur communications
emergency service." My point is: Without the separate RACES license, there is
no difference between RACES and the amateur radio service at all. Without the
license, there is no such thing as a RACES station or a RACES net. It's ALL
amateur radio without distinction. [It's also not a service where licensing
isn't required....]

>further from the truth.

Then what is the distinction between RACES and an organized collection of licensed radio amateurs? I say that there is NONE - and by that fact, RACES has effectively disappeared.

The FCC's non-renewal of RACES station licenses was like pulling out the bottom card from a house of cards. As soon as the last such station has its license expired, the house of cards collapses.

I have never said that restructuring was the end of amateur radio.

>> It would be like our recent restructuring but not allowing novice
>licensees to
>> renew: The HF subbands would still be there, but (ignoring Tech+HF for

>the answer that they will continue as always...either RACES or
>ARES...whichever the case may be. And, in some really progressive and
>politically benign areas, both!

There's one thing you missed: Some of those RACES organizations themselves won't be valid anymore. The establishment of RACES stations did NOT require that the trustee (i.e. person in charge) hold an amateur radio license. With RACES licenses gone, these people no longer have the operating authority to contact their amateur support group over the air. This means that the former trustee (either himself or by his replacement) must now hold an amateur license - and CANCELS OUT the distinction between RACES and merely an organized group of amateurs.

>How about this. Retain the current absolute power limit of 200W in those >sub-bands.

Yup.

>Further, any transmitter adjusted for more than 50W output must >include auto-adaptive devices to hold power to the minimum needed for >reliable communications.

Double yup.

>Then you *could* use your current Yaesu, Icom, >Heathkit, or whatever, but you'd need to crank the output down to 50W.

Which you'd probably have to do anyway if the digital mode has a high duty cycle.

Doubleplus yup.

>The >idea is to encourage experimentation with pro-active power reduction to >reduce congestion.

Of course.

This scheme is better than both the original 'all must adapt' idea and the 'no limits' idea. It permits the use of existing rigs and also offers an incentive to include power control.

If ya want a REAL incentive, make it 1500 W peak power in the subbands if you have automatic power control and ~100 W without automatic power control. For all modes. BWAAAHAAAAHAAA!

That problem's fixed, as I see it. Thanks, Hans.

--

Now just allow all non-analog-voice modes and the thing will fly.

So far, the only rationale you've put forth as the need for this proposal
is a flawed understanding of what the FCC rules permit.

If experimentation with new modes cannot be done now, how is it that new
modes keep springing up?

That may be your rule, but it's not an FCC rule.

I hold 3 stations licenses for K0HB, K0RT, and W0EF. It is routine for all three stations to be on the air at the same time during contests, etc., and I need not be present at any of them. Nothing in the FCC rules requires me to be at any of those stations so long as the operator at the controls is operating within the bounds of his own operator license.

Even assuming an STA were needed, most of the STAs I'm aware of were
obtained by individuals who simply wrote a letter requesting one. No
"clout" involved. For example:
http://www.tapr.org/tapr/html/Fss.buasssta.html

The FCC disagree's with your "regarded opinion".

Liability has nothing to do with this; but the FCC would be held
liable if they didn't issue Notice's Of Proprosed Rulemaking, with a
set time limit for Public Comments.

If an overwhelming majority agree with a new proprosed rule, it
becomes set in stone, otherwise it gets tossed as "not a good idea
anyway".

I'd rather hear about the weather, or traffic reports, or any other
interesting conversation, than hearing someone fumbling around with an
autopatch to order a pizza, when they've got a cell phone laying next
to them.

To each their own.

Actually, it's within the bounds of the station license. As an
example, if I volunteered to fill in one hour on a "Novice station"
during Field Day, I can't operate in the Extra class part of the band,
because I would jeopardize the station license for which that Novice
class station is permitted to operate. With an Extra class license I
could, if I used my callsign, but it's not the callsign designated as
the "Novice Station" license.

You can bend the rules all you want, you can interpret them any way
you like, but there's no gray matter when it comes to the explicit FCC
Part 97 rulebook.

I believe you are mistaken. 97.105(b) grants priveleges based on the class of OPERATOR LICENSE held by the control operator. If you are absent from your station and have granted your dad the temporary control of the station, then his OPERATOR license determines his privileges, not your station license.

> As an example, if I volunteered to fill in one hour on a "Novice station"

Let's for the moment presume a fictitious Novice holds a station license with the callsign KN7XXX, and he gives you (an Extra licensee) permission to fill in while he takes a potty break. You are free to use his novice station on any frequency available to any license class up to your license class (Extra). The only requirement (paragraph 97.119(e) refers) is that you would have to sign "KN7XXX/AA7YA" if you transmitted outside the Novice sub-bands.

Don't know how it is in other parts of the country, but here in
Oregon RACES and ARES are one organization. To get into it you
have to meet its requirements of both.

So? RACES stations must have a licensed radio operator as the control operator anyhow. The only difference will be which call sign is being used. The RACES organization is not being abolished.

Nothing will prevent the formation and licensing of a "Podunk RACES Operator Amateur Radio Club", retaining the former RACES station call sign under the "vanity" program. In our local ARES/RACES setups, several clubs have assumed the responsibility of providing equipment and operators at various institutions, under the control of the County Emergency Manager who runs RACES (and is a ham himself).

The intent, similar to the elimination of Military Recreation Stations a while back, is to eliminate amateur station licenses issued to non-amateur radio personnel or organizations.

>Without a license, it's a disavowed entity type.

Say that again in English.....

More and more jurisdictions are integrating one into the other, so
ARES members get emergency radio training as RACES members. The
advantage of that is that there is no limitation on the type of
events that ARES can provide service for, and our unit does a LOT of
that.

For continuing authorization, our unit requires checking into the
weekly County net or the daily Regional net at least once a month,
attending four monthly meetings or class/training sessions each
year, and participating in at least one "hands-on" exercise each
year.

Which are you signed up for? What do they require?

> Which are you signed up for? What do they require?

I'm currently involved in neither.

From 1993-1998, I was an operator on call for a federal facility (local VA hospital). We were only called out once - On January 16, 1994 - for the Northridge, CA earthquake. Our facility was not hit, but the next one over (Sepulveda) was within 3 miles of the epicenter. The only "emergency" thing we did was at the direction of the VA police: Their radio equipment couldn't reach the Sepulveda facility and telco was down. Using our equipment (better than their puny 5w HT's), we contacted the other facility to arrange for patient transfer. That's it.

The primary way I give to the community is by being a volunteer examiner.

Around these parts (Los Angeles), I find that most of the radio operators who "volunteer" for the County's DCS program are self-important, arrogant idiots (some of whom are suspected of having bought their licenses); at least the ones I know, except for two: One being the sheriff deputy who ran the program until 2000 (I believe he was rotated to another job that year), and another who works on LAPD radios at Piper Tech.

Without the license, there is no such thing as a RACES station. There is only "amateur stations participating in RACES" at best. Remember that a RACES station license didn't require an amateur licensed trustee and that trustee (or anyone else in the CD organization) could operate [only] that station (unless he was also licensed). There is a difference here.

The more I study this issue, the more I agree with Hans' comments, with some notable exceptions.

First, the "refarming" item in the petition should be set aside or preempted because it is potentially too important to be in a mixed bag with SS at 222 MHz, CW vs MCW for computer ID, 1 X 1 calls, and 33 cm pps in CO and WY. The FCC should invite the ARRL to resubmit the "refarming" item in a separate petition.

Second, the "refarming" part of the ARRL petition seems to fly in the face of the reasons stated in WT Docket 98-143 for restructuring and removing (essentially) code testing requirements for HF operation. The "refarming" is obviously a consequence of devaluing Morse CW operation in HF. So, refarming should attempt to meet the loftier goals stated by the FCC in 98-143. Just providing additional room for legacy operating modes does not seem to do that. It would appear that Morse CW is simply being sacrificed for SSB phone in HF bands. [Jon's statements above also seem to contradict Imlay's reasoning at other places within the ARRL petition, namely justification for SS in the 222-225 MHz band.]

IMHO, the weakness in Hans' proposal, comes in trying to define what is "legacy" and what is "new" in his section II-b. To borrow Chairman Powell's phrase, the current communication technology development is "...chaotic...". Attempts to define what is "legacy" and what is "new" is futile and can be counterproductive. This show stopper can be avoided by allowing any and all forms of communication technology within the bounds of a minimum of regulation to occur within these "experimental reservations".

Both Chairman Kennard, and Chairman Powell have testified before congress that an important action item in the model

of an "FCC for the 21st Century" is deregulation. Powell stated "The fundamental mission of the FCC is ...competition, innovation, deregulation...". Here is an opportunity for the FCC to execute a pilot study of deregulation and demonstate user self-regulation, by minimization of all regulations for operation in these subbands.

As such, I would modify Hans's II-b to substitute "all communications methods". I would propose to modify II.c.,Hans' power limits, to 100 watts peak output with a view toward minimizing spectrum RF power density.

Notes:

If Note 4) or Note 2) are not listed, the band limits are Doppler-shifted frequencies corresponding to radial velocities of +/- 300 km/s (consistent with line radiation occurring in our galaxy).

An extension to lower frequencies of the allocation of 1400-1427 MHz is required to allow for the Doppler shifts for HI observed in distant galaxies.

The current international allocation is not primary and/or does not meet bandwidth requirements. See: ITU-R Radio Regulations (Table 8) for more

detailed information.

Because these line frequencies are also being used for observing other galaxies, the listed bandwidths include Doppler shifts corresponding to radial velocities of up to 1000 km/s. It should be noted that HI has been observed at frequencies redshifted to 500 MHz, while some lines of the most abundant molecules have been detected in galaxies with velocities up to 50 000 km/s, corresponding to a frequency reduction of up to 17%.

There are six closely spaced lines associated with this molecule at this frequency. The listed band is wide enough to permit observations of all six lines.

This line is not mentioned in Article 8 of the ITU-R Radio Regulations.

I suppose. Hey, I'll bet even Steve took a code test once. Not that you'd know it.

When I sit at the radio Cliff bought, and that I consider his, if I am on it
without him around, I operate it as my station and only stay in the Tech+
portion of 10M. Quite legal...

As I understand it, the RACES licenses that were issued were more issued as
station appointments than anything. In other words, a local EOC, a RACES
Radio Officer maybe, or something like that. Were individuals issued RACES

licesnes, separate from their radio amateur licenses?

In Hunt County, I know there is no RACES license that is called on the air. And, when a RACES net is in operation, it is at the direction of the County EOC, with whom the relationship has been established. There is s *distinct* difference (well, used to be--not so much any more) between RACES and ARES. The Radio Amateur Civil Emergency Service is established throughout this country--but doesn't necessarily *have* to be the service of choice for emergencies. In other words, the exact same service *could* be provided through ARES. An ARES organization could even require background checks, if that is how the served agencies wish to establish their relationship with radio amateur provided communication.

With regard to the inherrent issue of the Presidential War Powers Act, RACES is specifically targeted, is still established (with or without existing licenses) and is still organized at the direction of city, county, and state officials. The fact that the FCC will no longer be issuing RACES licenses does not change the established relationship between RACES and its served agencies.

>

The distinction between the two, specifically, is which one is recognized officially by the served agencies? If the City of Dallas recognizes RACES as the only amateur organization from which they will seek emergency communication, then RACES it is. If they choose ARES, then it is ARES. In some locales, there is enough trust established between the two organizations that ARES works side by side with RACES, yet RACES is the organization to which the nod goes for items such as entry into restricted areas, etc. That does *not* have to be the case. As I said, the controlling functions can decide that they want their ARES members to have background checks.

They will be no less valid if they are still the organization of choice by the official decision makers for our city, county, state, and even federal government. And, I seriously doubt that you will see any change in status for RACES.

>

>

You mean someone such as a governmental emergency management official that may not have an amateur license? That's an interesting point. *However* in the FCC R&R, is it not already established that a person with a civil defense organization is allowed to enter a RACES net? I believe the new language accommodates such interaction between an agency and the RACES net. I may be wrong. I can only relate what happens around here with RACES, and here everyone on a RACES is a licensed amateur as well. I never even *heard* of "RACES licenses" until I heard they were taking them away...

I don't think there's going to be a drastic change in RACES served agencies just because the licensing is "going away."

Kim W5TIT--Interesting conversation by the way...thanks!

Stacey, what are "all bands?"

Do you differentiate between 75M and 80M? Or is it all 80M?

So, now staring at stars brings about some kind of negative connotation, eh?
Wow, you'll fit right into the newsgroup. There are only very opinionated
people here. By the way, it'll piss Jim of to no end for me to tell you
that...no, I didn't "space out" on the 30M question. More, that I realized
the band is set aside for digital modes only and so I must never have been
on that band; as I don't use digital modes. The thing that probably really
pisses Jim and others off--more than anything--is that they couldn't dupe me
into some stupid answer out of ignorance of the 30M set aside. As soon as I
saw the question, I recognized it for the trap it was. That's what they're
pissed at...

Very interesting. Assuming we're talking about *amateur* radio equipment here, for what possible reason would your Extra-class licensed father need you to be present before transmitting? There is certainly no reason I can find in Part 97! Is your father physically disabled, and requires you to physically manipulate the radio controls for him? That's the only thing that comes to mind. Please explain.

Er, no digital...no CW...LOL

Kim W5TIT
****

That seems like a pretty direct answer to me. I said "no digital...no
CW...LOL" so it should have been quite obvious to him that I had probably
never been on 30M.

He didn't like that answer, so:

In article <3cb78636$1_2@newsa.ev1.net>, "Kim"
<seventythree@eightyeight.net>
writes:

I don't understand, Kim.

You wrote:

"I've done all bands in the presence of control ops, lots of times."

The context was HF bands, of course. 30 meters is an HF band.
What mode did you use on 30 meters?

It's a simple question.

73 de Jim, N2EY
****

I guess at some point he is looking for a different answer. There isn't one.

Yep, we forgot about helicopters when we took the airplanes away from the Army in 1947. Everybody wants to be in the Air Force. Army's got helicopters, Navy's got little pointy nosed planes, Marine Corps has both, Coast Guard has C-130's. Someday the Air Force should buy tanks and submarines.

Here's the irony. Try this one on for size...LOL No, Stacey does *not* go on ham radio newgroups saying "I've worked all bands." Nope, sure doesn't. He goes on ham radio newsgroups saying:

"Wrong, my father, also an Extra class operator, can't transmit on my radio equipment without me physically in the shack with him."

Now, the thing here, Stacey, is that I think it's quite petty for me to point out the above. However, I'd also like you to note that you jumped all over the bandwagon with Jim, who's having his fun with semantics.

We are all going to say things in a way that is incorrect. None of us, not even Jim, are precise with every communication we make. When I say I have been on all HF ham bands, it is truly my belief that a) no one except Jim is going to get that analytical with such a comment, b) no one but Jim is going to feel all that compelled to challenge something so idiotic, c) no one but Jim is going to stretch so far to challenge something I say, and d) no one sits there, except Jim, and starts thinking up some smartass trap question for the simple matter of attempting to embarrass someone. Not that I am embarrassed. I stand by what I said. In essence, I have been on all HF ham bands. Nor do I feel compelled to play Jim's game any more.

Stacey, as you may just now be realizing...we all say things that may be off. We do not mean them to be malicious in any way. Some are just so egotistical that they *have* to make a point; however inflated that point may be.

Amateur Radio Newsline™ Report 1288 - April 19 2002

Amateur Radio Newsline report number 1288 with a release date of
Friday, April 19th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Amateur Radio volunteerism is praised at the N-A-B Ham Radio Reception and a Montana senator calls for a change in the way the United States oversees the electromagnetic spectrum. These stories are first on Amateur Radio Newsline report number 1288 coming your way right now.

(Billboard Cart Here)

**

AMERICA AT WAR: HAMS PRAISED AT NAB AMATEUR RADIO MIXER

The heroism of ham radio operators who donate their services in times of national disaster, and especially those who volunteered in the days following the 911 terrorist attacks was not forgotten at this years National Association of Broadcasters Ham Radio Reception. The April 10th gathering was co-hosted by Kenwood Communications and CQ Magazine. It was CQ publisher Dick Ross, K2MGA, who took time to honor those hams who put their lives on hold, to be there when needed:

--
K2MGA: “I do want to take a moment to focus a little bit of attention on how proud we have a right to be as Radio Amateurs. I think we saw that on September 11th, when thousands upon thousands of hams throughout the United States jumped in their cars -- or -- in the New York are -- hopped onto the subways -- with back packs filled with radio equipment and did whatever they could. They are still doing ‘whatever they can,’ and that is really what Amateur Radio is all about.”
--

Ross comments were enthusiastically received. CQ was represented at the gathering by Ross and Editor Rich Moseson, W2VU. Also making presentations were Kenwood’s Paul Middelton K4NUH and ARRL President Jim Haynie, W5JBP. 600 to 800 radio amateurs who attended the NAB convention also usually show up at the Ham Radio Reception.

**

SPECTRUM ISSUES: SENATOR TO ASK FOR COMPLETE SPECTRUM REVIEW

A U-S Senator says that its time to overhaul the method by which the United States manages the entire electromagnetic spectrum. Montana Senator Conrad Burns, said on Monday, April 15th that he plans to introduce such legislation. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

Senator Conrad Burns says that he expects a two to three year battle over the legislation he plans to introduce this congressional season. But Burns also told a packed audience at the recent National Association of Broadcasters Convention in Las Vegas that he is going to put together a total spectrum reform bill because he does not think that Congress should be piecemealing how it makes spectrum available.

Senator Burns told the NAB audience that he predicts an intense battle over the legislation affecting multiple constituencies. He noted that many frequency bands are used by government agencies like the Department of Defense Department. Burns said that he is still awaiting a report from the General Accounting Office which is reviewing a large number of spectrum issues and related government practices.

And what does this mean to ham radio? In the short term probably very little. In the long run it could affect our future survival.

Depending on the scope of the Burns legislation and how much of it -- if any -- is ever enacted by Congress, the future use of all spectrum could well come under a bureaucratic microscope. Those services that legislators do not feel justify spectrum could -- eventually -- loose it.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP

--

Earlier plans to move some government operations to other spectrum now have little support in the wake of the September 11th terrorist attacks. Meantime, numerous telecommunications companies are pressuring the government to make large portions of spectrum available quickly, to introduce new consumer wireless services. (Published reports)

**

HAM RADIO IN SPACE: NEW FRENCH HAMSATS COMING

AMSAT has announced that two new French Amateur Radio mini satellites or picosats are planned for launch on May 3rd. This, as secondary payloads with the SPOT-5 satellite.

The two hamsats are being funded, designed and built by AMSAT-France. They are battery powered and should operate from orbit about 40 days. Both will transmit recorded voice messages using Narrow Band FM along with digital telemetry. Data will be transmitted at 400 baud BPSK. Downlink frequencies are listed as 145.84 MHz and 435.27 MHz.

An Ariane 4 booster will carry the satellites to orbit but the ham radio birds will not be free floating. Rather they will remain fastened to the Ariane’s third stage at a panned altitude of about 800 kilometers. Both of these new birds will switched on about ten days after the launch. (ANS)

**

HAM RADIO IN SPACE: AMSAT-NA TO RE-EVALUATE THE FUTURE

Meantime, AMSAT North America President Robin Haighton, VE3FRH, has called a special Board of Directors meeting for April 20th. This, to review the current fiscal situation and to decide on a proper course of action for upcoming ham radio space projects.

In a published column earlier this year, Haighton had commented that financial support coming to AMSAT for the Eagle satellite and other projects have been reduced as a result 911. Haighton now says that this continues to be the case.

Haighton does say that the design of another satellite called Echo is progressing and he should have more information to make public next month. The AMSAT North America president adds that the organizations forum at the upcoming Dayton Hamvention will offer a closer look at several proposed satellite projects. (ANS)

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N-4-G-G-D Repeater serving Greensboro North Carolina.

(5 sec pause here)

**

ENFORCEMENT NEEDED: WORLDWIDE QRM TO 40 METERS

The March issue of the Monitoring System Newsletter talked about a rogue broadcast from Eritrea on 7.100 Mhz. A transmission that continues to be heard well in eastern North America.

According to the IARU, this broadcast can at times also be heard around the world. Also, the report says that its lower sideband can dominate the top few kilohertz of the 7.000 to 7.100 MHz Amateur band. (ANS)

**

ENFORCEMENT: FCC ARRESTS NYC UNLICENSED BROADCASTER

An unlicensed broadcaster has been arrested for refusing to shut down operations. Paul Dorleans was taken into federal custody on April 15th for operating an unlicensed FM radio station on 87.9 MHz in Brooklyn New York.

The FCC says that earlier enforcement actions had failed to discourage Dorleans’ unlicensed operation of the FM Station. The FCC, on more than one occasion, had issued notices to Dorleans directing him to cease operation. And the U.S. Marshal’s Service, in conjunction with the United States Attorney’s Office and the FCC, had seized his radio equipment on one previous occasion.

The United States Marshals Service arrested Dorleans working in conjunction with FCC Agents and the Office of the United States Attorney for the Eastern District of New York. So far this year, investigation of unlicensed broadcast operation by the FCC’s Enforcement Bureau has resulted in the shutdown of

over 20 unlicensed stations. Dorleans faces the possibility of a heavy fine and a prison sentence if convicted. (FCC Release)

**

ENFORCEMENT: FCC TO UTILITIES - DON’T INTERFERE WITH HAMS

The FCC has issued letters to five power utility companies to request that they contact and work with Amateur Radio operators in the area to resolve power line interference problems. According to FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth the utility companies are:

--
Hollingsworth: “Anderson Indiana City Utility, the Dominion Power Company in Richmond Virginia, Northeast Utilities in Berlin Connecticut, Southern California Edison in Rosemont California and the Soccoro Electric Co-Op in Soccoro New Mexico.”
--

Hollingsworth says that the companies were instructed to report back in 90 days to outline the progress made in clearing these interference complaints. (FCC, RAIN)

**

SPECIAL COMMS: RADIO SOLO NOW ON THE GROUND

The United States military broadcasts to Afghanistan are still being widely heard on 8.700 Mhz, but are now land based. The broadcasts are being produced by the same unit that produced the Commando Solo airborne transmissions during the early stages of the war on terrorism. (Media Network)

**

NET INFO: BAJA NET MOVES

WB0YCQ reports that the Baja Maritime Mobile Net which meets 7 days a week at 8:00 am Pacific Daylight savings time has moved to 7.262 MHz plus or minus a few kilohertz. This is due to interference on the original net frequency. (WB0YCQ)

**

CONVENTIONS & HAMFESTS: SEVHFS IN LATE APRIL

The Sixth Annual Southeastern VHF Society Conference is slated for April 26th and 27th in Oak Ridge Tennessee. Program highlights include, antenna gain measurements, pre-amp gain and noise figure measurements, a Friday evening flea market with vendor displays, a Friday evening tour of nearby Ten Tec, and Saturday evening banquet with guest speaker Joe Dooley, P.E. of Oak Ridge National Laboratory. For more information contact Greg Robinson KB4NVD by e-mail to Rover@wireco.net (SEVHFS via VHF Reflector)

**

CONVENTIONS AND HAMFESTS: MT. BEACON HAMFEST POSTPONED

The Mt. Beacon New York Hamfest, scheduled for Sunday April 21st has been postponed. Planners say they are looking to reschedule. Stay tuned to Amateur Radio Newsline for an announcement of the new date. (KL7JCQ, WA2BSS)

THE SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

Ladies and gentlemen, with some words regarding Amateur Radio Newsline's current fiscal situation, here is Support Fund Administrator Andy Jarema, N6TCQ:

--
That's right. Its me. A.J.. And when you hear my voice you know I am here for one of two reasons. One is the bad – as in – help we need your financial support. The other is to say thanks to those of you who have kicked in to keep amateur Radio Newsline coming your way.

This week it's the bad. The numbers for the first three months of 2002 are in and its not good news. Right now we have about $145 in the bank and close to a thousand dollars in back bills sitting on my desk. And the people we owe money to like the phone company and our Internet providers want to be paid.

The bottom line is that this is once again a financial emergency. Only you can keep these weekly newscasts coming your way. We need your help, and we need it right now.

And remember. Amateur Radio Newsline Newsline is a federal 501c 3 corporation and a California certified non-profit corporation. This means that all contributions are tax-deductible.

The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066.

For the Amateur Radio Newsline Support Fund, I'm Andy Jarema, N6TCQ.

--

Again that's the Amateur Radio Newsline Support Fund, P.O. Box 660937, Arcadia California 91066. (ARNewsline™ Support Fund)

**

HAM RADIO IN SPACE: JERRY ROSS SETS SPACEWALK RECORD

United States Astronaut Jerry Ross, N-5-S-C-W has set a personal best . On Tuesday April 16th Ross made his 9th spacewalk on the latest of his seven

orbital flights. In doing this, the 54 year old retired Air Force Colonel set the record for the greatest number of flights and spacewalks ever by an Astronaut or Cosmonaut.

Prior to his current flight, N5SCW had logged 1133 hours in space.
Ross is flying for the seventh time and may not get an eighth turn. This is because of other astronauts in line for flights. (Published reports)

**

INTERNATIONAL-RUSSIA: SPACE TOURIST READY TO FLY

The world's second would-be space tourist is almost ready for takeoff. Jeramy Boot, G4NJH, has the details:

--
Russian space officials say that Internet industrialist Mark Shuttleworth has completed most of his training and is ready to visit the International Space Station.

Shuttleworth is a 28-year-old South African economist who made his fortune with an Internet business. He said he would conduct gene engineering studies while on the space station using animal stem cells. He said he hoped his research could be used to help find cures for Alzheimer's and Parkinson's disease.

Liftoff of has been set for April 25th from the Baikonur Cosmodrome in Kazakhstan. Shuttleworth confirmed that he is paying $20 million for the trip but in installments that will be complete only when the mission is over. That's the same sum American Dennis Tito, KG6FZX, paid Russian space agencies last year to fly to the international station, becoming the world's first space tourist.

For the Amateur Radio Newsline, I’m Jeramy Boot, G4NJH

--

Its not yet known if Shuttleworth will be licensed to operate the ham radio gear on board the I-S-S. (Space Adventures, published reports)

**

INTERNATIONAL - NEW ZEALAND: POWER COMMS STANDARDS TO BE SET

Powerline telecommunications and its potential as a source of interference will be a major topic to be discussed in New Zealand. This, from September 16th to the 30th. The gathering is slated for the city of Christchurch where a newly established committees, is working to create common standards for information technology equipment and radio and television products. According to NZART, this should prove beneficial to that nations radio amateurs. (NZART)

**

INTERNATIONAL – ZIMBABWE: BBC SUSPENDED FROM CAB

The Zimbabwe Broadcasting Corporation has been suspended from the Commonwealth Broadcasting Association for a year. This, as the print Media in Zimbabwe is becoming increasingly outspoken about the Zimbabwe Broadcasting Corporation and its political role in that nation. More information is on the web at http://www.rnw.nl/realradio/html/zimbabwe-latest.html. (Media Network)

**

DX

In D-X, The VK9ML DXpedition to Mellish Reef should be on the air as this newscast goes to air. The multi-national team will be on the air through the 22nd of April. (GB2RS)

Also, GB2RS reports that another major multi-operator DXpedition will be active as XW1HS from Laos. The operators, all resident in Thailand, include American, British, Swedish and Spanish operators, as well as 11 Thai nationals. (GB2RS)

**

THAT FINAL ITEM - HAM RADIO IN THE MOVIES: IMAX ISS MOVIE PREMIERES

And finally this week, ham radio is not only at a film premiere. It is actually an important part of the movie. This as the new 3-D motion picture about the International Space Station gets to the giant screen in a press preview on April 16th. Amateur Radio Newslines Bill Pasternak, WA6ITF, has more:

--
The movie we are talking about is the new IMAX film called Space Station. Amateur Radio on the International Space Station is a part of it. According to ARISS Program Manager Frank Bauer, KA3HDO, the film simply breathtaking:

--
KA3HDO: “It was the closest way that an individual could experience space without going to it themselves. It was spectacular from the persoective that you really felt like you were there. hat you were part of the team that was making Space Station happen.

It just was phenominal. Breathtaking views of the Earth, of Space Station and inside the cabin of the space station.”
--

Bauer says that it was pretty awesome to see Astronaut Bill Shepherd talk to the Texas students with using ham radio equipment. Also, ARISS appears in the movie’s credits.

According to Bauer, there were 21 members of the ARISS volunteer team attending and supporting the sneak preview. Visitors included Astronauts Bill Shepherd and Yuri Usachev. Also attending were the film’s producer Toni Meyers and National Air and Space Museum Curator Jack Dailey. The comments were all glowing and Bauer says that this is a must see movie.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

Consult local listings to find out when Space Station will be shown at an IMAX or OMNIMAX theater near you. (KA3HDO, ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm).

Before we go, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules, an application and information on contacting us is on our only official website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Mert Garlick, N6AWE, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

>licesnes, separate from their radio amateur licenses?

Prior to restructuring, yes - to the organization. It was even in the rules that the "responsible person" (i.e. trustee) need only be part of the sponsoring organization or government agency - he (or she) need NOT hold any amateur license whatsoever. Although it also said that only an amateur licenseholder may be the "control operator," there was NO requirement for a RACES station to HAVE a control operator (it's NOT in 31 CFR 97.109 - which defines station control of ONLY an amateur station, nor is it in 31 CFR 97.407 which defined RACES itself fully).

>In Hunt County, I know there is no RACES license that is called on the air.
>And, when a RACES net is in operation, it is at the direction of the County

>does not change the established relationship between RACES and its served
>agencies.

Except for the fact that it doesn't exist any more.... As I said, there is NO DIFFERENCE between "RACES" in its current form and any collection of licensed amateurs who have volunteered community service to a government agency - because there's NOTHING that distinguishes the two. When the FCC effectively repealed RACES station licenses (by attrition), they took away the difference.

>>
>
>You mean someone such as a governmental emergency management official that
>may not have an amateur license? That's an interesting point. *However* in
...

That is correct. Formerly, 31 CFR 97.5(d)(4) read:

"A RACES station license (FCC form 660) issued to a person by the FCC.

"A RACES station license is issued only to the person who is the license custodian designated by the official responsible for the governmental agency served by that civil defense organization. ... The custodian need not hold an amateur operator license."

[Military recreation stations also have no requirement that the station custodian hold an amateur license.]

>the FCC R&R, is it not already established that a person with a civil
>defense organization is allowed to enter a RACES net? I believe the new
>language accommodates such interaction between an agency and the RACES net.
>I may be wrong. I can only relate what happens around here with RACES, and
>here everyone on a RACES is a licensed amateur as well. I never even
>*heard* of "RACES licenses" until I heard they were taking them away...

There is no mention of "nets" in the rules; just communications. We have 31 CFR 97.407(d) that still reads:

"An amateur station registered with a civil defense organization may only communicate with:
"(1) A RACES station licensed to the civil defense organization with which the amateur station is registered; [*]
"(2) The following stations upon authorization of the responsible civil defense official for the organization with which the amateur station is registered;
"(i) A RACES station licensed to another civil defense organization; [*]
"(ii) An amateur station registered with the same or another civil defense organization;
"(iii) A United States Government station authorized by the responsible agency to communicate with RACES stations; and [*]
"(iv) A station in a service regulated by the FCC whenever such communication is authorized by the FCC."

[*] - marks sunsetted cases which disappear with the last RACES station expiration. Without the license, there is no such thing as a RACES station, just amateur stations which participate in civil defense.

Interestingly enough, those amateur stations which do sign up restrict themselves (they can no longer talk to just any amateur station - note that it didn't say "an amateur station while operating in RACES ..." but just "amateur station"). Also noted, "(iv)" above is redundant to 31 CFR 97.111(a)(2), since "RACES activation" would only be during an "emergency."

This means that for registered amateur stations, they can ONLY talk to others registered to the same organization (or another) UPON PERMISSION and upon the expiration of the RACES station license for that organization, NO OTHER STATION AT ALL unless they have permission from the responsible official, or decertify themselves from ALL civil defense organizations they are registered with.

[Note very carefully that what the rules actually say may be quite different from the logical intent of the rules when it comes to the restrictions....]

>I don't think there's going to be a drastic change in RACES served agencies
>just because the licensing is "going away."

That's because no one has really analyzed the changes - because except for non-renewal, all the rules are still present; i.e. there has been no change to the text of the regulation (31 CFR 97.407). They won't realize that non-renewal has these "snowball effects" until their licenses actually expire and they try to then figure out what it means. [If there are any other differences, I haven't compared them against the current CFR text.]

The "restructuring" changes were defective in other places too, like effectively doing away with the "Tech Plus" license yet allowing permanent operating privilege to those with element 1 CSCE's on the "HF novice bands", giving element 1 credit only for expired novice licenses, but not general or higher, etc....

I have plenty of time to be analytical, Kim. If "having your things
inside the box" means that I'd like to be able to believe your
statements as factual, put me down for that. I don't believe that when
someone says he has been on all HF bands that he means "most" anymore
than I believe than someone means "most" when he says he has visited
every state, worked all counties or taken all of his medicine.

Through rational discussion, Jim (N2EY) and I were able to agree on a change in my proposal.

Through condescending and patronizing comments, Jon was able to piss off someone who contributes to his salary.

I'm sure there's a lesson in there if you look for it.

With all kind wishes,

de Hans, K0HB

My very first response to Jim was reposted here last night. If that is not an answer, I don't know what is. Since 30M is a CW/digital mode band only, it should be obvious to any semi-intelligent baffoon that I had not be on 30M; and therefore had declared all HF bands in error. But, you're obviously far from the most intelligent baffoon.

I think what pisses you folks off more is that I wasn't caught by Jim's obvious attempt to snarl me...I have enough knowledge to realize right up front that 30M is set aside for digital/CW.

My comments were neither condescending nor patronizing. I simply
expressed disagreement with a proposal for which I see no need and which
appears to me to be based on an erroneous view of the present state of
the ARS. Getting pissed off about my disagreeing with you doesn't advance
your case any.

> I'm sure there's a lesson in there if you look for it.

What's that you were saying about being condescending and patronizing?

Yeah, and the lesson is that you act exactly like Larry claiming that Ed Hare is here on behalf of the ARRL with each and every post he makes--when Ed Hare is here separate from the ARRL when he is on this newsgroup. You seem to think that folks like Jon Bloom and Ed Hare should not be allowed to participate in ham-related matters just because they work for the ARRL.

Why is it OK for you guys, i.e., you, Larry, Dave Heil, Jim/N2EY, Dick Carroll, to name a few, to react the way you do when you get soooooooo pissed off when one of us, i.e., me, Cecil, Brian, Rick Adams, etc., yet you are all so immediate to jump on the indignant bandwagon when we disagree with you all? In fact, *you* carry it even further here by threatening someone's job, a *SHAMEFUL* human act!!!

The pity is that when *we* get ruffled, that's all there is to it. We all go to bed at night and wake up to new days. While you guys carry around some kind of axe to constantly grind, chest to thump about, with an ego that crowds out anything near logical.

Jon Bloom has every right to approach your ideas in any way he chooses, and I think you are quite typical in reacting to his reasoning as being

"patronizing and condescending" which it wasn't at all. He made some quite valid observations and you were wrong, yet he wasn't supposed to ask questions, was he? You know, it's kind of pitiful when you enjoy wearing the labels you unleash to others. There are support groups for such things.

Shame on you, Hans. I can tell you one thing: if the ARRL ever dared to chastise Jon Bloom, Ed Hare, or *any* paid HQ staff member for voicing their opinion, I would make it a personal campaign to advertise such on the air and not shut up about it. That's ridiculous if you think you have *ANY* support by "making your [fucking-my words] phone call."

If you want condescending, try having a conversation with Jim Haynie when he disagrees with you. Now, there's a master at condescension, humiliation, and embarrassment.

Take your tears, your whines, and your mommy's boy attitude somewhere else, because you are wrong on this one.

Jon: if you read this, I'd truly like to know the outcome of Hans' *supposed* powerful phone call he thinks he can make. I am serious, I would smite the ARRL hands-down if they ever told anyone they could not be themselves on this newsgroup. And, I think the ARRL is much more grown up than to get in Hans' sandbox with him.

Hans: YOU DON'T THREATEN PEOPLE WHEN THEY DISSENT, asshole Anti-American.

I don't think I've been this angry in a long, long time. Hans brings himself off as this proud, balanced, objective American. Yet, he threatens the job of another man for disagreeing with him. What a cheap, cheap shot. It scares me to think that Hans, or anyone else on this newsgroup, would actually call someone's employer to whine and cry about something that was said in conversation--here or elsewhere.

My God, what is this country coming to?

Actually I don't waste my time chasing paper. I really don't even waste my time on HF all that much. I can't stand the static noise and the clamoring for a callsign. But, yeah, if I were to do it I would do by getting on the air. I don't think dishonesty is a trait that I'd like to take up...

You really should stop while you're ahead...if it's pissing me off you wish to do. You see, as most on this newsgroup already know--I fell in love with myself years ago. For me to bother wasting my time over your behavior is way, way below me.

Well, the *real* bottom line is that any licensee can operate any station,
within their own (not the person who "owns" the equipment) operating
privileges, using just their call...Extra, General, Tech+, Tech, or Novice.

Correct?

it
> without him around, I operate it as my station and only stay in the Tech+
> portion of 10M. Quite legal...

The bottom line....an Extra can operate any station at any
authorized frequency/mode for Extra. If I go over a friend's
house who happens to be a Novice, I can even operate

that station as if it were mine at that time...I dont
HAVE to sign with the actual station owner's
call at all. Such holding to a physical station license
at a fixed location isn't of any concern anymore and is why
the FCC stopped issuing separate station licenses...and why
none of us have to sign as "portable" anymore. The FCC holds
the operator responsible...not the owner of the equipment (IMHO).

As a licensed ham, I can have multiple stations at different
locations....none of which might be the address on my
license. I believe there was a time when the FCC expected us to
"register/license" each such station if it was to be fixed for greater
than a certain time. That just isn't the case anymore.

Thousands of hams have two or more stations these days...
one at a traditional home base and the other at a vacation
or summer retireemnet home. Then there are all those
mobiles, HTs, etc.

Cheers,
Bill K2UNK

The country is in pretty good shape...it's a few individual egos who
can dish it out but can't take it. They are the "terrorists" against
freedom despite their calls for blood for those "against the
American Way of Freedom."

I can recall an incident where an amateur extra, pissed off because
he was not acknowledged as a "leader" in here, attempted to
dissuade an agency of the US government to "forget" or "ignore"
the comments of a citizen not licensed in amateur radio. That is in
the public database of comments on 98-143. According to that
creature, he is "proud" of his one-paragraph comment.

Maybe it's the water in some parts of the country... :-)

Not only that, that post is certainly *not* the only time Larry has said such to Ed Hare. An important distinction between Hans and Larry, though, is that Larry has never stated that he would "make a phone call," implying that he'd try overt influence to have another person lose their job. At least, I don't recall Larry ever doing that.

Me, too. That's what the reused subbands are for.
>
>And I want that place to be "visible" to other hams who might be interested >by innovation and progress, not cluttered up with signals from legacy modes.

This business of keeping the old modes off the experimental reservation seems to be the sticky wicket on the deal, Hans.

Are the subbands in question "cluttered up" by those signals now? If so, how many of those signals would remain once the new rules went into effect? Not many in either case, I think.

On 40 meters, the real problem (at least here on the East Coast) is not other hams but SWBC signals.

It should also be remembered that if the USA enacts your proposal, other countries' hams will still use those subbands just as they always have, so 80 and 15 will still be subject to those signals from other countries, as well as 40 in IARU Region 2.

Prohibiting "old modes" raises a whole bunch of problems from an administrative and enforcement point of view because the FCC will have to decide what's a "legacy" mode and what isn't. For example, how much do I have to modify PSK31 in order for it to qualify as a "new mode"? Or suppose I digitize a voice signal and feed it into one of those SCS boxes Cecil loves, and it spits out digital voice via PACTOR II - is that a new mode or an old one? FCC isn't going to want to get tangled up in that sort of mess.

It will also preclude direct comparisons of performance between old and new modes, such as 'PACTOR III' vs. PACTOR II, and coordination of experiments using modes like (gasp!) CW to set up the coordination.

There is also the question of ID and "public notice". If developers of new modes add an auto ID at the end of their transmissions telling where the decode metiods are available, "tuners by" will be able to look up the info and join in. Without such information, all that will be heard by those "not in the know" will be weird-sounding, undecipherable noises. The auto ID will have to be in an old mode, though.

I think the bandplan and current trends would keep practically all non-experimenters out of the experimental subbands.

From where I write it looks like the best compromise is to allow but discourage the use of non-experimental modes in the experimental subbands.

>If those segments remain empty then maybe we will have also sent a signal to >the regulators, but I'm betting that QEX subscribers would come flocking.

I'm pretty sure the regulators will be able to tell the new modes from the old ones in order to determine occupancy.

Most of all, though, I think the FCC will balk at complex regulations aimed at defining certain modes as "legacy" (ugh) and others as "new" and keeping them apart. And to get your subband idea going in the face of the inevitable ARRL BoD opposition, you need a wide consensus of support. Which you're not going to get if the old modes are pushed out of the subbands.

Larry, you're incapable of being a human being in any way. Do you think that what you say plays *any* impression upon me at all? It seems to me that you are condoning Hans' statement that he is "seriously consider making some phone calls," which is a serious threat to another person about their livelihood. Or maybe you missed the part where Hans confirms my suspicion that he is, indeed, threatening Jon Bloom's job (noted between asterisks below):

I said to Hans:
****
> Naw, I know that's not a threat coming from Hans.

Hans said:

I don't threaten, Kim. I promise.

I said:

> Hans would in no way try to snuff out dissention in that way, would he?

Hans said:

Through rational discussion, Jim (N2EY) and I were able to agree on a change in my proposal.

Through condescending and patronizing comments, Jon was able to piss off someone who contributes to his salary.

I'm sure there's a lesson in there if you look for it.

With all kind wishes,

de Hans, K0HB
****

Do you support Hans' statements, above, Larry? Speaking of direct question, get a direct answer--are you even going to bother answering that?

> >
> >The pity is that when *we* get ruffled, that's all there is to it. We
all

You hit the nail on the head there! Today's Commission will
NEVER put itself in the position of determining such
things. Of course it could subcontract such arbitration to
a disinterested third party who only has the "good of the
amateur radio service" at heart, such as W5YI (betcha
thought I was going to say the League ;-)).

> And to get your subband idea going in the face of the inevitable ARRL

The ARRL board, via the Newington crowd influence, has shown
it is interested in anything related to sustaining or
increasing revenues from magazine sales. As such it will
oppose anything that does not result in more subscriptions,
and/or more YaComWood radio sales.

I think that the novice band refarming issue has the
potential to be the real test of future policy for both the
ARS and the Commission. Is the FCC just blowing smoke when
it gives lip service to promoting innovation? Will the
Commission cave in to the ARRL's magazine salesmen? Will
the US ARS be willing to take the challenge to be
self-regulating within a frame a minimum of Commission rules
in these subbands, or will they founder on self-serving
interests (more refugees from CB running 2KW phone)?

Cecil, this was completely unnecessary. Anyone with half their brain tied behind their back knows that Larry has said what Kim claims that he said.

Did you know about the Happy Hooker and the Dolphin at Patrick Air Force
Base, Florida?

I been out fishin' on both of em.... O'course that was back in the late
70's.

Naah, I'm just as excited about it today as I was when I got my ticket
in 1994. There is SO MUCH to do in ham radio there is no way one could
get bored with it IMHO.

The Tennessee Teuton didn't answer, probably didn't know. Fred answered for him. :-)

About one in four USA citizens is a cellular telephone subscriber now. That's a LOT of low-L-band two-way digital radios (that connect directly into the telephone system). Cell telephony has become a Way of Life for more Americans than amateur radio and Working DX on HF with CW. :-)

I know my idea is not going to be a shoo-in, but on the other hand I am sort of counting on the FCC being observant enough to notice that the ARRL petition is essentially non-responsive to 98-143, where the FCC literally begs the Amateur Service to make some proposals "regarding implementation of new technologies" for those subbands. Perhaps FCC will be inclined to look outside the ARRL non-proposal and consider some unconventional ideas.

I am also of the mind that 98-143 signaled amateurs that ARRL BoD enjoys but a single vote in their deliberations, just like every other amateur and amateur organization.

It wasn't. It was not clear whether you were talking about yourself, someone
else,
your opinion, or something else.

Why not a simple, straight, direct answer in plain American English, Kim?

Something like:

'I've never operated 30 meters.'

>He didn't like that answer, so:

It wasn't a question of "didn't like". It was a question of 'wasn't clear what
you were trying to say'.

Yes, there is.

'I've never operated 30 meters'

is one possible answer.

You wrote that your all was different from my all, that you didn't remember,
and a bunch of other stuff, instead of just answering my simple direct question
with a simple direct answer.

What's wrong with simply telling the truth straight out?

My best guess is that you've never been on 30 meters at all. I also suspect
that your HF/MF amateur experience is extremely limited - probably never been

on most of the amateur bands below 25 MHz. And probably never had a complete QSO on any nonvoice mode. None of that is a bad thing. Being evasive about it IS a bad thing, I think.

2034. Goodbye to the Group

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-22 02:27:09 UTC
From: W5TIT - Kim <seventythree@eightyeight.net>
Message-ID: <3cc3758a_1@newsa.ev1.net>
Source record: 41354

A recent outburst here has evoked in me a rash of thoughts to consider all day. I download this newsgroup, for whatever reason, each evening and know full well there is nothing of any substance on it, certainly nothing that interests me.

I allow myself to be engaged by reprehensible thoughts from reprehensible people. I allow myself to get caught up in petty meandering about what was meant to be said; and know full well the main defense is simply against another for their challenge only through their dislike of something I said, and not necessarily that what I said was all that important; or wrong. I allow myself the anger that I have always been able to ignore or overcome, simply. I get extremely angry at injustices and choose to get wrapped up in how wrong someone is while I, myself, am just as wrong for the way in which I respond to them.

I will no longer participate in this newsgroup and am actually seriously considering dropping ham radio altogether. While this newsgroup is insignificant in terms of being representative of ham radio, I have no passion for a hobby in which people enjoy nothing but constant challenges with each other--and it seems to be that more than anything else lately. Perhaps the FCC is a governmental business, but the people have decided that the ARS is a proving ground for how much more important one is than the other; rather than the supposed "fraternity" to which many endear the hobby. If a fraternity means constant hazing, then leave me out.

This is my last post, my last time to logon to the newsgroup. So, any responses will truly not be seen by me. If you plan to make them for my benefit, then you may as well not bother. You brothers have probably been at it for years, and you'll probably be at it for many more.

This recent exchange, and the fact that tempers can flare so very much as to threaten each other personally really concerns me. I hope you will all fight your strongest fights, blare your loudest words, but leave out personal affronts and assaults toward personal lives...that is way, way too much folks. And, trade the semantics for real issues, huh? You all scare me when you act like that. Goodbye.

I'll chime in to disagree with you on this point. I've served two terms as a Vice Director, and I understand who the BoD is and how it works. Without reservation I can say that I believe that _EVERY_ member of ARRL BoD is absolutely committed to furthering the cause of Amateur Radio, and none of them has ever compromised that commitment to increase QST subscriptions, or to increase sales of any supplier of amateur equipment.

Period.

Nonetheless, I think that their current petition regarding "novice refarming" is far too conservative, and absolutely lacking in any imaginative thinking regarding modernization of the Amateur Service. Jon and others may disagree, but I still believe that the "soul of souls" of amateur radio still has a high proportion of tinkerers and experimenters, and that this valuable part of our Amateur Service must be spot-lighted and encouraged. "Refarming" may our last best hope of putting filament voltage on that spotlight. (How's that for mixing metaphors?!?)

>Who wants overtime?

Brian:

I'm one of the few drivers who doesn't. Most of the more senior drivers are real "overtime bandits," virtually doubling their income on OT. This job pays well enough that I can live without OT, though I do volunter a few hours every week to help out when needed. Last year I worked over 500 hrs. of OT due to not having enough seniority to get a "regular" run. Glad that's not a problem anymore.

>Like I don't have enough to do already, what with

>Without the license, there is no such thing as a RACES station.
There is only "amateur stations participating in RACES" at best.

That was the intent.

Remember that a RACES station license didn't require an amateur
licensed trustee and that trustee (or anyone else in the CD
organization) could operate [only] that station (unless he was also
licensed). There is a difference here.

When RACES was first formed in the 1950s, a non-amateur could
operate a RACES statsion. This went away a LONG time ago, and only
licensed amateur operators have been permitted to be the control
operator at a RACES station for several decades.

In the Portland metro area we have an active HEART (Hospital Emergency Amateur Radio Team) program integrated into the RACES/ARES peogram. Each hospital has in-place 2-meter voice and packet stations installed and paid for by the hospitals, provided with redundant back-up power (large industrial 12v battery charged from the hospital's emergemcy board powered by their standby diesels). Our club has a big program to get interested hospital personnel licensed as hams to be able to use the equipment if the assigned RACES/ARES operators are not on hand. I'm assigned to the local hospital with three others. I'm trying to get my assignment changed to the City Public Works Center which is two blocks from my home.....

I see that things haven't changed since I was in the LA Sheriff's Reserve forty years ago. They put me in Firestone Station (uniform patrol 3 nights a week in the ghetto) when I really wanted to use my engineering skills either in the crime lab or communications, but that's another story. I didn't think much of the "K6CPT" crowd, and when my class load at UCLA (grad school) got really heavy I left the

SO.

>ONLY an amateur station, nor is it in 31 CFR 97.407 which defined
>RACES itself fully).

Pay attention: Section 97.407(a) of the Rules says clearly:

§97.407 Radio amateur civil emergency service (RACES).

(a) No station may transmit in RACES unless it is an FCC-licensed primary, club, or military recreation station and it is certified by a civil defense organization as registered with that organization, or it is an FCC-licensed RACES station. No person may be the control operator of a RACES station, or may be the control operator of an amateur station transmitting in RACES unless that person holds a FCC-issued amateur operator license and is certified by a civil defense organization as enrolled in that organization.

Further, Section 97.3(a)(13) defined "Control Operator" as:

(13) Control operator. An amateur operator designated by the licensee of a station to be responsible for the transmissions from that station to assure compliance with the FCC Rules.

Notice that it doesn't exclude a RACES station by saying "a station in the Amateur Radio Service" and in that regard it would be interpreted to include all stations covered by Part 97, INCLUDING RACES stations, especially since Sect. 97.407(a) makes specific reference to a "control operator" at a RACES station.

Nope, neither do I... as far as the ARRL is concerned and I, it is called the 80 Meter band. Check their allocation chart. According to any SWL publication 75 Meters is referred to as a Shortwave Broadcast band. As well as that thin piece of metal sticking out of the fender of my truck is called and antenna, not an aerial.

But should not such experimentation include working on modes that can communicate in the teeth of those international broadcasters? I would wager that 75% of the 7.1-7.3 MHz segment could be used for even as simple a digital mode as PSK-31 in the FEC mode.

>Of course, if _you_ want to try something new and novel, I'm sure K1ZZ will
>give Chris Imlay an assignment to write an STA request. Us
>plain-brown-rrap'ers don't seem to have that sort of clout.

Neither you or I need an STA to do most of the experimentation that could take place, Hans. Under the present rules, hams can invent new modes and encoding at the drop of a hat, make the encoding for those modes public by documenting them (and ARRL asked -- even on a web page is fine) then use them to their heart's content.

>Now why are you _really_ tossing cold water on the idea? How odd that you consider my commenting on one single point as "cold water," with some ARRL conspiracy to boot.

Oh, have you joined the "hidden conspiracy" crowd? I am not tossing cold water on your idea, Hans; to the contrary, I like it. I "really" was trying to make the point to hams that they do not have to wait for such a rules change in order to experiment with new modes on HF.

Rest assured, I will try to avoid conversation with you in the future if this kind of reaction will be the result.

Sorry to have troubled you by talking with you about your idea.

I have had a couple of people try taping my club presentations, but I use transparencies, so the taping either had me in the dark or the transparencies so bright they couldn't be read. What it will take is someone who can get me in the right light as I move about the room a bit, and then separately tape the screen, then edit it all together.

This is all on Power Point, so I am hoping to find some time and perhaps use a program like Real Presenter to couple audio to the overheads. This could then be made available for download.

2066. Small Project Promotion of Ham Radio Begins!

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-22 12:40:25 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <uc803cl0np3jc8@corp.supernews.com>
Source record: 41379

Hello, all!

We had several hundred people show up here in Columbia
for the Astronomy Day shindig at a local High School and
many of them got a look at our display on satellite communi-
cation. The high school senior who set up next to us, and
was computer imaging through a telescope, turned out to
be a new ham, too! A friend of his, another senior, talked
to us at some length about radio and since he showed real
interest we spent quite a lot of time with him. So, all in all,
since we also heard some satellites on a home-made antenna
put together just for this event, we were pretty well pleased!

Four weeks from now we have scheduled another astro
event at the public library. This will likely debut my "antenna
bench" which will allow the interested public to push
Yagi elements around and observe the effect as they do
so. Also, the club here has most of the fixins for a true
satellite tracking system, which we might have in place for
a June date with the public! More on this later.

I've had my Technician's license three weeks exactly and
I have to say it's been fun!

Oh, I almost forgot to mention, we'll be using the Yagis of
the "antenna bench" to, among other things, let kids send
and receive the dreaded Morse Code!

Val Germann

According to Larsen E. Rapp, all it would take is back-to-back limiters to
perform amplitude discrimination. (Late 50's April QST)

It hasn't dawned yet on lots of posters and others that the FCC in the person of Bill Cross is playing to Carl and his cadre for the purpose of making sure that he (Bill) doesn't come under fire as a flaming Luddite for *not* pushing (nay, shoving) "the latest technologies" to be mandated in ham radio.
There will always (at least until they get ran off by all the CBers) be those hams who experiment with whatever technology interests them. And as usual, the big majority of hams will just be hams who want to get on the air and "ham" using their favorite mode. Most become attracted to new things over time and most adopt them over more time. That's the nature of ham radio. Change that and you change the basis for its existence.

When Carl and his cadre finally turn ham radio into a glorified trunked cell phone service I and a whole lot more hams will just abandon ship. I already have a cellphone. It's very useful but not very interesting.

Not at all, Larry, in fact it's pretty practical. Why have parallel ham radio emergency structures? That's why they don't issue RACES licenses any longer.

Yes, I did that.

But unfortunately he is prohibited by ARRL Bylaws from sending in comments on an ARRL petition. I guess it's up to you and me to push the idea with FCC. Last I looked, your comments haven't been posted at the FCC site.

Hopefully FCC isn't just taking a head count on this one..... of 35 responses to the ARRL petition, I tally:

21 in favor of ARRL's boundary shuffle
14 opposed

Of the 14 opposed:

10 say leave things like they are
3 say set up an experimenters reservation (thanks KT4ST and KE4MOB)
1 says decrease the phone bands and add more CW.

The beauty of my proposal is that it doesn't mandate that any ham need adopt
any technology at all. It simply sets up a few slivers of spectrum as a
"showcase" for those so inclined.

A reason that SSB and CW have lasted as long as they have is that
they do a pretty good job of getting through compared to say FM (ignoring
that FM is not allowed on most of HF). What we would want from
a new mode is to establish a QSO in conditions where the legacy modes
would fail. Digitize and compress your voice, transmit it via the new
mode, and the other ham receive and decode it to hear it on his
shack's speaker. After all, why go to all the trouble of developing
a new mode if it doesn't do the job better than the equivalent legacy
mode?

Why didn't that variant of SSB succeed? ACSB IIRC, idea was to
send your voice through a narrower bandwidth than regular SSB.

AS I understand it, when SSB came out it blew away AM for
DX work and such. No more heterodyne whistles on pileups, and
no more carrier to waste 2/3 of your 1KW linear power on.
The rare DX station could kludge his AM receiver to receive
SSB by making the IF strip go into oscillation, thus providing
a carrier for the envelope detector to work with. And hams
in the USA can still hear his AM transmitter with an SSB
receiver (or switch to AM mode).
Thus "Backwards compatibility" of sorts. A new mode
should be easy (via say a computer program, sound card, and an existing
transceiver) to rig up for the average ham so we have enough hams to
talk to.

Also a new mode should have lasting ability. Packet was fun 15 years
ago, but 1200 baud is really slow by today's standards and as such
"been there, done that" I haven't done packet for years.

To paraphrase the guy who climbed the mountain....

"Because we can."

It has to do with the spirit of tinkering and trying new stuff. Certainly not all of us will do it, but it would be nice to have a gathering place in the ether for such foolishness.

I don't.

>How can I propose
>a "Experimentation Reservation" and then tolerate the use of decades-old
>technology on that reservation?

Several reasons:

1) It simplifies the rules (no need to decide and specify what is allowed and what is not). That's a BIG deal to the FCC

2) It does not push away anyone who is currently there.

3) It will be supported by far more hams. (Political reality being what it is, an idea that gathers lots of support has a better chance than one that has almost no support).

4) It will allow coordination of on-air experiments by the use of old modes. This is very important - how do I figure out where the problem is if I am forced to use ONLY the new, experimental mode if the new mode doesn't work right away?

5) It sets a bad precedent by banning certain widely-used modes from some spectrum where they are currently legal today.
Not a good idea.

6) Old technology is not bad technology. It should not be banned unless there is a very good reason. No very good reason has been shown (IMO).

--

A simple question:

Do you think the presence of a few amateur signals using "decades old technology" will be a problem for those hams who want to try out new modes in the subbands?

I don't.

Anybody else?

I guess it depends on what you want to do. A digital SSTV mode would be
pretty nice to have, but it isn't going to replace SSB or CW.

I understand what you are saying, but I think you are limiting yourself
to a narrow idea of why a new mode is developed. Sometimes they can be
developed just for the fun of it.

Maybe the tide is turning! Since my earlier tally (above) there have been
23 new comments at the FCC web site.

Among those 23 --

10 are in favor of the ARRL proposal
13 are opposed

Of those 13 opposed:

8 say leave things like they are
3 say set up an experimenters reservation (thanks WA2ISE, W8QT, KC7RAD)
1 says leave CW alone, trim back SSB, and devote some room to AM.
1 I didn't understand.

According to that definition (and notwithstanding any other part of the CFR),
an amateur operator could be the control operator of a broadcast station,
looking at only part 97 by itself! That conclusion is obviously nonsense, so
it is clear that the term "control operator" refers ONLY to the amateur
service. That means that the definition doesn't define what constitutes a
control operator for any other service, including RACES, so just how did you

conclude that it does?

From 97.3(a)(37) which states that the RACES
service uses "amateur stations".

Sure - but only if it doesn't make life more complex for the FCC.

The key selling point of your idea is that it eliminates the paperwork
and inflexibility of the STA process. Having all sorts of restrictions
and regulations on what constitutes a new digital mode and what
doesn't complicates the issue and creates unwanted work for the FCC.

My read on 98-143 is that FCC wants simple regs that are easily
enforced and widely supported. The only part of your revised proposal
that is complex is the definition of what constitutes a new,
experimental mode and what doesn't. Eliminate that part and it becomes
a shoo-in.

> I am also of the mind that 98-143 signaled amateurs that ARRL BoD enjoys but
> a single vote in their deliberations, just like every other amateur and
> amateur organization.

I don't see that at all. NPRMs and their comments are not strictly
voting/majority issues. If they were, we'd still have at least two
code test speeds.

The way to sell this thing is on what it will let hams do, not what it
will prevent them from doing. And the rules gotta be simple and
straightforward, making life easier for the FCC.

--

Historic note:

Part of ARRL's restructuring proposal was to give full General
privileges to Novices and Tech Pluses. FCC said no.

Soon after restructuring, AH0A petitioned to give Novices and Tech Pluses the use of CW on the General class non-voice parts of 80, 40 and 15. FCC said no.

Think win-win.

Leave the word digital off the table! New modes need _necessarily_ be
digital, do they? (I'll admit to not having an example of something new AND
non-digital, but let's not rule it out.)

No. It may use amateur OPERATORS and amateur stations (which are required to have a control operator) may participate, but a RACES station can also communicate (within the restriction of the rules) with other non-amateur, non-RACES stations.

The scope of the definition of "control operator" is to the ARS (as previously demonstrated), and RACES covers a different scope (with some overlap, but it's still a DIFFERENT service).

I believe that the problem is that the FCC has changed the rules to the point where there are now inconsistencies in the surviving rules that cannot be reconciled.

And the current ARRL petition is an unimaginative "more of the same", with the attachment of several of pages of statistical tables. How can FCC do anything more that say "Strike Three"!

I count Chris Imlay as a friend of mine, but his persuasive talents are not evident in this yawner. In fairness, I suppose he has no choice but to work within the tasking document given him. A pity.

>experience in either domain...just fake it, Lennie....)

I have NO reason to "fake anything" in regards to either sex or HF radio transmission, having done both for the first time in the 1950s. Coincindentally, the quoted writer wasn't born until the mid-1950s.

That coincidence is simply one of chronology and implies no transfer of DNA. Some writers in here come by their bastardy quite naturally.

Some new things have already been worked out and air tested on
HF. I refer to the "digital AM" trials that have been underway in the
labs since 1996, on HF since 1999, all in the HF BC radio service.
Same bandwidth as HF AM which carries a fair amount of music.
The bandwidth can be reduced for just voice transmission. Details
of standards, air trials, even sound clips comparing conventional
AM with digital AM can be found at:

www.drm.org

The "drm" stands for Digital Radio Mondial, a consortium of
broadcasters and manufacturers.

I disagree, it was simply a question and it received no answer.

>For the very good reason that they enjoy it.
>Enjoying some things that aren't "modern" doesn't make you primitive.

Seventy years ago is not "primitive." At that time radio was 30 to 40 years old. On the other hand, manual telegraphy is over 150 years old as a mode of communications (158 for the first long working circuit of the Morse-Vail system begun in 1844).

"Working CW" with a modern, DSP-equipped, solid-state architecture transceiver having a built-in microprocessor, LCD displays, and perhaps an automatic antenna tuner seems an odd mixture of old and new.

In this part of the country one can also drive a modern motor vehicle on good concrete roads to a Renaissance Pleasure Faire and "enjoy middle ages life" for a day. (be sure to carry a cell phone along for emergency assistance communications)

There's no harm at all in enjoying whatever "primitive" pursuits turn another on. There seems to be a great deal of harm in MANDATING PRIMITIVE SKILL ACCOMPLISHMENTS to obtain a federal license that permits transmitting on amateur radio band frequencies using that modern solid-state transceiver with LCD displays and built-in microprocessor and DSP.

Let's all hear it for non-advancement of personal states of the radio art so that all can "enjoy the primitive" as Hans suggests...

Pretend for the moment that you don't work at 225 Main Street with all their bulletins and QST editors at your disposal.

Without the massive power to inform of ARRL, the typical tinkerer is a solitary fellow or gal, perhaps working with some small group of acquaintances at some unknown frequency(ies). I'd find it impossible to "hook up" with such experimenters in this segment you call "the ham bands".

On the other hand, if they were concentrated in some small known "showcase" segments, it would be an easy matter for ANYONE inclined to tinker to just dial them in.

Well, there is the internet newsgroup rec.radio.amateur.homebrew
or a similar group could be created. And people could set up
web pages to publish results and have software that would be
downloadable say for mod-demod via your PC and soundcard
if the new mode lends itself to such. If the new mode is really
good, word will spread....

>According to that definition (and notwithstanding any other part of
>the CFR), an amateur operator could be the control operator of a
>broadcast station,

Most certainly because for the last 15 years or so Part 73 of the
Rules (Governing Stations in the Broadcast Services) no longer
requires the operator "on duty and in control of" any broadcast
station (or doing maintenanace and adjustment of such stations) to
hold ANY type of FCC license. See Sect. 73.1350 of the Rules/

>looking at only part 97 by itself! That conclusion is obviously
>nonsense, so it is clear that the term "control operator" refers ONLY
>to the amateur service.

The definition applies to all stations regulated under Part 97.
RACES stations are included in that group.

>That means that the definition doesn't define
>what constitutes a control operator for any other service, including
>RACES, so just how did you conclude that it does? >

For regulatory purposes, RACES stations always have been considered
as another "flavor" of amateur station, not as a public safety or
governmental radio station, and subject to all amateur rules unless
expressly waived or modified by eules contained in the RACES
subsection of Part 97.

That's how regulatory enforcement is done in this field.

When I was Dakota Division Vice Director, K0CKB sent some very cogent comments to the FCC on various matters related to amateur radio, some of which were not necessarily congruent with ARRL 'official' views. Of course I was happy to give her my personal assistance in forming her thoughts. Do you know any citizens who might need similar help in expressing themselves?

>that FM is not allowed on most of HF).

Actually, narrowband FM was fairly popular on HF in the late '40s and early
'50s.
Its main drawback was that the modulation index allowed was so low that it was
no better than full carrier double sideband AM, and it required an FM-capable
receiver to be that good.

>What we would want from
>a new mode is to establish a QSO in conditions where the legacy modes
>would fail.

That's one reason. But there are lots of others:

- we could develop modes that hams don't use today, like simultaneous
digital voice, data/image.

- we could develop specialized modes that handle certain types of conditions
very well, at the expense of poor performance in other areas.

- we could develop modes that are easy to implement using minimal extra
equipment

- we could do it just for the heck of it. The real test of any equipment or
mode is how it
performs on the air. Something can look good in the lab but be a real pain to
use.
(Anybody remember the B&W 6100?)

> Digitize and compress your voice, transmit it via the new
>mode, and the other ham receive and decode it to hear it on his

>shack's speaker.

Yup.

> After all, why go to all the trouble of developing
>a new mode if it doesn't do the job better than the equivalent legacy
>mode?
>
The trick is to be able to develop it in the first place without lots of red
STA tape.

>Why didn't that variant of SSB succeed? ACSB IIRC, idea was to
>send your voice through a narrower bandwidth than regular SSB.

I think you are confusing ACSSB with NBVM (narrow band voice modulation).

NBVM was a way of processing speech so that it took up less bandwidth for
transmission, then reprocessing it at the other end. It took advantage of the
fact that most voices have a"gap" in the audio spectrum that can be removed
without impairing intelligibility too much.

As I recall (1977-79 era), it fit a voice signal into a little more than half
the usual spectrum. But you needed an expensive encoder/decoder and a rig with
narrower filters to get the advantages. Apparently not enough bang for the
bucks.

ACSSB was completely different.

>AS I understand it, when SSB came out it blew away AM for
>DX work and such. No more heterodyne whistles on pileups, and
>no more carrier to waste 2/3 of your 1KW linear power on.

Yup. It effectively doubled the width of the 'phone bands.

But it took a while for SSB to displace AM. Hams first used SSB in the early
'30s, but it really took off in ham radio in the late '40s. Yet even in the
early-1960s there were many AM signals on the ham bands and some manufacturers
still made AM gear.

>The rare DX station could kludge his AM receiver to receive
>SSB by making the IF strip go into oscillation, thus providing
>a carrier for the envelope detector to work with.

They had BFOs.

>And hams
>in the USA can still hear his AM transmitter with an SSB
>receiver (or switch to AM mode).
>Thus "Backwards compatibility" of sorts. A new mode
>should be easy (via say a computer program, sound card, and an existing
>transceiver) to rig up for the average ham so we have enough hams to
>talk to.

Most new modes will do the soundcard trick. What's really needed is a good
homebrewable HF amateur SDR (software defined radio).

>
>Also a new mode should have lasting ability. Packet was fun 15 years
>ago, but 1200 baud is really slow by today's standards and as such
>"been there, done that" I haven't done packet for years.

No new mode is going to have much lasting ability unless it has some really special properties. Remember when a 14.4K modem was the cat's meow? Wasn't that long ago.

By using the soundcard method, and eventually SDRs, new mode implementation won't require a new rig or a new "box".

All that Hans is proposing is to set up a place where such development can flourish.

Seems to me the real question is one Carl and I discussed some time back.
Should spectrum be allocated by popularity (in which case most of the HF bands
would be SSB) or should other considerations such as spectrum efficiency and
incentives have a role?

>Leave the word digital off the table!

OK! Amend the above to read:

Having all sorts of restrictions and regulations on what constitutes a new or experimental mode and what doesn't complicates the issue and creates unwanted work for the FCC

? New modes need _necessarily_ be
>digital, do they? (I'll admit to not having an example of something new AND
>non-digital, but let's not rule it out.)

Actually, most practical radio signals are "analog" in the sense that they are bunches of sine waves.
The digital part is in how modulation and coding are done.

>> My read on 98-143 is that FCC wants simple regs that are easily
>> enforced and widely supported. The only part of your revised proposal
>> that is complex is the definition of what constitutes a new,
>> experimental mode and what doesn't. Eliminate that part and it becomes
>> a shoo-in.
>
>OK, let me work on that, without hatching a new sub-band "open to everything
>except spark and AM voice".

Maybe we're missing the obvious.

The rules today prohibit US hams from using "analog voice modes" (full carrier DSB AM, DSB suppressed carrier, SSB, and all flavors of FM) from the subbands in question. Spark was prohibited in 1927 (although a Canadian ham actually got permission to put a special event spark rig on the air for the 100th anniversary of Marconi's transatlantic S).

Just leave those rules in place as they are today.

The really big change is 3), below.

All that needs to be done is:

1) Allow all hams who have passed a code test to use CW/Morse on all MF/HF amateur frequencies now allowed to Generals, using no more than 200 W.

2) Power limit of all rigs in the subbands to be 200 W if automatic power control is employed, 50 W without power control.

3) The limitations on data/symbol rate and occupied bandwidth of data modes used by hams on HF do not apply in those subbands, except that signals not in compliance with those rules must stay entirely inside the subbands. The encoding and modulation schemes must be publicly available, same as today. "Data modes" include digitized voice and image.

That's all. Simple and easy to implement. Nobody loses. The STA hassle is eliminated - just send the FCC an email and publish your latest PBI on a website.

--

While the proposed regulations would not require it, hams trying out new modes would be well-advised to include an auto ID in Morse or some other easily recognized and copied mode so that "tuners-by" could determine who they are hearing, and look up how to decode the weird-sounding noises. But this is in the realm of gentleman's agreement, not the rules.

The rationale was to cut the cost of producing QST by moving those items to the 'web', and in the case of Section News, greatly expanding the content above the few column inches available to each SM in the back of QST. I'd put it under the heading of 'saving membership dollars' or 'avoiding raising dues'.

It may not be the poster's intent, but it seems he is
defining his ideas about how the "experimental reservations"
or incubation bands should be used eg. "invent new modes and
encoding", "change data rates". I would hope there would be
more to be considered than this. Also there appears to be
more of the "new is digital" and "digital is new" philosophy
appearing here.

There should be indirect ways to sanction spark and AM voice
through regulating power vs. bandwidth. How about a bath
tub shaped power vs. bandwidth (freq) curve, asymtotic at 0
hz., a big sag down to approx. 0 power at 10 KHz, and back
up again at the SS extremities?

This is so friggin stupid. Title 47 in Polish notation. Gimme a Texas Instruments calculator.

So in the Amateur service, you need to take a code test even if you're not going to use code, but in the commercial service, you never needed to take the test. Then little Dick, Val Galileo, and chromosone challenged Bruce come on here demanding that we keep the code test because why???

I'm sending NCI another donation.

>HF radio transmission,...

Sure you do. You have presented NO evidence of being proficient or
current in either in THIS forum.

> having done both for the first time in the
>1950s.

And from your lack of awareness of CURRENT Amateur policy and practice, it
would appear that was the LAST time you probably did either.

>Coincindentally, the quoted writer wasn't born until the
>mid-1950s.

True...but I'll bet you the last time I had sex and the last time I was on
the air (with anything other than a CB or garage door opener) was a lot more
recent than the mid 50's!

>That coincidence is simply one of chronology and implies no
>transfer of DNA. Some writers in here come by their bastardy
>quite naturally.

Perhaps, but that is through no fault of thier own. Another question I
know you won't answer is WHAT is YOUR excuse?

ROTFLMAO at Lennie!

I flew a hop into Patrick in 1981 for a fishing charter after returning to America. I went commercial and didn't know about the MWR boats then. I've heard Langley has a nice little fleet.

OK, lets have a new analog mode. Dick was suggesting a "Banana Boat" mode
about a year ago. It's neither Morse nor Farnsworth. It was an incestuous
relationship of dits and dahs, and dueling banjos.

Anyway, I'm sure it can be run through an A/D converter and called
"innovative."

You fuss over everyting else... especially the stuff not worth fussing over.

K0CKB is Colleen K. Brakob, same current address as old Black Silver aka Hard Body hisself. The above seems a perfect example of nepotism effected to get around some guide/ruling/whatever to comment "personally." Rather transparent, I'd say.

In article <20020422222809.20725.00004944@mb-mw.aol.com>, the
Tennessee Teuton writes:

> Coming from the >>alleged<< radio professional who at first asserts that
>some radio services are created for "strictly recreational" purposes and then
>cannot answer WHICH radio services are so charted, this is funny!

I'm not an "alleged" radio professional. I *AM* a radio-electronics
professional. The US federal government (IRS, FCC, FBI, DCAS,
even the CIA!), the states of Illinois and California (franchise tax
boards), at least three Counties in California and one in Washington,
and several large corporations in the USA all agree that I am a
professional.

A two-bit twerp with a one-by-two amateur callsign keeps trying
for an "insult" mode by "challenging" the professionalism. He
hasn't come close to doing what I have done, yet he claims
"superiority" in everything because his poor little ego is bruised.
Poor baby.

Those recreational radio services were all mentioned in here. The
reasons for their creation are found mostly in the Reading Room of
the FCC office building. See all of Part 95, Title 47 CFR. Then see
which radio service within that Part was not stated for "recreational"
(there is one).

The following is an expansion of what was originally said, given for
the benefit of some in the southeast who do not have enough
neurons to connect thoughts given to them in plain English.

The FCC simply did not state outright that, for example, radio control
is to be used "only" by hobbyists. It simply stated that certain
frequencies with their maximum emissions are to be used for tele-
command (remote control by radio). That avoids ambiguities and
creates a haven for idiot barracks lawyers who wish to quibble over
the absolute sine qua non meaning of words. It should be immensely
obvious to even the near-braindead that the "R/C Channels" and all
regulations thereto are for HOBBYISTS. Hobbyists do their hobby
thing for recreation. That R/C part within Part 95 was created for
recreation, remains for recreation, and is not intended for anything
else but recreation.

Are there exceptions for the barracks lawyers (amateur variety) to
ply their idiot arguments? Yes, a couple of exceptions to "strict
recreation" are found in old issues of American Cinematographer
magazine. It should be obvious to all that larger "popular" newsstands

have at least three different monthly periodicals that cover the HOBBY aspect of radio control. There are more retail stores for the model-hobby industry than there are amateur radio specialty stores in the USA...think about that if there are any spare neurons left.

Amateur radio could be recast in print and the media as an enjoyable HOBBY with several side benefits. No, the perception is instead that any prospective amateur MUST enter into some sort of "service" of rank, title, status with clearly-defined boundaries of what MUST be done (jargon, terms, strict obediance to legacy modes, tradition) and the long-timers in this "service" MUST be given the respect they think they deserve even though they are yutzes to all those they think are "inferior." The rationalizations abound in all the descriptive patriotic bunting erected for this "service," unswerving "devotion to duty" and all the other bovine merde spread to keep the myth growing. We must salute and genuflect to these noble "leaders" who did not come close to making amateur radio what it is...but they seem hell-bent on keeping exactly to their liking.

Everyone must acknowledge that working DX on HF with CW is the Best That Hams Can Be...a "service" motto. :-)

That's what this is all about.. There's not currently anyone there. They
abandoned it 15 years ago, at least.

> 3) It will be supported by far more hams. (Political reality being what it
is,

The ARRL tried the "poll" route. Works for Bill Clinton, doesn't work for
them. They need to lead, not follow or take another poll. Or just get out
of the way.

> 4) It will allow coordination of on-air experiments by the use of old
modes.

Wasn't a trap at all... These are types of questions that are on the
test material. LOL

If you knew what mode is on 30 meters, you would have said so in the
first place, rather than going circles around the question almost 2
weeks.

Obviously your not made for newsgroups, if little things offend you.

Yes, I differentiate between 75M and 80M, I work SSB in the 75M
segment and CW in the 80M segment.

Do you consider paying repeater dues as paying to have your emissions retransmitted by another station?

Are you suggesting that K0CKB, a citizen of the US, should not comment personally on FCC matters regarding the Amateur Radio service, or that her comments constitute "nepotism" (government patronage towards relatives)? Shame on you!

With all kind wishes,
de Hans, K0HB

I've operated VHF on an HF antenna. I could probably operate HF on a VHF antenna. But that wasn't my question.

Can you name all of the bands? Do you know all of the emissions allowed for each one?

> >Do you differentiate between 75M and 80M? Or is it all 80M?

Hustler (antenna coils) are the only ones I've seen that actually make the distinction. If the FCC in Part 97 doesn't make the distinction, why would you?

Brian

Dear Old Sir,

You protested mightily with all kinds of self-righteous rhetoric when your organ-monkey challenged your comments to FCC, but you would disparage another interested citizen exercising her right to make comments to the same government agency?

My, my, my! Rather transparent, I'd say!

With all kind wishes,

de Hans, K0HB

Hans, I've been mulling your proposal for experimental reservations and I just can't get past the "reservation" part. I guess it's the Cherokee blood in me. To restrict all operation to strictly new modes is in the first place impractical, given as someone said, the need to coordinate among testing stations using reliable proven modes, and the requirement to ID in a commonly understood mode. The thrust of your plan is noble, but the details are devilish to the point of negating the whole thing.
Then I can't get past the fact that you're the guy who wanted FCC to do no more than tell us "Here are your bands. Have a nice day." Quite a change, that. Why the huge shift of position?
I think Jim N2EY refined it enough in his last post that most anyone should be able to support it. I hope you do.

I'm not sure how either of those would assist me more than they assist anyone else. You all see the same bulletins and the same QST articles I do.

> Without the massive power to inform of ARRL, the typical tinkerer is a
> solitary fellow or gal, perhaps working with some small group of

> "hook up" with such experimenters in this segment you call "the ham
> bands".

I had no trouble hooking up with fellow packet tinkerers when packet was in its infancy, well before I was employed at ARRL HQ. (And before the Internet was widespread.) The history of ham radio is well stocked with examples of people doing experimental work, including in cooperative groups, without needing dedicated subband allocations with which to do it.

> On the other hand, if they were concentrated in some small known
> "showcase" segments, it would be an easy matter for ANYONE inclined to
> tinker to just dial them in.

But if the experimenters therein were doing something really new, just dialing them in wouldn't be too useful because their transmissions would likely be uncopyable. The listener would need to communicate with them using old-fashioned means in order to learn enough about what they are tinkering with to join them. I still don't see how dedicated subbands make that any easier. The initial intercommunication and sharing of ideas, and the spreading of the word, occurs on existing media and modes, not principally on the mode under development.

In fact, as Jim points out, under your proposal not only would I have to switch to another mode to talk to my fellow tinkerers about why the latest tweak isn't working correctly, I'd have to switch to another frequency so as not to use a disallowed old-fashioned mode in the experimental reservation.

It seems to me that the root of this proposal is that experimentation being desirable, dedicating spectrum to it must be a good thing. But I don't think the working model has been fully thought out. Or it hasn't been well explained.

I'm all for encouraging experimentation. (I'll gladly stand on my record on that score.) Please don't misinterpret our disagreement as to method as

being disagreement about the goal. I don't envision much benefit coming from your proposal, although I don't think it would do any great harm, either. I do object, though, to promoting it on the basis that experimentation is not possible under the present system.

Nope, I consider my repeater dues as part of a membership, much like
the lifetime membership into ARRL. If a non-member wants to transmit
on the club's open repeater, they are within their rights to do so, so
long as they have the license privileges granted to them to do so.

A 6-dB difference doesn't seem like much of a threshold. From the point
of view of the experimenter, would APC even be worth bothering with for 6
dB of S/N? And from the point of view of other occupants of the spectrum,
6 dB of protection isn't much.

The idea of Darwinian competition between modes has been proposed before,
and I've always thought it was a bit too draconian a solution for a whole
band. But there is something intriguing about the concept when applied to
a limited subband! I suppose Hans will view this as an unacceptable
watering down of his original proposal, and Carl would rather have the
whole band to work with but, hey, nobody gets everything they want!

PSK-31 was such a new scheme and it is not limited by 97.305(b). I believe that 97.305(b) is intended to cover brief signals sent for test purposes, not unspecified digital codes that are permitted, subject to a few conditions, under other rules.

Basically, the rules for unspecified digital codes require that the modulation mode be legal on the frequency involved, the encoding method be public and the symbol rate be under the maximum symbol rates permitted by the rules.

>I wouldn't either, but I sure would be a lot more inclined to do the
>design if I knew there was a small segment of the spectrum
>where I and other tinkerers could meet for extended test, debug,
>and prove-in of our ideas.

There are such segments of spectrum, Hans; they are called the Amateur bands. Hams can do most of what you are proposing right now, and there is no deep secret reason for my saying so other than I don't want anyone to be confused and think that they cannot.

One of the reasons for the "public" requirement in the rules permitting unspecified digital codes is that the FCC wants to ensure that the content of amateur communications continues to be public. I don't want to see that change, because it would then be impossible to differentiate between legitimate amateur communication and commercial intrusion.

One of the ARRL staff asked the FCC if publishing the necessary information on a web site was sufficient, and the FCC said yes. So for most of what you propose, STAs are not necessary and such experimentation can take place right now.

I personally think that the limits of modulation mode and symbol rate limitations are somewhat limiting on the Amateur Radio Service, however. The first is completely unnecessary and the latter exists mainly to prevent one signal from occupying a significant part of the band.

If I had my druthers, the old Novice segments would be declared open territory, with any mode allowed at any time, with the sole requirement that the modulation method and encoding scheme be public and that the bandwidth of the signal be limited to the width of the segment.

For the rest of the digital sub-band, if the modulation mode and encoding method is made public, hams should be have carte blanche to experiment, with a bandwidth limitation making more sense than a symbol-rate limitation.

We have 90% of this right now, IMHO. It is really unfortunate that more hams are not inventing new modes under the unspecified digital code provisions of the current rules.

If the PBI uses a modulation mode legal on the band in question, the encoding method is public and the symbol rate is acceptable for the band involved, an STA is not, IMHO, required.

What are you looking to do?

All right, how about this - shamelessly derived from Hans' comments. Not sent to the FCC yet, however.

--

Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of)
)
Amendment of Part 97 of the Commission's)
RM-10413 Amateur Service Rules Governing)
Operating Privileges)
)

PERSONAL COMMENTS OF JAMES MICCOLIS, N2EY

OVERVIEW

These comments are in response to the ARRL proposal for "refarming" the existing HF "Novice sub-bands" on the 80, 40 and 15 meter bands.

I. Discussion:

The ARRL petition does not address the implementation of new technologies by radio amateurs as repeatedly requested by the Commission in WT Docket 98-143. It simply proposes the elimination of the Novice subbands and their reallocation to existing modes, primarily analog voice and image. The ARRL polling method did not address any spectrum allocation alternatives other than possible changes to the existing subband structure.

I propose that the Commission take this opportunity to provide the Amateur Radio
Service with a new incentive to concentrate on paragraph 97.1(b) of the Commission's Rules.

97.1(b) Continuation and extension of the amateur's proven ability to contribute
to the advancement of the radio art.

Advances in technology, changes in the license structure and test requirements have eliminated the need for special subbands for Novice and Technician Plus licensees. The "Novice subbands" have outlived their regulatory purpose, so I propose they be converted to a new purpose which will ensure the future Amateur Radio service continues our "proven ability to contribute to the advancement".

II Proposal:

A. To "de-populate" the current Novice segments, I propose that all Novice (and Technician with code credit) licensees be authorized to use Morse code in all of the MF/HF spectrum now authorized for General class licensees, using the
current power output level restriction of 200 watts.

B. I propose that the current Novice sub-bands be reallocated for non-traditional and experimental modes such as digitized voice, digitized image, high speed
data, and other "forward looking" communications methods. Modes currently allowed in these segments would continue to be allowed.

C. I propose that the current power output level restriction of 200 watts be retained for those subbands, and additionally propose that transmitters in those segments must be equipped with auto-adaptive circuitry to reduce output
to the lowest level consistent with reliable communications if power output in excess of 50 watts is used.

D. I propose that Commission grant broad discretion to amateurs in the technical
aspects of mode use in these subbands as to modulation and coding schemes, non-traditional technologies, and data/symbol rates. Specifically, the current
limitations on occupied bandwidth and data/symbol rates would not apply to amateurs using experimental modes in these subbands.

Respectfully submitted,

James Miccolis, N2EY
136 Morningside Circle
Wayne, PA 19087

If the band is open to SSB, SSB will move in pretty quickly. The real question is whether digital signals can coexist with them and vice versa.

Some slow-data rate spread spectrum could probably get along by using the entire sub-band.

Oh geeze...Now he's James Bond.

Do THEY have an allocation for "strictly recreational" communicaitons too,
Lennie?

>A two-bit twerp with a one-by-two amateur callsign keeps trying
>for an "insult" mode by "challenging" the professionalism.

No, Lennie....YOU keep making stupid mistakes that even relatively new
radio hobbyists know are dumb.

>He
>hasn't come close to doing what I have done, yet he claims
>"superiority" in everything because his poor little ego is bruised.

I have NEVER claimed "superiority", Lennie. Not in electronics. And I
have stated before that you do know more about what's in the box. The problem
has been and continues to be your insistence that you know anything about
Amateur Radio beyond electronics theory.

>Poor baby.

Yes, Lennie, you are. Read what you write...Read HOW you write about it.
Some "professional".

>That avoids ambiguities and
>creates a haven for idiot barracks lawyers who wish to quibble over
>the absolute sine qua non meaning of words.

Lennie, YOU are the one who argues over "absolute meaning" of words in
here...Have for years. THEN you make GLARING mistakes about the purpose of
various radio services, insisting that they are "STRICTLY" for recreational
purposes.

They are not. NONE of them are for "strictly" recreational purposes.

You alledge to be a professional, Lennie. Then BE professional. Get your
definitions right. DON'T try to skate away from YOUR foolish mistakes telling
us how the FCC alledgedly wrote laws in such a way as to make it APPEAR as

though a service was for "other" purposes although they "meant" for it to be "strictly" recreational. If that IS what they meant, they would have said it.

>It should be immensely
>obvious to even the near-braindead that the "R/C Channels" and all
>regulations thereto are for HOBBYISTS. Hobbyists do their hobby
>thing for recreation. That R/C part within Part 95 was created for
>recreation, remains for recreation, and is not intended for anything
>else but recreation.

Yes, Lennie...I said a few days ago that that IS the purpose for which thye are intended. YOU, however, keep trying to insist that that is the ONLY application for which they may be used. You are wrong.

>Are there exceptions for the barracks lawyers (amateur variety) to
>ply their idiot arguments? Yes, a couple of exceptions to "strict
>recreation" are found in old issues of American Cinematographer
>magazine....(SNIP)

Lennie...Simply say "I was wrong. There is NO radio service that is "strictly" recreational". If you want to tap dance, take Mrs. Lennie out tonight...you look silly doing it here.

> No, the perception is instead that
>any prospective amateur MUST enter into some sort of "service" ...(SNIP)

Your relapse into another "But I don't wanna play nice..." rant duly noted. We've heard it before, Lennie.

>Everyone must acknowledge that working DX on HF with CW is
>the Best That Hams Can Be...a "service" motto.

Only if they want to Lennie. The rest of us (those of us LICENSED, anyway) can make it what we want it. Just like we do already and have for almost 100 yers.

Now go back to bed, it's nap time, Your Geezerness.

Steve

(PBI)!

> I do object, though, to promoting it on the basis that
> experimentation is not possible under the present system.

Never said that experimentation isn't possible! Just said that this would
give it a more visible environment in which to flourish.

change,
> that. Why the huge shift of position?

Actually, it's that thinking ("Here are your bands. Have a nice day.") which
got this idea going in my mind. Think of this as a few little "mini bands"
where we didn't have to worry about the conservative old emission rules and
could just "have a nice day" with whatever wild new idea crossed our minds.

Okay, but I have little advantage there, either. If there's real experimental work being done, I have little doubt that the QST and QEX editors will find space to cover it. And I do think that to spread the word effectively you need to do so using media (print, Internet etc) other than via the experimental mode.

I think that she is better suited to be a "Repeater Police" and make
sure that the content of all discussions meets her criteria for proper
content. Who knows, someone could have been talking about the weather
or God forbid the traffic and she could have missed her chance to
correct the error of their ways.

Oh yeah, that's right, she said that she was monitoring simplex
frequencies too. She would be a hard one to get away from. It does
remind me of why most of the talking that I do on 2M is on sideband
unless it's an emergency.

I do miss her though. In a ng, where she can't really dictate what
people say by beating them over the head with misinterpreted FCC
rules, she was quite funny.

Actually the FCC *does* make the distinction. In 97.301(b), 97.301(c),
97.301(d), 97.301(e) and 97.305(c) the two bands (75M and 80M) are each
treated as a band separate from the other.

Which is why both Hans' and my proposals disallow analog voice modes.
Specifically, my proposal is that all modes now allowed in those
subbands would still be allowed, plus any new or experimental modes.
The common analog voice modes are neither new nor experimental.

It could probably be sorted out by the use of the standard mode
designators.

> The real question
> is whether digital signals can coexist with them and vice versa.

Interesting point. Maybe it should be a true free-for-all. One wonders
how many SSB users would move into a subband with a 50 watt power
limit and a bunch of weird sounding signals.

> Some slow-data rate spread spectrum could probably get along by using the
> entire sub-band.

Would there be any advantage considering how little spreading would
actually take place?

I've submitted the following amendment of my original proposal to the FCC.

After discussion of my proposal with other amateurs, I've
been persuaded to make two changes. Please substitute the
following new paragraphs B. and C. to my original comments
here.

B. I propose that the current Novice sub-bands be set aside
as a new "Experimental Reservation" for non-traditional
and experimental modes such as digitized voice, digitized
image, and other "forward looking" communications methods.
Traditional modulation methods would be allowed in these
segments only for brief coordination discussion during
the testing of an experimental mode.

C. I propose that the normal power output level of 1500W
be allowed for those segments, but transmitters which are
adjusted and capable of more than 50W must include auto-
adaptive circuitry to reduce power to the minimum level
needed to maintain reliable communications.

Hans, is the FCC going to raid ham stations looking for auto-adaptive circuitry or is compliance going to be completely voluntary? What do you do about homebrew auto-adaptive circuits that don't work right? How do you propose to enforce such a regulation? Any regulation that increases the FCC's workload is probably not going to be adopted.

Does the FCC currently come raiding to look for compliance with the current auto-adaptive rule in 97.311(d)? I'll presume that hams will voluntarily follow this rule, just as they have mostly been doing for Amateur Radio regulations since 1912.

> What do you do about homebrew auto-adaptive
> circuits that don't work right?

What would you do about it? If it were mine, I suppose I'd fix it, just like any other malfunction of my equipment.

> How do you propose to enforce such a regulation?

The same way 97.311(d) is enforced.

With all kind wishes,

It doesn't seem to be any more transparent than the righteous fury exhibited by yourself requiring TWO responses to the same message.

The "other interested citizen" is your WIFE, isn't she? If you are still on good terms, etc., in your marriage, then it would seem quite normal that you two share the same thoughts on many things, come to agreement on many things. That's hardly comparable to another "citizen" who is not a family member.

NB: I am still objecting to your proposal in re the "ring." Don't get your hopes up...

>comments constitute "nepotism" (government patronage towards relatives)?

No on several counts. I merely pointed out something, mainly that Colleen K. Brakob is a close personal family member. You had referred to your wife in a modified "third-person" form, that of only giving her call letters.

"Nepotism" is not restricted to government according to two different dictionaries. It is generally just "favoritism toward relatives."

In other words, you submitted comments to the FCC through your wife in an effort to avoid any possible disputes with the ARRL while an ARRL official. That was the "transparent" part.

Is there anything else you want cleared up? Or are you going to "suppose" other hidden double meanings in everything to avoid answering challenges directly?

>There was also the FCC First Class Radiotelegraph license test which did
>require Morse code.

There still is a "First Telegraph" but it is called a "certificate," not an operator's license. A "T1" (new familiar term) is only useful for being the chief radio operator on a US passenger ship. Morsemanship requires both 20 and 25 WPM tests (25 may be copied on typewriter, automatic keyer on send, all speeds slower than 25 WPM must be manual).

The FCC website has all the information. According to them, an amateur extra license is credit toward passing all telegraphy test elements. [they may not have corrected the rules or web page for that?]

What were "operator licenses" before are now either "certificates" or "permits" with the exception of General Radiotelephone Operator, GMDSS Operator or GMDSS Maintainer licenses.

The question pools are fully open for all commercial operator licenses, including answers. There are 10 firms in the USA who are listed as COLE (Commercial Operator License Examination) Managers. Much higher fees for exams than for amateurs although the number of questions in the exams are roughly comparable.

>that 97.305(b) is intended to cover brief signals sent for test purposes, not
>unspecified digital codes that are permitted, subject to a few conditions,
>under other rules.

PSK31 was developed and tested in Europe, specifically the UK, by
its innovator, Peter Martinez, G3PLX.

Implying that it was "under FCC rules" is not good phrasing. PSK31
wasn't "limited" by anything other than UK amateur radio regulations
in its beginning.

>I personally think that the limits of modulation mode and symbol rate
>limitations are somewhat limiting on the Amateur Radio Service, however. The
>first is completely unnecessary and the latter exists mainly to prevent one
>signal from occupying a significant part of the band.

I don't understand why any amateur organization hasn't asked for
more spectrum space in the MF-HF region...or even below MF.
The UK got a "lowfer" band, below the US' 160-190 KHz open
territory for unlicensed emitters.

It's been over 6 years since the last NTIA HF spectrum survey
(with the ARRL given some footnote space) with the clear words
and numbers of "amateurs requesting more spectrum space."

Haven't seen word one on such requests. The number of HF users
are down from twenty years ago. There's "open room" there to
satisfy requests of up to 2 MHz more bandspace.

Instead of squabbling over sub-dividing the already sub-divided
narrow bands on HF, why not just propose a whole new band
for nothing but experimentation IN ADDITION to the narrow bands

already in place?

>We have 90% of this right now, IMHO. It is really unfortunate that more hams
>are not inventing new modes under the unspecified digital code provisions of
>the current rules.

I get the feeling that everyone must pay homage (and time-tithe)
to the grande old legacy mode of OOK CW...so much so that it
has become a negative incentive to experimentation.

I think that in the small sub-bands we're talking about, it may well be
that,
with elimination of unnecessary data rate/bandwidth restrictions, some
mode may use the entire sub-band ... having a few amateur signals using
"legacy" modes in the sub-band could serve as a handy source of
interference to prove robustness ... perhaps they should be allowed, but
not afforded ANY claim to protection from interference from experimental
modes? (just a thought, looking for a way forward ...)

Hans,

If you'd be willing to share your PBI with me via e-mail, I'd be
curious as to what you're up to ... maybe even interested in
collaborating or providing a distant station to test with ...

Will need to define "maintain reliable communications" ... could
be in terms of Eb/No, BER, etc.

Dick,

Why do you insist on taking opportunities for unwarranted, gratuitous
shots at Bill Cross?

Frankly, I haven't had a chance or a reason to talk to Bill in a while
now. And I certainly haven't spoken to him on this subject ... NOR
have I been "played to" by him ...

As Hans pointed out, the FCC was pretty direct in its message
to start using newer technologies ... in the R&O ... and I haven't
had anyone from the FCC contact me about "When are you guys
going to get on with it?" since the R&O came out.

The ball is in OUR court now. What's expected has been laid out
for us ... if we don't meet the challenge, I fear that there will be a
price to pay.

> When Carl and his cadre finally turn ham radio into a glorified
> trunked cell phone service

First, you clearly don't understand ANY of what I've suggested in the
past ... (but that doesn't surprise me at all).

> I and a whole lot more hams will just abandon ship. I already have a
> cellphone. It's very useful but not very interesting.

Secondly, it's abundantly clear that you are TOTALLY lacking in any
vision for the future that extends beyond what you're comfortable with
from the past ...

Why don't you just get out of the way and let the rest of the world
move forward?

Give us a couple of weeks. Because this is an "employee" radio club we've
had to hold up the STA request while the lawyers bless us on patent grounds.
(We don't expect a patent problem, but our Chief Scientist is a member of
the team, and he needs to cover his butt.)

I've become persuaded that FCC will be more likely bless proposals which "deviate the least" from the norms of the surrounding band space. I think the 50W limit on uncontrolled xmtrs will make the issue moot.

> Will need to define "maintain reliable communications" ... could
> be in terms of Eb/No, BER, etc.

97.311(d) might be a good model to work from, but I avoided cranking it into the proposal to avoid getting bogged down in detail.

At least until after WRC-03 ... then we can drop the code test part :-)

> 2) Power limit of all rigs in the subbands to be 200 W if automatic power
> control is employed, 50 W without power control.

The numbers may be considered arbitrary without some justification. Don't
get me wrong ... I *like* the idea of automatically inforcing the minimum
power
rule ... however, consider that the max limit for SS in 70 cm and up is
100W,
but for over 1W you must use APC ... that's a big difference from 50 W.

> 3) The limitations on data/symbol rate and occupied bandwidth of data
modes

To what extent? (Need to specify how many dB down at sub-band
edges, or something similar ...)

There are other ways of IDing as well ... I would not limit it to Morse.
(In general, I would venture that any "tuner-by" sufficiently technically
inclined to want to get involved could recognize and decode other
methods of IDing ... such as PSK31 or whatever ...

Thanks Hans, I needed that. I was just resting on my laurels like the other 40+ year licensed hams ocassionally do.

So if CW is good in the 80M band and CW is good in the 75M band, why the distinction?

And why don't we have the 10M band and the 9.5M band? There's a whole lot more spectrum up there and it would appear to make at least as much sense as the 80/75M division. Plus the FM portion could be a third "band." My old SB-101 even divided it into 4 bands.

Yep. Its much faster and requires a less extensive database to geocode to a
zip than a street address. Don't have to worry about topology either. And
as much time as I spend in line at the PO, it might as well be my actual
address. Them and Wal-Mart.

Its so digital that a computer won't handle it. Sounds like it needs an A/D converter.

Unfortunately, to my knowledge, they don't have to. I don't know of any SS
work being done at power levels greater than 1 watt.

The net effect of the auto-adaptive rule for SS is that hams don't design the
systems to use it. It is a limiting factor in the use and growth of SS, IMHO.

> actually take place?

If the data rates were REALLY low, you could still get some reasonable
processing gain. If you used a 12.5 kHz spreading sequence, the bw
(clock null to clock null) would be 25 kHz ... if you only wanted 1 bps
data rate, the process gain would be about 44 dB ... with implementation
losses of 2 dB and a S/N requirement of, say 14 dB for a decent BER, you
could get a theoretical jamming margin of 28 dB ... in other words, the
system
could tolerate an on-channel jammer as much as 28 dB stronger than the
desired
signal.

On the other hand, if you wanted 10 bps data rate, the processing gain would
be
10 dB lower and you'd "only" have 18 dB of jamming margin.

Assuming ASCII at 10 bits/character, just for the sake of argument, that
would be
60 characters minute, or about 12 wpm ...

How many people can copy a CW signal at 12 wpm with another signal 18 dB
stronger right on top of it??? (And with that much process gain, you could
have
more than one signal operating in the same spectrum using CDMA separation,
as long as the spreading sequences were good in terms of correlation
properties.)

An Eb/(No+Io) of 23 dB will let you use some pretty interesting
waveforms (in terms of heavy symbol overloading).

I rather like the idea of "here are your subbands, have a
nice day", with some indirect sanctions on QRO SSB and AM,
by way of severe limits on power in the 2 to 10 KHz range.
Fencing out SSB as a mode by definition is not the
libertarian thing to do and could be regarded as elitist
(how about some help here Cecil?).

I would think that SS would be allowed to hop 80-40-15M. I
hope the idea is not to fashion the mode to fit the
YaComWood SSB gear just to accommodate or sell more of them.

Brian:

What "profile" would that be? Oh, just because I'm not eagerly accepting of the dumbing-down process which is ruining amateur radio, and I'm not warmly, "inclusively," and politically-correctly welcoming all the newly-minted new dumbed-down hams into the ARS, you whine about my "profile." Fine. Have at it. Be a wimp. It suits you, I'm sure.

More correctly - the microphone switch turns on and off and is
indeed digital.

"Carl R. Stevenson" wrote:

> Why do you insist on taking opportunities for unwarranted, gratuitous
> shots at Bill Cross?

There's nothing gratuitous about it. It's pure realism. Cross calls the shots at FCC for the ARS. Why wouldn't you lobby him for what you want? Why would he want to expose himself to your criticism as a "backward Luddite"?

>
> Frankly, I haven't had a chance or a reason to talk to Bill in a while
> now. And I certainly haven't spoken to him on this subject ... NOR
> have I been "played to" by him ...

Of course not, the R&O has been finalized for over two years now. The damage was done long ago.

>
> As Hans pointed out, the FCC was pretty direct in its message
> to start using newer technologies

Since Cross *IS* the the FCC as far as the ARS is concerned, and you made your point up close and personal long ago, so what? You've pretty well demonstrated what he'd face under any other result.

> ... in the R&O ... and I haven't
> had anyone from the FCC contact me about "When are you guys
> going to get on with it?" since the R&O came out.

SO? His point was made, and most likely you pretty well authored it. He's intelligent enough to know what kind of a person he's dealing with. Consider how you've treated me based on my support of CW. He knows what he'd face if he chose any other route. You think he'd want you shouting at his superiors about what a Luddite he is should he even hint at keeping a code qualification? Or NOT insisting on all hams jumping onto the technology bandwagon?

Are you dense enough to believe that technology doesn't have serious positive impact on the socalled Legacy modes as well? It really might help if you spent some time on the air actually using some of them other than SSB. Technology isn't lost on all but the users of the latest modes. Wise up.

>
> The ball is in OUR court now. What's expected has been laid out
> for us ... if we don't meet the challenge, I fear that there will be a
> price to pay.

Yeah, you laid your plans pretty well, that's clear enough. The "price" will be paid, regardless. When commercial activity wants and needs amateur spectrum,

they will get it. Maybe we'll get replacement space for some of it, maybe not. Nothing new there, been that way since the days of "200 meters and down". It's just that now there is a "reason" for it that can be pointed to as "justification" when the true justification is the commercial need. The old "we told you so" routine that plays very well into your Agenda. The needs and desires of the ham radio community are thrust aside like so much chaff - By the likes of you and all whom you influence to go along.

This whole thing about "hams have GOT to move to new technologies" is ludicrous on its face. While the FCC has bent over backwards to draw into the ARS every soul with the most mild interest of any sort, largely with little or NO technical interest required, two of their ham-employees (probably the most knowledgeable of those presently there on ARS issues), seem to insist that hams abandon the modes that fit so well into what most hams enjoy doing and instead move toward systems which no one can even define in terms of how, what, who or why. The "why" may be the most important question, and the only answer forthcoming is "because commercials have abandoned the modes hams like to use". No need for relief from spectrum congestion on HF can be shown, in fact there are often wide open empty spaces in most bands. VHF and UHF are even more sparsely populated, despite the full load of (mostly very quiet) repeater pair assignments. It's all a tempest in a very cool teapot and I get the sense the only people very excited are the Carl Stevensons.

> > When Carl and his cadre finally turn ham radio into a glorified
> > trunked cell phone service
>

Bullshit. What you want has been made abundantly clear. By you. You want nothing to do with anything less than domination of the future of the ARS. *LOTS* of us aren't buying it.

>
> > I and a whole lot more hams will just abandon ship. I already have a
> > cellphone. It's very useful but not very interesting.
>
> Secondly, it's abundantly clear that you are TOTALLY lacking in any
> vision for the future that extends beyond what you're comfortable with
> from the past ...
>

I find it very novel that you profess great digital things for the future of the ARS while engaging in a feast of HF SSB while I, the guy "living in the past", am busily working many of the new (and older) digital modes with gusto. Seems like you're another "do as I say, not as I do" sort, and justify it all predicated entirely on the fact that I believe that a ham radio operator owes it to his hobby to learn to use radiotelegraphy, radio's most basic mode. This is all really very revealing.

So what we have is more bullshit from the alleged techie who himself has a microphone stuck in his face. I challenge you to show where you've involved yourself in amateur digital modes in any meaningful way. Bullshit on rrap doesn't count. My HF digital activity goes way back, beyond the early packet days to RTTY on a mechanical model 15 followed by a Commodore Vic 20 with an AIR-1 module (the latest thing at the time), through PACTOR, CLOVER and more lately a number of sound card modes. And yours? All we've seen from you so far is "most of DXCC on SSB...."

>
> Why don't you just get out of the way and let the rest of the world

If you pull me up on QRZ, the map does an admirable job of finding the
postoffice; I am not even on the map. It's zip-based from a rather buggy
Federal file. Been there, done that many years ago and spent more time
getting parts of WI out of Lake Michigan than doing much that was useful
with it.

>Whoa ... going in the wrong direction again ... how about like SS
>100W max, anything over 1W requires APC ???

The only real effect of that rule in SS has been to ensure that hams do not use more than 1 watt on SS.

I don't think that the need for automatic power control has been established. IMHO, those capable of devising modes so new that they are not covered by existing rules should have no problem at all doing what the present rules require of all amateur communications -- manually adjusting the power level to the minimum necessary to achieve the desired communication.

And the old "I desire to be loud" ploy doesn't cut it. :-)

I don't know how such nonprotection could be phrased in the rules, but the
basic idea is that the subbands are meant to be a testing ground for just such
issues. The users of existing modes can always move outside the subbands, but
the experimenters can't.

>
>The numbers may be considered arbitrary without some justification.

I don't really care about power levels as long as they are adequate to bust the
summer noise levels on 80 meters and the SWBC on 40 with less-than-ideal
antennas. The idea of one power level for APC rigs and another for non-APC rigs
is to allow the use of typical ham gear but also to reward the use of APC rigs.

>Don't
>get me wrong ... I *like* the idea of automatically inforcing the minimum
>power
>rule ... however, consider that the max limit for SS in 70 cm and up is
>100W,
>but for over 1W you must use APC ... that's a big difference from 50 W.

That's because SS may be overlaid on top of existing narrowband users. In the
"experimental farm", the whole purpose of the subband is experimentation with
'new' modes.
>
>> 3) The limitations on data/symbol rate and occupied bandwidth of data

To the same extent as today for other modes. Example: When operating USB on the high end of 20, or CW at the low end of 10, or anyplace near a band or subband edge, what do the regs say about keeping the sidebands completely inside the band/subband? Same rules apply in the experimental subbands.
>

>methods of IDing ... such as PSK31 or whatever ...

Without a decoding device? ;-)

The whole point of the auto-ID (which, please note, would NOT be required by the regs at all) is to clue in tuners-by - any tuners-by, not just the technically inclined. Knowing the callsign, anyone interested could find out how to decode the rest of the signal.

Sure. Which is one of the reasons for the whole "experimental farm" idea. Give hams a place to work out PBIs without lots of regs and paperwork. Those who don't want to deal with all the strange signals merely move outside the subband.

That's your right. But if you don't believe that's a factor worthy of much consideration, it would be because you haven't seen it happen or prefer to ignore the likelihood that it might. Would YOU want Carl hounding you?
Cross is said to be a CW operator who likes DX. All the more reason why he "must be careful to avoid any appearance" of allowing his personal preferences to show up in his work.
That automatically would (in the view of one who displays such a personal aversion to Morse code) set him up for just such a charge. The result is pretty well a forgone conclusion, regardless.

Let me be very clear-the advancement of technology in ham radio is a forgone conclusion. Just as is the fact that we WILL lose portions of our spectrum as the need for it by other services grows. It's as inevitable as the rising sun, always has been. In the past FCC has done an outstanding job of providing us with the use of spectrum that was largely sitting idle for our use while it sits idle, to the point that we have become accustomed to considering all 'our' spectrum that isn't covered by international allocations to amateurs, as ours forever. It is not and never was, past the time when it is needed for other services. Many hams don't seem to understand this. Portions of the 430-450 mhz band is an example. Sure, we don't want to lose any of it, but I see it as almost inevitable. The demand by other services is too great.

One more point- the modes hams use today have evolved over time, assisted by advances in technology, to the point that most of them are very well suited to the uses that hams make of them. Some modes and systems are efficient and some are not, such as the VHF/UHF repeater allocations, and should be revised toward more efficient uses. Others, such as SSB, CW and most of the digital modes in use, do just fine. That doesn't mean that further development isn't desirable nor that it should not be continued. But so far no one has shown any valid reason why hams should be lining up to dump everything they've grown to like and that works so well for them in favor of somebody's vague notions of "the way things

should be because I know how to do it and I KNOW it should be" that way.

There are good reasons why commercial concerns have developed the methods they use. Besides the obvious financial benefits of more automatic communications which eliminate staff positions, the efficiencies involved are clear. When communications needs can be met with far less power consumption by modes that operate well in noisy environments it would be folly to NOT adopt them. Such efficiencies are not nearly as important and are not primary to ham radio operators daily activities. The lame mantra that "if we don't adopt the efficient modes the commercials have (or even develop better ones) ham radio will be falling down on its basis and purpose" is so much nonsense. That's ONE of the bases, but by no means the main reason for our existence. And this does not mean that we should not be moving in the direction of better efficiencies, nor that we are not moving in that direction. We are. There has always been a core of radio experimenters, developers, and engineer-hams who engage in that sort of activity as hams, often to the near-exclusion of all other, as that is their main interest in ham radio. Their work almost always comes into the hobby, frequently resulting in considerable changes to our modes and methods *over time*. But to say that it is inevitable that we "must" do what the commercials do, as has been so often done, borders on the idiotic.

Well, that's one way to do it, but it would also put wide
data/digivoice modes at a disadvantage, which is not the idea at all.

> Fencing out SSB as a mode by definition is not the
> libertarian thing to do and could be regarded as elitist
> (how about some help here Cecil?).

Plain ol' voice AM, SSB and FM are already fenced out of those
subbands. Just leave those rules in place as they are.

I see no reason various flavors of FHSS and ALE stuff couldn't do that
under the proposed regs.

> I
> hope the idea is not to fashion the mode to fit the
> YaComWood SSB gear just to accommodate or sell more of them.

The simple truth is that most (not all) new modes on the ham bands
will be "soundcard and shareware" developments. That's why PSK31 leapt
to the fore so fast.

(Besides me, how many hams do you know who have designed and built
complete homebrew non-QRP HF ham stations in the past 10 years?)

reprehensible

The key words are "I allow myself"

It is like wading in a cesspool and complaining you got your shoes dirty. The morning newspaper would tick me off if I didnt just ignore most of the drivel that is on certain pages. You do not read the newspaper letter for letter, article for article, so why do the same for newsgroups???

Use your readers features and you will find the newsgroups quite enjoyable. Use ignore and kill files to rid your view of the posters who have nothing to say or behave badly. Ignore whole threads that are magnets for these types of posters. One pathetic poster always uses the same phrase to open his flames (I think he has it in his clipboard or a template to paste from) and I kill any message with this phrase in it. That also kills the thousand responses to his flames since it is always quoted in the response. What you have left is some useable and interesting reading that will not waste too much of your time.

Some other tips for newsgroup peace... I never get angry when someone flames my posts. I put out my view and opinion and leave it to the intelligent readers to accept or reject. I never reply to a flame on the group though I may send a private email to open a discussion with an individual. Amazinly, these types usually never respond because there is no public attention which they so crave to stroke their egos and massage their feelings of inadequacies and self doubt. Besides, what is so sacred about my opinions and ideas that I should get upset if someone disagrees?

jammer
> that is just a carrier, or a carrier with narrow sidebands?

A CW carrier or something close in b/w ... a CW carrier is the "best" jammer
against a DSSS system ... because it is spread the least by the despreading
in the receiver ... wider signals will be spread even more, thus less of
their
energy will fall in the despread b/w of the receiver.

> >
> >On the other hand, if you wanted 10 bps data rate, the processing gain

> In a band 25 kHz wide?

That's the spread bandwith, which gives a processing gain of 34 dB and
a jamming margin of 18 dB.

WHAT "damage"??? Show us ONE shred of evidence of any
"damage" that has occurred as a result of the 1999 R&O ...

> > As Hans pointed out, the FCC was pretty direct in its message
> > to start using newer technologies
>
> Since Cross *IS* the the FCC as far as the ARS is concerned, and you
made
> your point up close and personal long ago, so what?

Bill is one staffer in WTB ... he has quite a few layers of
management between himself and the Commissioners, ALL
of whom need to be "sold" on any proposals before they
become rules ... in that sense it's an exaggeration to claim
that Bill "*IS*" the FCC ...

> You've pretty well
> demonstrated what he'd face under any other result.

What the hell are YOU talking about? YOU'RE the one
who keeps insulting the guy, not me ... I have nothing but
respect for him ... which is WAY more than I can say for
you.

> > ... in the R&O ... and I haven't

will
> be paid, regardless. When commercial activity wants and needs amateur
spectrum,
> they will get it. Maybe we'll get replacement space for some of it, maybe
not.

Dick, I've seen the potential threats for years and have been constantly
pushing for modernization and growth in the ARS as means to combat
those threats ... I have always said "If we stay stuck in the past, we will
lose the value that we need to protect our allocations."

> Nothing new there, been that way since the days of "200 meters and down".

Now you're carping and bitter about things that happened before you were
born??? How ridiculous.

> It's just that now there is a "reason" for it that can be pointed to as
> "justification" when the true justification is the commercial need. The
old "we
> told you so" routine that plays very well into your Agenda. The needs and
> desires of the ham radio community are thrust aside like so much chaff -
By the
> likes of you and all whom you influence to go along.

Don't blame me for the reality that I've been pointing out for years. I
didn't
create it ... I just pointed it out in an attempt to get you ostriches to
pull
your darned heads out of the sand (or wherever else you'd had them buried).

> This whole thing about "hams have GOT to move to new technologies" is
ludicrous

> on its face.

No, it's NOT ... the more backward we become, on average, the less
value we provide to society in exchange for our allocations and the
privileges they provide ... again, I don't *make* the reality ... I just
point it out in hopes that some will see it and take the necessary action
to preserve the ARS ... I have NO delusions that you will ever be a
part of the solution, rather than a part of the problem.

[snip remainder of Dick's totally unfounded tirade against the FCC]

>More correctly - the microphone switch turns on and off and is
>indeed digital.

Sorry, the "microphone switch" is MANUAL. If you want it "digital"
then you have to have automatic carrier-control circuitry there
which can be either digital or analog.

If you had VOX it would be a combination of analog and digital with
analog predominating; no manual switch needed.

Color your 1 KHz today - Sine dye.

Gosh, yes, Cecil. I'll TELEX Bill Gates on that right away, with
a carbon copy to Gordon Moore and Jack Kilby.

It's so nice of you to tell us that an itinerant portrait painter was
working on "digital electronics" as early as 1840. Thank you.

>CKB

And just WHY would that be, "CKB."

>This lecture brought to you free by K0CKB, who that hopes you
>are not offended by anything you read, inferred, assumed, presumed
>or otherwise guessed I might have possibly meant as demeaning -
>unless of course you are personally a humorless nitwit who WANTS
>to be insulted. In which case be my guest.

"Gentlemen can disagree without being disagreeable." - HB

We can change "gentlemen" to "gentlewomen" or even
"gentlebeings" but that does not change the fact that the last
paragraph is simply snide, sarcastic, and unkind.

Over three years ago there was a minor discussion in this
newsgroup concerning amateur radio bandspace in the HF
region and the NTIA's projected 10-year spectrum occupany.
That survey included the fact that over 1 MHz of additional
bandspace had been requested by amateur radio on HF
(notations indicated an ARRL staffer comment as source).

Nothing whatsoever has been done in the interim by any
amateur radio group or individual in regards to enlarging any
bandspace on HF for amateurs.

Instead, there are the usual petty little squabbles over sub-
division or no sub-division of the existing narrow bands, plus
a lot of additional squabbling and name-calling (e.b., "nitwits").

No individual or group seems to have the guts to try for more
bandspace on HF. Everyone seems happy to sit within narrow
confines of band limits and throw pillows back and forth, then

pretend it is "battling for a just cause." Pfui.

Keep up the good pillow fighting.

I responded to that poll. Did you?

> Works for Bill Clinton, doesn't work for
> them.

The ARRL BoD developed an idea and presented it to the FCC. Hans has
developed a different idea and has done the same. I'm in the process
of developing a modification of Hans' idea.

What have you done in this area, Brian?

> They need to lead, not follow or take another poll. Or just get out
> of the way.

The ARRL BoD thinks giving lots more privs to Tech Pluses and Novices
is lead. They also think turning the Novice subbands over to 'phone is
leading. I agree with the first part but not the second.

What do you think?
>
> > 4) It will allow coordination of on-air experiments by the use of old

The "decades old modes" include AM, FM, SSB, RTTY, SSTV, AMTOR and
even packet.

Tell ya what, Brian, you lead the way by running Part 15 power levels
for all your HF operating.

It depends on if the 17 meter band was considered a band at the time of working all bands. Just like the states. Of course Alaska and Hawaii were not states in 1957. Was there a 17 meter band in effect when the person in question made the claim?

"Worked all bands" *could* possibly mean working citizens band and freeband too, just to throw another log on the fire.

> "damage" that has occurred as a result of the 1999 R&O ...
>

The FCC itself noted that it has observed no "damage" to the
HF bands since restructuring happened, specifically the CW
test requirement. If anything, today's code tests are tougher
than the old ones, because the Farnsworth method is used
(high speed characters spaced at 5wpm). And they didn't
change the writtens except for the routine updates to the
question pools.

The mess that was on 14.313 was caused by a few people who
did pass a 13wpm test (of course not everyone who passed
13wpm caused those problems :-)). And this trouble wasn't
the sort that newbies might inadvertly cause. A "newbie"
is someone who might make mistakes but soon learns to
avoid those mistakes, a "lid" persists in making the same
mistakes over and over.

from Dick:
> One more point- the modes hams use today have evolved over time, assisted by
>advances in technology, to the point that most of them are very well suited to
>the uses that hams make of them. Some modes and systems are efficient and some
>are not, such as the VHF/UHF repeater allocations, and should be revised toward

>more efficient uses. Others, such as SSB, CW and most of the digital modes in
>use, do just fine. That doesn't mean that further development isn't desirable
>nor that it should not be continued. But so far no one has shown any valid
reason
>why hams should be lining up to dump everything they've grown to like and that
>works so well for them in favor of somebody's vague notions of "the way things

>should be because I know how to do it and I KNOW it should be" that way.

I would agree that SSB and CW work quite well, but realize that people
like NASA's JPL don't use CW for communicating with deep space
probes. I can see a use for say high speed packet on HF for among
other things long distance health and welfare traffic from a remote
disaster site. All you need is an equipment setup, antennas and
a source of power (generator or from a car battery) and needing no

infrastructure like that needed for the internet or short distance VHF/UHF packet. We get on the internet via dial up with 56K modems, so something similar might be possible on HF that can take QSB, QRM, QRN and such you don't get usually on a phone line. We would need some subbands where the 300 baud rule is not applied.

SO a new mode should do something better than the old mode, or do something new. And how would "better" be defined? "needs minimal equipment", "Best performance with lowest power, i.e., gets through when not even CW would", "can be interfaced with existing radios to do a new mode, i.e., packet over 2m FM radios (not the best way of doing it from a spectrum efficiency viewpoint, but required a minimum of new equipment). Sure it's a tall order to make a great new mode, but we all will like it when someone does accomplish it. The DXers will be able to snag more weak DX while using stealth antennas with say 50W, etc....

Larry, for starters, you're a bit of a moron which is usual for the bully. You're capable of rational thought, playing well with others, and keeping your mouth shut when it's inappropriate to blurt out the first thing that comes to your mind. 20+ years in the Air Force proves that. But now you've no UCMJ constraints and you feel you must gain an audience by making outrageous (and often bigotted) statements. Works for Rush; Doesn't work for Larry.

For that you lose.

Only you can change your profile. You can work hard to contain your emotions, or remain undisciplined and give in to every toddler-like urge that you have. Or show a little maturity and say something thought provoking, not just more emotional garbage.

It's out of my hands.

Good luck to you in growing up,

and 73,
Brian

Larry, why does the FCC issue HF licenses with no Morse/CW requirement to
other services that utilize HF?

But in the Amateur Service, we have to take and pass a Morse/CW exam even if
we have no intentions of ever using CW? Why are we required to be more
"professional" than the professionals?

I've passed the code exam. I have an amateur license and a GROL. Exactly
where do I benefit in this scenario?

The radio service regulations are so full of contradictions. Lets make some
sense of it instead of just going along with it.

Brian

The microphone switch turns on and off the exciter as does other
spring-loaded, silver-plated contacts.
```

Morse is only one of an infinite ways that a CW signal can be encoded. A computer could easily handle most of them, although manually Morse encoded OOK CW is probably the hardest.

Morse encoding can be used on modes other than OOK CW. Repeater IDs are often made using Morse.

Having passed the code exam, you now have HF access. That could be a benefit
to you.

>The radio service regulations are so full of contradictions. Lets make some
>sense of it instead of just going along with it.

Our making sense of the FCC regulations buys us nothing. The only way to "make
sense" of the regulations is to persuade the FCC that different regulations
better represent the public interest wrt a particular radio Service.

Actually, I believe that the Farnsworth spacing makes copying code easier, not harder. The additional time between characters gives the applicant more time to recognize the character and to write it down.

Putting the Novices in the General CW portion of the band 25+ years ago is
Lead. To do so in 2002 is not lead. The damage is irretrievably done, no
more novice or tech+ licenses.

Keeping the Novice power limits in the new "phone" band is not lead, if I
read here correctly, especially when the Novices are relocated and cannot
use the old authorization anyway. Help me out if I got it wrong.

We don't want to interfere with bleeding edge modes, do we?

> Tell ya what, Brian, you lead the way by running Part 15 power levels
> for all your HF operating.

Might as well in the Novice subbands. No ones there and it would save on the power bill.

But why do you want me to bear all of the burden? How many times would I have to repeat myself before you stopped saying, "Say again all after CQ?"

Yes, I suppose I need to state the obvious to Larry.

"Where we find obvious internal contradictions and discrepancies in the Part 97 regulations, and obvious external contradictions and discrepancies between Part 97 and other Title 47 regulations, we petition our government to get their act together and make it read like one document rather than a hodge-podge of lazy bureaucratic nonsense."

How's that?

>That's your right. But if you don't believe that's a factor worthy of much
>consideration, it would be because you haven't seen it happen or prefer to
>ignore
>the likelihood that it might.

If that would work, I would do it in a heartbeat, but I don't think that ARRL will win the current 70 cm RFID spectrum battle by threatening to insult the FCC. As you say, believing that to be a factor is YOUR right, too, but you appear rather foolish in thinking that insulting the FCC is the way to win anything.

> Would YOU want Carl hounding you?

Been there; done that, Dick, and Carl and I both learned from each other.

>Cross is said to be a CW operator who likes DX. All the more reason why he
>"must be careful to avoid any appearance" of allowing his personal
>preferences to show up in his work.

What appearances. Did it ever dawn on you that it is possible that Cross actually does not allow his personal preferences to show up in his work?

> Let me be very clear-the advancement of technology in ham radio is a forgone
> conclusion.

I sure would hate to see the long tradition of Amateur Radio embracing technology come to an end.

> Just as is the fact that we WILL lose portions of our spectrum as the
>need for it by other services grows. It's as inevitable as the rising sun,
>always
>has been.

The value brought by the Amateur Radio Service will be balanced against the value brought by others who want to use the spectrum. Most of our spectrum battles of late have been vis a vis Part 15 operation, and we have not lost most of that spectrum. Part 15 has been given more access to Amateur spectrum, but as a secondary user.
>In the past FCC has done an outstanding job of providing us with the
>use of spectrum that was largely sitting idle for our use while it sits idle,

>to
>the point that we have become accustomed to considering all 'our' spectrum
>that
>isn't covered by international allocations to amateurs, as ours forever.

Back when nobody wanted spectrum above 30 MHz, it was really easy to keep it. Nowdays, virtually all spectrum is shared between users, in all sorts of sharing relationships (from co-primary to primary/secondary). Most amateur bands are shared with ISM and NTIA authorizations.

>Portions of the 430-450 mhz band is an example.
>Sure, we don't want to lose any of it, but I see it as almost inevitable.

What part of the 420-450 MHz band are we set to lose? I know of no rulemaking proposal that seeks to take it away from us.

>When
>communications needs can be met with far less power consumption by modes that
>operate well in noisy environments it would be folly to NOT adopt them. Such
>efficiencies are not nearly as important and are not primary to ham radio
>operators daily activities.

If we find ourselves sharing more and more of our bands with more and more users, spectrally efficient modes that operate well in the presence of noise will become very important to us. And even if there is no one else on the band, being able to hear and use signals that are deeper into thermal noise would be an improvement.

> The lame mantra that "if we don't adopt the efficient
>modes the commercials have (or even develop better ones) ham radio will be
>falling down on its basis and purpose" is so much nonsense. That's ONE of the
>bases, but by no means the main reason for our existence.

Ham radio has value without new technologies, but if it had adopted your attitude in 1914, it would not exist today. How far behind do you think we can be and still have value to our regulators?

Depends on the time of discussion. "all-HF-band" today means something
different than it did before WARC-79, just as "WAS" means something different
today than in 1957.

Kim was not licensed until after all of the current HF amateur bands were open
to US hams. Therefore, her claim to have worked all HF amateur bands lots of
times is simply not true.

asked for comments on FCC Part 97 relative to RACES and FEMA ...

While organizing an Net Control Station Operator's training session/manual, I came across a definition of RACES on the FEMA website and that "quoted" section of Part 97 on another site and came to this conclusion:

"There is considerable debate about ARS participation during RACES activation by a local EM/EOC director. The debate is based primarily on the wording of the definition of "RACES Station" by FEMA and the FCC regulations. FEMA defines RACES Station as 'an amateur radio station licensed civil defense organization.'"

If read as "an amateur-radio-station-licensed civil defense organization" or "...licensed, civil defense organization," then only a civil defense organization with an amateur radio station license is a RACES Station. ARS stations registered with a civil defense organization are not RACES stations but are registered with RACES."

Further, Part 97, E, (c) and (d) seem to indicate that the FCC is thus distinguishing between a RACES Station ("licensed to a civil defense organization") and an ARS station "registered with a civil defense organization and operating in RACES."

The second part of your question, can "any amateur who with a civil defense organization--regardless of their affiliation with the particular
RACES organization--can communicate/transmit on any RACES net?" is, I believe, not really -- but ...

According to FEMA, it is the RACES Officer (a General class or higher ARS operator appointed by the government Emergency Manager or director of the Emergency Operations Center) who "develops the application" that is filled out by the ARS operator in order to gain "registration" or affiliation with a civil defense organization. That RACES Officer makes a recommendation to the EM/EOC as to whether to accept the ARS applicant.

A later question by another poster asked, "How can one have a radio ... service without RACES (Radio Amateur Civil Emergency Service) being licensed as a radio station? I believe RACES is/will be the umbrella ARS network collaborating with the civil defense organization (i.e., Red Cross, EOC, etc.) to form the RACES network.

And still another poster suggested that ARES and RACES are two faces of the same service. In fact, as Incident Command System (ICS) standards become more common place, ARRL ARES affiliates are developing response plans that look very much like RACES plans. Many areas are describing their response organizations as ARES/RACES or RACES/ARES in order to affiliate with both ARRL and FEMA in the local response plan.

> the FCC-mandated authority to limit participation in their nets only to
> the local amateurs who are certified members of their organization.

Larry's right, but it really goes farther than that. The Emercency
Manager or director of the Emergency Operations Center (depending upon
the structure) appoints the ham who is the RACES Officer. The RACES
Officer designs the application and recommends affiliation with the CD
organization -- not necessarily "members." Also, affiliation or
registration with the CDO does not guarantee that all affiliated hams
may participate in any given RACES event or response. The RO, along
with the selected Net Control Station can limit participation
according to the Incident Command System response plan for the event.

How this is different than ARES lies in the Memoranda of Understanding
between the ARS and the CD services. Given certain events or response
requirements, it would not be unheard of for a Formal Directed ARES
Emergency Net to limit, by instructions, participation of ARS
operators. Stretching it, after open check-in to a Skywarn Net, NCS
could instruct in such a way that some operators would have nothing to
report if they weren't observing certain events.

In areas where RACES/ARES have unified responses, the EM/EOC usually
appoints the local ARES Emergency Coordinator as RACES Officer or the
ARES group asks the RO to double up as the ARES EC. Sometimes An
Assistant EC is appointed RO, or sometimes an Assistant RO is
appointed EC if the organizations are large enough.

> This is crystal clear, not the least bit "gray," and is solidly enforceable.

What has not been crystal clear is that long adjective structure in
the FEMA definitions: as "an amateur radio station licensed civil
defense organization." So many people were boggled. Is it "licensed
[to]," "licensed [by]," "licensed [as]?" I read it as RACES Station is
a CD organization with an ARS license (even if there is no ham as the
"control operator"). That's what the new protocol hopes to end.

That part is correct. Note that with the attrition of RACES licenses by
expiration, there soon will be no RACES stations. This may also fall out of
FEMA's definition....

>Further, Part 97, E, (c) and (d) seem to indicate that the FCC is thus

Correct - until it repealed RACES station licenses (existing stations continue
to exist until their licenses expire).

Yup.

And while most VEs use the Farnsworth method, they will substitute a "regular" 5 wpm test if requested. Examinee's choice.

The number of written tests for an Extra was reduced from 5 to 3 and the total number of questions in those tests from 190 to 120.

Do not confuse the RACES statsion control operator (who has been
required to be a licensed ARS operator for several decades now) with
the RACES station trustee who could be a non-amateur. With the
abolition of the RACES station per se, the anility pf a non-amateur
to be such a trustee goes away just as the abilityof a nn-amateur
tooperate the statsion went away several decades ago.

Nonsense.

The ARRL BoD proposed instant upgrading of all existing Novices and Tech Pluses
to General way back in 1998. FCC said no.
>
>Keeping the Novice power limits in the new "phone" band is not lead, if I

>use the old authorization anyway. Help me out if I got it wrong.

The old Novices and Tech Pluses could continue to use the old allocations if
they are reallocated to the "experimental farm" idea.

The 200 W power limit has to do with written testing.

I'm beginning to think the power limit thing should just be dropped. Allow full
power on all the subbands after reallocation to the experimental farm.

Right.

So a single interfering carrier 20 dB above the desired signal wipes out the desired signal.

But in that same 25 kHz bandwidth, at least fifty 12 wpm CW/Morse signals could coexist with no significant interference, even is some were 20 dB above others (and decent receiver selectivity was used).

DeLorme does not map your mower shed nor your house. They map a distance
from an intersection and assume a residence is there.

Luckily, the exams are computer generated and there is a timing consistency
in character elements and spacings.

That in itself makes it easier to copy than manually formed, infinitely
variable elements and spacings.

There are many "technical regulations" that do not lend themselves to
easy or immediate enforcement via FCC monitoring.

Cheers,
Bill K2UNK

Here we go again. "I've got more time in the chow hall..."

I'm looking over my shoulder. The Novice bands had long since lost their luster in 1986 and 1987.

> >To do so in 2002 is not lead. The damage is irretrievably done, no
> >more novice or tech+ licenses.
>
> Nonsense.

Not nonsense. The FCC is not issuing any more Novice or Tech+ licenses. Why?

> The ARRL BoD proposed instant upgrading of all existing Novices and Tech
Pluses
> to General way back in 1998. FCC said no.

Who the hell wants an instant upgrade? Just stop the divisions and segregation in the band. If the Novices had been in the General CW portion of the band they might have had a chance. I didn't say phone, did I? Instead you now have a dead license class because of a dead idea.

> >Keeping the Novice power limits in the new "phone" band is not lead, if I

What mode?

> The 200 W power limit has to do with written testing.

Really? Correct me if I'm wrong (and you will), but weren't the old, bonifide Extras limited in power in some of those segments? I think only on 10M were they allowed the 1500 (2000) watts.

> I'm beginning to think the power limit thing should just be dropped. Allow
full

Ed, its fascinating to see everyone divying up the Novice subbands. Too bad the bands didn't receive much interest when they were supposed to be the training ground for new operators.

Have at it.

Brian

Right you are, but so far there are darn few hams needing
to work deep space
probes.
A number of the current and older digital modes do well at
terrestrial weak signal
work.

What you soon bump up against is the human factor. How
fast can the fastest typist
type? Why do we need 56k circuits for 60 word per minute
typists? How many large
databases can you generate and forward in any potential
disaster? Methinks the
"grande" factor has overpowered common sense in far too many
instances. It's always
better to be overprepared, but we risk forcing
underpreparation by urging hams to
abandon the tried and true for the untested and largely
unavailable.

OK, but we already have stuff that will do all that! And
have had for many years!
PACTOR is probably capable of handling any disaster comms
for which hams will ever
need to provide communications. Sure, there will be even
better modes developed,
have already been, depending on what ones criteria for
'better' happens to be. None
of this provides cause to dump what we already have proven
by use.

Dick,

With all due regard for the welcome 'common sense' you seem to try to bring to this discussion, your last sentence puzzles me.

Nobody in this discussion (that I've seen -- I admit I filter some of the gadflies) has even remotely suggested that we "dump what we already have proven by use."

I pulled my old ARRL Radio Designer software (V1.0) out tonight to run some simulations. I think the last time I ran it was on Win 3.11 or some such ancient OS. Pukes and dies on Win 98.

Anybody here running it on Win 98? How'd you do it?

Hans, K0HB

Nope, different battle with different players. You don't have Carl yelling
"Luddite!" at everyone who finds value in a mode more than a week old.

> As you say, believing that to be a factor is YOUR right, too, but you
> appear rather foolish in thinking that insulting the FCC is the way to win

So who is insulting the FCC? Stating facts or 'if the shoe fits' isn't an insult.
And it's definitely a fact that Carl yells "Luddite!" at every perceived
opportunity. It is also a fact that Cross can be assumed to prefer to avoid getting
in the way of one of Carl's fusillades.
Oh, I forgot, you see insults behind every bush.

It is NOT happening and won't, at least for some hams who didn't get their
licenses via the "Extra in a Day" program noted in the online ham radio news
yesterday. All bets are of for those folks. Either way, all the gloom and doom

about all the bad things that will happen to us all if we don't dump every mode dating back more than six months is so much nonsense.

Yes and on a non-interference basis as well. So try to enforce that. Once in a while hams will actually be able to find the interference source. All too often you will not, I'm afraid. Been there and done that, long ago, on the job, not just as a ham.

Which I believe to be authorizations that are rarely or never used. Comes the day when they are routinely needed, what will happen? You really think that just because we keep up with Jones and Company in their latest modes that will make difference? Not likely.

>

Take a look at the international amateur allocations. They cover 10 mHz of that band IIRC. hen ask around among public safety comm agencies to find out how virtually impossible it is to obtain a frequency authorization in the 450 mhz region. Everything is loaded up and widely shared under tone access. I'm surprised we still have anything left there that isn't covered under the international allocations.

> attitude in 1914, it would not exist today.

Nonsense! The early days of radio desperately needed all the technical improvement they could get and they did get it. Today is a different situation entirely, and surely you know that. So why the sour attitude? How many times must I say it before it soaks in? Time marches on, people invent new things, they are tried, tested, adopted or discarded, and if attractive and useful, absorbed over time into use within the ARS. So it has always been, so it will always be. But the fact that so many hams like to use modes that have been around a long time
(one of my personal favorites is Hellschreiber) is proof that evolution of ham radio has reached a point beyond which it will take some clear and demanding need for large shifts in technology for drastic changes to be made. Sometime in the future conditions may indeed force drastic technical changes. But until they do, Carl will still be talking digital and working SSB. I think the people doing all the yelling at hams about "Tecdnology or else" know this and understand it.

> How far behind do you think we can
> be and still have value to our regulators?

Behind what? Ourselves? Carl? FCC? ARRL? Who?
Maybe if you only work CW you can consider yourself to be behind. I don't work only CW, I do lots of other modern things. But I did make a CW contact yesterday. With W6BNB, Bob Shrader, the author of the excellent technical textbook "Electronic Communication" a book that I've mentioned here before. I understand that he works only CW, and with a 'Cootie Key' sideswiper, at that. Heck of a nice and interesting fellow. And no Luddite by a long stretch. I'm quite sure he's not "behind".

>A more basic question is regarding "awareness." Of anything.

It still all comes down to what Lennie CLAIMS he knows and what he CLAIMS is "good" for Amateur radio.

In this case, as in most everything Lennie spouts here, it is zero.

I aliken Lennie to the people who show up in my ER spouting "medical" terms they have heard on episodes of "E.R." or read in "Reader's Digest"....They have heard/read "just enough" to be able to repeat the terms, but they have little comprehension of what they say.

They know the words, but they "know" nothing.

Just like Lennie.

1200 baud packet is far from dead around here, we have at least a
couple hundred dxers tuned to ten +/- nodes. But it's a very different
ballgame from packet of the 80s, today it's not something you "do" for
jolies like packet was back when, it's now just a fully automated
utility which provides almost instantly-available hard info for HF
dxers and not much more. You bet it works.
>
>
> All that Hans is proposing is to set up a place where such development can
> flourish.
>
There hasn't been a new HF mode developed or adopted in ham radio yet
which needed any setaside spectrum space to "flourish", every one of
'em has sucessfully duked it out with modes which were already in use
in the same space going back to AM, then ssb, and more recently PSK31.
Or it died. NBFM and DSB are two examples of duds. If a new mode has
sufficient merit to capture enough market share in competition with
the rest of the available choices the results will be obvious. Welcome
to the basics of the capitalist free market and to hell with welfare
for modes.

If you give a listen to the commercial bands around our bands, you will hear all sorts of signals that are not permitted on our bands under the current rules. The limitations on modulation modes and data rates preclude the development of new HF modes in ham radio that could "flourish" in a setaside spectrum place.

>So a single interfering carrier 20 dB above the desired signal wipes out the
>desired signal.

And that would occur if that signal appeared anywhere in the 25 kHz bandwidth.

>But in that same 25 kHz bandwidth, at least fifty 12 wpm CW/Morse signals
>could
>coexist with no significant interference, even is some were 20 dB above
>others
>(and decent receiver selectivity was used).

That "decent receiver selectivity" is key to one major advantage of narrowband over SS in the context we are discussing. Not only can those 50 signals coexist with each other, they can do so if the PEP of the 50 signals combined is less than the dynamic-range of the receiver can handle. Typically, that will be about 90 dB. Typically, only 3 or 4 of those signals would be really loud, so that would give about 75-80 dB of total rejection of the out-of-passband signals. Now, this is a simplification, because the really close-in signals wouldn't offer 90 dB of dynamic range, but the general idea holds.

Remember, this started with an off-the-cuff statement by me that a really slow data rate would allow some true SS in a 25- or 50-kHz bandwidth. I was not implying that such was an optimum system. It might be intersting to see what could be done on HF with a data rate of <1 b/s, though.

>That in itself makes it easier to copy than manually formed, infinitely
>variable elements and spacings.

The majority of "manually" sent Morse encoding is done with an electronic
keyer.

The majority of code sent with a hand key is close enough to the Morse standard
that a human does not find it easier to copy than machine-sent, more precise
code. To the contrary, the slightly longer character spacing sent by most
operators makes it a bit easier.

The words "infinitely variable" are an exaggeration.

The premise in all this divvying is that the training ground for new operators will be elsewhere in the band, right along with the more experienced operators who will be able to offer some Elmering. Although some of those experienced ops did slide up the band a bit to the Novice/+ segments, most did not.

Is that another one of those "what he said, what you heard" sort of things. Carl has repeatedly told us that he does not believe that hams need to stop using any mode in Amateur Radio that pleases them. Your "dump" stuff is, well, a dump...

> Yes and on a non-interference basis as well. So try to enforce that. Once
>in a while hams will actually be able to find the interference source. All too
>often you will not, I'm afraid. Been there and done that, long ago, on the
job, not
>just as a ham.

I agree, but until we prove this to the FCC with real cases, they will continue to gut the effectiveness of radio services by allowing more and more unlicensed stuff in their bands.

>> Ham radio has value without new technologies, but if it had adopted your
>> attitude in 1914, it would not exist today.

>Nonsense!

Why is it nonsense? For you to believe it is nonsense, you must believe that what I said is not true. So that means you are saying that if ham radio had chosen not to use the technology of the day in 1914, it would still exist today. THAT is nonsense, Dick, and YOU know it!

Is this another one of those "what you said and what you really meant" sort of things?

>> >> Or even on one of those bands?
>> >
>> >What's your point?
>>
>> Your credibility.
>
>What is wrong with my credibility?

On the subject of the use of the non-phone amateur HF band segments, you have little to none.

>Do you have an accusation to make?

Just an observation: You talk about the use of various subbands and modes in amateur radio, but you are evading
simple questions:

When was the last time you operated in one of those subbands, Brian?
Or even on one of those bands?

They are not trick questions.

>> You have talked about the conditions on various HF bands, but you give no
>> indication of actually having used those bands.

>I have.

But not when, or how often, or with what equipment.

Example: I was on 80 meter CW less than a week ago. Made a few good contacts. When's the last time
you were on 80 CW?

It's a simple question. No tricks.
>> Which poll are you talking about? I'm referring to the one asking about
>> "refarming" the Novice bands.
>
>The "rarely or never" poll in which the ARRL concluded there was no reason
>to change anything.

Wrong poll. I'm talking about the refarming poll. Was on the ARRL website and in QST.

>> >> > They need to lead, not follow or take another poll. Or just get out
>> >> > of the way.
>> >>
>> >> The ARRL BoD thinks giving lots more privs to Tech Pluses and Novices

>> >Lead.
>>
>> I was a ham 25 years ago. Were you?
>
>Here we go again. "I've got more time in the chow hall..."

It's a simple fact that I have been an active ham for three and half decades,
using a variety of bands, modes and equipment. It's called qualifications.

> The FCC is not issuing any more Novice or Tech+ licenses.
>Why?

- Less admin work.
- Administrative cluelessness.
- Desire to purge the database of SKs.
- Lowered requirements for all licenses means FCC sees no reason for new
licenses in those license classes.
- Tech Plus has become "Tech-with-HF".
- Few new Novices in recent years.
>
>> The ARRL BoD proposed instant upgrading of all existing Novices and Tech
>Pluses
>> to General way back in 1998. FCC said no.
>
>Who the

[expletive deleted]

>wants an instant upgrade?

All the pre-1987 Tech Pluses who got Generals after restructuring, for one.

>Just stop the divisions and segregation in the band.

Which means what? No more subbands by license class? No more subbands by mode?

>If the Novices had been in the General CW portion
>of the band they might have had a chance.

Then why did the FCC reject the ARRL idea, and the AH0A petition to do just
that?

> I didn't say phone, did I?

You said "stop the divisions and segregation in the band".

>Instead you now have a dead license class because of a dead idea.

Not dead to those who have one. Look at AH0A figures for renewals and renewals
in the grace period for those "dead" classes.
>
>> The 200 W power limit has to do with written testing.
>
>Really? Correct me if I'm wrong (and you will), but weren't the old,
>bonifide Extras limited in power in some of those segments?

All US hams were limited in power in those subbands to provide a "level playing
field". It was not always that way. Dumb rule, actually.

>True. About the time "packet ready" rigs came out packet was about over.

How many hams do you know (besides me) who have designed and built complete
homebrew HF stations that are not QRP?

How many amateur rigs of any kind have you built from scratch, Brian?

Kinda premature to make such a judgement. It's been only two years.

> If anything, today's code tests are tougher
> than the old ones, because the Farnsworth method is used
> (high speed characters spaced at 5wpm).

They are actually easier, not harder. For one thing, 13 and 20 wpm
tests
are gone. While Farnsworth is the usual method, "regular" 5 wpm can be
had on request. And as W1RFI notes, 5 wpm Farnsworth allows more time
to write down the characters.

5 wpm Morse works out to 1 character every 2.4 seconds. With "5/13"
Farnsworth, most of that 2.4 seconds is writing time.

> And they didn't
> change the writtens except for the routine updates to the
> question pools.

Just the opposite! The number of writtens and the total number of
questions for a given license dropped due to restructuring.
>
> The mess that was on 14.313 was caused by a few people who
> did pass a 13wpm test (of course not everyone who passed
> 13wpm caused those problems :-)).

Not necessarily. Code waivers for the 13 and 20 wpm code tests were
created in 1990.

The mess that was on 14.313 was caused by a few people who
did pass several written tests (of course not everyone who passed
written tests caused those problems :-)).

> And this trouble wasn't
> the sort that newbies might inadvertly cause. A "newbie"

Agreed to a certain extent. The real problem is one of attitude and
"culture". Some newbies and old timers simply have bad attitudes and a
destructive on-air "culture". Example: A few, even in this newsgroup,
think it's OK to cuss on the air.

They don't use SSB, either. Nor SS, as far as I know. Nor HF

NASA uses modes and technologies suited to the environment and
available technologies. So do hams. But radio to NASA is just a means
to an end, not an end in itself. Radio to hams is the goal.

> etc....

The main thing needed is that a new mode must have a certain special something that makes hams WANT to use it. PSK31 has a mixture of things - low cost, narrow bandwidth, good performance/cost/bandwidth ratios, easy to use, etc. It's a mix. Hitting the mix right is the challenge.

The development of PSK31 led to the development of specialized hardware like the "Warbler". End result is a "tail wags the dog" station - a tiny, inexpensive
rig controlled by a much more complex and expensive computer. Watta concept.

LONDON (Reuters) - Squeezable mobile phones could soon be adding new meaning to keeping in touch.

Researchers at MIT's Media Lab in Cambridge, Massachusetts have developed a new vibrating rubber cellphone that can transmit vibrations along with words.

Unlike other cellphones that vibrate instead of ringing, the MIT latex prototype has five tiny speakers that you wrap your fingers around and which vibrate against the skin at around 250 times per second.

"Beneath these speakers sit pressure sensors, so you can transmit vibration as well as receiving it," New Scientist magazine said on Wednesday.

"When you squeeze with a finger, a vibration signal is transmitted to your caller's corresponding finger, its strength is dependent on how hard you squeeze."

Students who tested the vibrating cellphones used them to add emphasis to their conversations and even developed their own type of Morse code, according to researcher Angela Chang.

She believes the new cellphone has a big advantage over mobile phones because you can communicate without anyone knowing what you are saying.

"And imagine actually being able to shake someone's hand when you close a business deal," she said.

-30-

Who says you'd necessarily be shaking their *_hand_*?

Hello, all!

A friend of mine, another astro-type, is also an electronics technician. He maintains a lot of pretty high-end hospital equipment and has done so for about 15 years. He has seen the various messages on our astro club list serve about the Ham activities that were done in connection with Astronomy Day, and we have been exchanging ideas on small-bore radio astronomy.

Yesterday he mentioned that he had "thought about being a Ham" from time to time but "didn't want to learn Morse Code." At least, that's what he SAID, at first.

But, what came out in the exchanges that followed told me that it wasn't the code that stopped him, not really, but rather the fact that a "professional, FCC-licensed technician" was going to step DOWN into HAM, or rather, AMATEUR radio.

I'm telling you, this is a PROBLEM to be considered down the road, if the Ham Community is serious about its future. This is NOT a trivial matter, in my view. The whole avocation needs an image upgrade for the new century, regardless of what is actually on the air.

> wouldn't offer 90 dB of dynamic range, but the general idea holds.

I don't consider 90 dB blocking dynamic range in an amateur HF rx to
be "decent". The Ancient Ones got that sort of performance 40 years
ago. Of course, I've been spoiled by a rig with more than 120 dB BDR -
at 5 kHz spacing.

> Remember, this started with an off-the-cuff statement by me that a really slow

Sure. But the whole point of the "experimental farm" idea is to allow
hams to
muck around with whatever PBIs they want - optimum or not. Without
lotsa paperwork and such.

> It might be intersting to see what
> could be done on HF with a data rate of <1 b/s, though.

You mean even non-optimum systems can be interesting? Some would call that electro-politically incorrect. A few "professionals" might want to boil you in transformer oil for suggesting such a thing. ;-)

I didn't think I was. But you're right to remind us of that. The
"RACES station control operator" is a ham -- appointed, named,
selected by the RACES Officer (a General class or higher ham). It is,
in fact, the RACES station trustee which is in question and which the
new regs would catch. TNX.

I'm suggesting that instead of having to go through threads on CW,
Rules and Regulations, Death of Ham Radio, etc. to find comments about
how dumb certain posters are or about how some callsigns are
destroying ham radio, we just agree to have one single long thread --
since all of the other threads eventually turn into those comments. It
usually occurs somewhere around the 5th to the 10th posting. <sarcasm>

Since when do you need a 56k circuit for a picture? You
don't, unless for some strange reason you demand Internet
download speeds. Seems to me like dedication of resources
far beyond any rational need, at least in this era.
If the goal is to duplicate the Internet that becomes a
different matter. As well as a huge limitation on usage of
those resources. I can't imagine a ham radio that would
allow all users of our spectrum to have the communications
capability of the Internet on ham radio. I don't think
that's technically feasable.

This is a common situation among radio technical professionals who did not receive the start of their interest in the field via ham radio. They don't seem to realize the potential for furthering their knowledge and experience through the wide variety of experimenting possibilities that exist in ham radio. Sometimes they find out through ham friends what they've been missing, and go on to become hams. Mostly they just avoid the "amateurs" as though such activity was beneath a radio professional.

One unlicensed poster to rrap comes to mind, and I doubt I need to name him. Evidently he has so little to do in his retirement that he spends most of his time criticizing and bashing hams and ham radio. May be some Freudian problem at work there, too.

Another anecdote comes to mind. I recently attended the funeral for a former co-worker after which I and a group of other former work mates, most of whom were licensed hams, were visiting. One fellow who was not a ham was asked if he had ever got a ham radio license, and he replied, "No, I just work with radio, I don't play with it". Pretty well sums up that attitude and its flaws. They don't understand that the limits placed on only "working" with radio are largely absent in ham radio. We're free to experiment and in conjunction with that experimentation, radiate signals almost without restraint by comparison. Within the rules and within reason, of course. Most of what one learns experimenting as a ham will transfer directly to a professional radio setting.

You might want to mention this point to your friend.

> I'm telling you, this is a PROBLEM to be considered

It does make one wonder how many technical professionals
who know little about ham radio would view it differently if
they knew all the facts. They can't seem to get past the
"hobby" aspect of it. It is truly their loss.

BTW I spent 40 years working as a "FCC licensed
professional", too. But I started in ham radio as a kid.

And it is curious indeed that current and former FCC officials would urge us to do that which rules at best make difficult, to adopt the modern modes and modulations that we are at least hampered, or at worst prevented from using on our bands. Why wouldn't one wonder what is going on?

Not exactly the whole story, by any means. I used to make a practice of scanning across the Novice bands to see what was on, and, after Novice Enhancement, almost universally the answer was - nothing. Seems all the Novices were up on 10 meter SSB. THAT was the big problem. FCC made a huge mistake in allowing Novices SSB access if they in fact intended for them to gain skill in code operations. When I was a Novice the band segments were loaded - with Novices. We all talked to each other on CW, and the crowd did indeed draw many higher class licensees down into the Novice bands. That changed when they got SSB on 10 meters. It became a matter of
"No use even checking, they're all up on 10 meter SSB".

So you're not paying attention these days, Ed? To Carl or Dale Hatfield either? Carl has repeatedly howled about our "50 years behind" the commercials technology. If years of that and Hatfield's stark warning don't mean something on that order maybe you can do a better job of explaining it to us than they did.

Since you edited out my entire explanatory paragraph, I'll answer by putting it back in.

Nonsense! The early days of radio desperately needed all the technical improvement they could get and they did get it. Today is a different situation entirely, and surely you know that. So why the sour attitude? How many times must I say it before

it soaks in? Time marches on, people invent new things, they are tried, tested, adopted or discarded, and if attractive and useful, absorbed over time into use within the ARS. So it has always been, so it will always be. But the fact that so many hams like to use modes that have been around a long time
(one of my personal favorites is Hellschreiber) is proof that evolution of ham radio has reached a point beyond which it will take some clear and demanding need for large shifts in technology for drastic changes to be made. Sometime in the future conditions may indeed force drastic technical changes. But until they do, Carl will still be talking digital and working SSB. I think the people doing all the yelling at hams about "Tecnology or else" know this and understand it.

I don't think I read too much into all the pronouncements of Carl, Dale Hatfield, Ed and others when they seem to insist that we hams are "(some long number of time up to and including light years) behind the industry....."

Where does it say that the "RACES officer" (as you describe it above) need also
have an amateur radio license? Neither the trustee nor the "responsible
person" in charge of the organization (i.e., the "officer") need hold a
license.

I'd normally put something creative and witty here, but this group doesn't like creative and witty... :-)

A problem with this faceless (and clueless) mode of exchange, of only screens full of characters and words, is that anyone can pretend to be anybody they want...and then feign "outrage" and "offense" at others not believing them. We, the readers, cannot be sure of anything posted solely by others, therefore the only believability is to have other references available...and mentioned.

It's rather coincidental that ol' Black Silver suddenly has his "wife" start posting in a "lecture mode" when he is confronted. That has several advantages -

1. It can take the onus off the original discussion (misdirection).

2. It can start a whole new thread of "outrage" and "impoliteness."

3. It can make the writer feel so very much "superior" and think he has won "message points."

Pfui. I am very suspicious of "coincidences" like the CKB exchange.

The rest of the radio world regards TTY and RTTY as
telegraphy.

The amateur radio world thinks TTY and RTTY are "data."

"Data" is a character in the fictional "Star Trek" universe.

The Northridge earthquake occurred on January 17, 1994. A bit after
4 in the ack-emma. About 10 million or so folks "noticed" it.

It's nice to know amateur radio can be prepared for catastrophies a
day ahead of time. Remarkable ability.

Yes, it can be done on fast-scan TV using a whole 6 MHz of emission space. Wonderful stuff.

>Repeater IDs are often made using Morse.

Yes, very important to identify some station locked into a certain fixed frequency by frequency coordinators with local and national repeater listings available.

The technical reason behind automatic identification is simplicity. Unattended stations were doing that before WW2 on radionavigation beacons at LF. Seven decades ago. Those were all mechanical "keyers." Voice over some LF beacons did not come in until after WW2.

Our two-year-old combo FAX and answering telephone has digitized voice recording, can play back messages on demand, has several prerecorded voice prompts in permanent memory. Commercial consumer electronics item costing less than $150. The only time it has "failed" was when some NYC NBC staffer kept trying to send FAXes to our machine by mistake and it kept printing the same FAX until it ran out of paper. No doubt the NYC NBC staffer can be blamed for "not knowing morse code?" :-)

>> Dang Len, I knew you were old but I didn't know you were *that* old.

I'll pause in chopping down the cherry tree but have to admit that I was on Al Vail's side, not Sam's. Sam was just a hack artist in the early 1800s. Most itinerant artists of that time were the "portrait-painter" variety. Film cameras hadn't been invented yet, you understand, so the itinerants went around making others' egos feel good.

Sam was a fair salesman (itinerants had to be to survive) but only a hack when it came to art. He was seduced by the electricity side of the Force and played around with mechanical gadgetry. If he hadn't met Al Vail there wouldn't be any "morse code."

Vail's family already had the kilobucks to spare, being manufacturers of railroad things, plus some spare room in the Vail factory. It was Vail who turned Morse around from his "recording pen" system to the dot-dash coding scheme. Morse never did get the recording pen part of his gadget working successfully. [BIC pens were over a century in the future]

Eventually, Morse got too full of hisself and split from Vail. This is not unlike some current morsemen...so fond of themselves and their ability that they assume a god-like attitude.

>He also might have known that guy who used to make silencers for weapons.
>Hiram somebody.

Hiram Colt? Hiram Winchester? Hiram Brakob? Hiram Roll?

I know only Saint Hiram of Newington and His acolytes.

NB: "Acolyte" is similar to "electrolyte" in that it is fluid and soaked, may generate RF energy when provoked, but it normally only mildly toxic to normal humans.

>
>http://www.arrl.org/announce/regulatory/5MHz/ RM-10209

Obviously the Old Switch-hitter from MN cannot read worth shit on
what was written. ALL of it, not just some selective quoting. Let's
unroll some alphanumeric gobbledegoop and go to the FCC site
instead of Big Mother.

Firstly, an "RM" is like a recommendation from either the FCC or a
request from an outside party for a regulation change. If the legal
procedure is followed and the FCC thinks the outside party is still
with mental faculties intact, it assigns a number to the RM and
puts it out in front of the public for all to see.

Anyone can go to the FCC website and click up the ECFS or
Electronic Comment Filing System and enter either "RM-9404" or
"RM-10209" in the upper left blank block of the ECFS form, then
click the "Submit" button at the form bottom. That returns all the
available documents in a list form (if over 10 items, click on "all" in
blue at the bottom to get the entire list). Each individual comment
submittor is linked to the document, indicated by the blue letters.
Click on the link to get the documents themselves.

RM-9404 is a request to add all of 2.1 KHz of band at around
136 KHz for amateur radio use plus making the present free band
(very limited antenna-power, but license free) at 160-190 KHz a
ham band. It has received less than 50 comments (in addition to
the original request from Booth, Freret, Imlay, and Arrl) in the
three years it has existed. At least three different power companies
have filed objections to the proposal and B-F-I-A has filed a Motion
to Strike their comments. All of that is still on public record and
the FCC hasn't made any ruling on it.

RM-10209 is younger than 9404 and concerns the proposed "60 meter" band of 150 KHz just above 5 MHz. [5250-5400 KHz for the math-challenged] Special permission has been granted by the FCC for a dozen licensed radio amateurs to "experiment" in communications in that proposed band. Apparently all concerned are unaware that other radio services have existed in the band space for a half century and more, know its characteristics so well that it can be coded into a computer program (ICEPAK, a free download from NTIA, origin the VOA, ICEPAK is included in footnotes to the B-F-I-A comment). Less than 100 total Comments have been received by the FCC on RM-10209.

What is interesting is that New Zealand has pioneered experimentation on 136 KHz, beginning in 1990, followed by several other countries in the 1990s. That makes it a dozen (12) years ago. LF and VLF has been largely empty of users for over two decades, users being largely LF broadcast stations. The 160-190 KHz "Lowfer" band has been FREE for over three decades with limited power and antenna size. Apparently the ARRL feels it should be a ham band after all this time of freedom.

The "60m" band was last seen in the March 1995 NTIA document, "National Spectrum Requirements." That is 7 years ago, and fitting what I described as "over 6 years" for "new bands." Brakob may want to argue that nit-picky point but it has been KNOWN to be desired by amateurs for at least 7 years. The 60m band doesn't seem to be on any US WRC-03 preliminary view statements, nor the LF band. Quite probably because the FCC hasn't ruled on either RM yet?

Meanwhile, a dozen hams are "experimenting" with the 60m band as if the characteristics are "new" or something. Perhaps that is "pioneering" or "breaking new ground" or just wishing all the parties could do that sort of thing? The true "pioneering" of HF took place rather before WW2, before the time of the "new experimenters."

In the LF region, OTHERS have led the way. The ARRL is just a follower...just as it didn't pioneer PSK31 in the UK or Yurp. For the 60m band proposal, I cannot for the life of me see the value of "experimentation" on HF propagation that has been known for over a half century by dozens of other radio services!

Nobody need go to predigested comments on the ARRL site or feed on some doses of spin (aspirin helps overindulgence of spin). All of it is still on the FCC site under their ECFS. ECFS content may be hard to take for some who need the reassurance of Big Brother's soothing pep-talk words. The gutless, those afraid to learn the bigger picture can content themselves with the ARRL website and feel secure.

Everyone else can now go ahead and quibble and squabble over sub-dividing the narrow little HF ham bands. Feel secure in your respective righteousnesses and closed quarters. It will make you feel proud.

So what? Where is it mandated that the needs of ham radio shall forever coincide with that of some elusive "industry" when the intent, details and goals are so far divergent? You need what you need, want what you want, afford what you can pay for. So far Uncle Sam hasn't subsidized a single piece of my ham radio gear, particularly as being tax deductible. You KNOW "the industry" can't say the same.

For some of us, the 17th was just an extension of the 16th, especially if we
hadn't been to bed yet. :-)

Well, this is one way to view things, I guess. However,
the person in question is exactly the kind of fellow I am
interested in recruiting into the avocation. He's a solid
guy, friendly, and makes a good impression with the
public when he's in front of them. I'm going to keep working
on him. Oh, I forgot to mention, he's a First Phone who
was eased out of his radio station job, along with a lot of
other people apparently, in the 1980s. But, of course, he
still does work for radio stations, as a "consultant." What
a deal, eh? Only glory lies ahead for us all, I'm sure.

Hey Val

What reasons does he give for his belief that it would be a downgrade?

Status? respect? Perhaps he doesn't like the nerdy stereotype?

What does he want the ARS to be? What do you want it to be?

How do you want us to "upgrade" our image? is perhaps the most
important question.

My favorite game is "Wind Up Kitty". This is when you take an adult,
misanthropic cat and pick it up (kindly) by the midsection with one hand and
hold it about 6 inches off the floor. With the other hand you twirl the
tail (again, kindly; I'm not suggesting you twist it off) and make "rrrrr
rrrr RRRR RRRR" noises. Then, when the cat is at his height of annoyance,
sputtering and snarling like Len Anderson, put it down on the floor and let
it
go. The cat will speed off like one of those little cars, and forever after
spit and fuss at you like Leonard Anderson when caught with his facts
astray.

Wrong again, organ grinder with egg white (or something) all over your face:

1) Go to http://gullfoss2.fcc.gov/prod/ecfs/comsrch_v2.cgi

2) Enter RM-10209 in the block entitled "Proceeding".

3) Mash the button labeled "Retrieve Document List".

4) Enjoy.

We do...you just don't have a very acute sense of what IS "creative and witty"...Comes from being an out-of-touch loser, I think.

>A problem with this faceless (and clueless) mode of exchange, of
>only screens full of characters and words, is that anyone can
>pretend to be anybody they want...(SNIP)

How true. YOU (speaking of clueless) pretend to be a communications professional with some knowledgeable outlook on Amateur Radio. The only one fooled, however, is yourself.

>...and then feign "outrage" and
>"offense" at others not believing them.

You have THAT one down pat!

>We, the readers, cannot
>be sure of anything posted solely by others, therefore the only
>believability is to have other references available...and mentioned.

In this part you do well. Lotsa stuff copied, perhaps plagerized, from other sources and websites. The only "evidence" we have of any skill or knowledge on your part is your ability to research these sites to reinforce your rantings. In this you excell. No accountable evidence of any practical experience in Amateur (or any other form) Radio.

>Pfui. I am very suspicious of "coincidences" like the CKB exchange.

I am sure you are even MORE suspicious when the facts keep undermining your rants.

No doubt.

>download from NTIA, origin the VOA, ICEPAK is included in
>footnotes to the B-F-I-A comment). Less than 100 total Comments
>have been received by the FCC on RM-10209.

I guess we don't need to do anything to determine OUR needs there, huh
Lennie? Yeah...just lay back and try to pass on someone elses' work? That's
fine for YOU perhaps, but others prefer to do thier OWN work.

You should try it some time. It's fun.

>The 160-190 KHz "Lowfer" band has been FREE
>for over three decades with limited power and antenna size. Apparently
>the ARRL feels it should be a ham band after all this time of freedom.

Hardly free, and one watt of HF and the restrictions put on it grossly
limit any utilitarian use the band might otherwise be able to provide....And
bully for the Kiwis, Lennie...But U.S. Amateur's cannot operate on that
allocation under thier regulations, now can they?

>Meanwhile, a dozen hams are "experimenting" with the 60m band
>as if the characteristics are "new" or something. Perhaps that is
>"pioneering" or "breaking new ground" or just wishing all the parties
>could do that sort of thing? The true "pioneering" of HF took place
>rather before WW2, before the time of the "new experimenters."

But not with modes/techniques/practives that are used TODAY.

>In the LF region, OTHERS have led the way. The ARRL is just a
>follower...just as it didn't pioneer PSK31 in the UK or Yurp.
>For the 60m band proposal, I cannot for the life of me see the
>value of "experimentation" on HF propagation that has been
>known for over a half century by dozens of other radio services!

Well gee whiz, Lennie... ! ! ! Let's tell the FCC >>YOU<< can't see the
need and we'll just put the "86" on that project, huh...?!?!?

>The gutless, those afraid to
>learn the bigger picture can content themselves with the ARRL
>website and feel secure.

Speaking of gutless, when are you going to tke that Amateur exam, Lennie?

>Everyone else can now go ahead and quibble and squabble over
>sub-dividing the narrow little HF ham bands. Feel secure in your
>respective righteousnesses and closed quarters. It will make
>you feel proud.

And YOU can go ahead and quibble and squabble over policy and practices of
a radio service in which you are not licensed nor have any practical experince
or vested interest.

Putz.

Was or wasn't? Doesn't matter. If what you say is true it souds like he would have an attitude coming in, rather than spending the time and developing one from within. I wonder if Larry will remind him "Not to let the door...

> I'm telling you, this is a PROBLEM to be considered

Yeh, you've told us this before. Conviently you ignore what your friend actually said (didn't want to learn the code) and derive from that that he didn't like the word "amateur."

Lets go ahead and try to fix this thing now and get it over with.

We don't want the word, "Amateur Radio."

We can't use the word, "Professional Radio."

"Middle of the Road Radio?" Smacks of CB.

If we tried, "Not for Profit Radio," all the Christian shortwave broadcasters would say we were horning in on their territory. Besides, lots of "non-profits" manage to have stinking rich CEO's.

How about "Radio Enthusiasts?" Most couldn't pronounce it let alone spell it.

"Hobby Radio?" No, who would want to stoop to that?

"Society for Uncreative Radio Anachronism" There's just something about that that I don't like.

"Hiram's Hams?" Might as well go with that. Pass it by your ET friend and see what he says.

>possibilities that exist in ham radio.

Some licensed radio amateurs fail to realize that
experimentation does not always require a license to
radiate RF energy deliberately.

>Sometimes they find
>out through ham friends what they've been missing, and go on
>to become hams. Mostly they just avoid the "amateurs" as
>though such activity was beneath a radio professional.

A stronger probability is their (the licensed amateurs) mindset
which turns off many a pro.

>One unlicensed poster to rrap comes to mind, and I doubt I
>need to name him. Evidently he has so little to do in his
>retirement that he spends most of his time criticizing and
>bashing hams and ham radio.

Poor baby. Your mindset got kicked in the nose, did it?

>May be some Freudian problem at work there, too.

Not really. The mindset-enhanced, bunting wavers seem to
have the much-greater problem.

> Another anecdote comes to mind. I recently attended the
>funeral for a former co-worker after which I and a group of
>other former work mates, most of whom were licensed hams,
>were visiting. One fellow who was not a ham was asked if he
>had ever got a ham radio license, and he replied, "No, I

>just work with radio, I don't play with it". Pretty well
>sums up that attitude and its flaws.

If there is one thing exhibited by the long-timer one-by-twos
in here it is a definite LACK OF SENSE OF HUMOR.

Poor baby. :-)

>They don't understand
>that the limits placed on only "working" with radio are
>largely absent in ham radio. We're free to experiment and in
>conjunction with that experimentation, radiate signals
>almost without restraint by comparison.

Germann was talking about radio astronomy. Astronomy
doesn't radiate signals, it RECEIVES signals at wavelengths
ranging from deep UV to as low as one can go in frequency.

>Within the rules and
>within reason, of course. Most of what one learns
>experimenting as a ham will transfer directly to a
>professional radio setting.

Of course, and those are: Manual telegraphy skills, maintenance
of a nationwide telegram network (ever since 1914), working DX
contests, and continuous pioneering of the "shortwaves."

> You might want to mention this point to your friend.

No one (according to the groupie experts in here) can "ever KNOW
anything about amateur radio unless they become licensed and
"qualified." Point that out, too.

Grant of the amateur license provides the heretofore secret "key"
to QST, QEX, CQ, 73 encryption so that all may become "Real
Hams" by finding out the Real Truth! A most important point.

> It does make one wonder how many technical professionals
>who know little about ham radio would view it differently if
>they knew all the facts. They can't seem to get past the
>"hobby" aspect of it. It is truly their loss.

...as I said above. :-)

> BTW I spent 40 years working as a "FCC licensed
>professional", too. But I started in ham radio as a kid.

Some believe you never left that childhood. :-)

Nonetheless the words are mathematically and logically true.

>> like NASA's JPL don't use CW for communicating with deep space
>> probes.
>
>They don't use SSB, either. Nor SS, as far as I know. Nor HF

Sorry, old-timer, but NASA indeed does use SSB, now as a backup to the TDRS (Tracking and Data Relay Satellite) relays, but in older spaceflight days used it on HF as part of the DSN (Deep Space Network) and for astronaut and recovery communications during Mercury, Gemini, Apollo, and Skylab programs.

In Apollo digitized biomedical data from en-route astronauts was deliberately made "noisy" with pseudo-random shift generators to enhance the signal-to-noise ratio. Does NASA use any sort of Spread Spectrum techniques? Yes, but the details haven't been publicly released yet.

>NASA uses modes and technologies suited to the environment and
>available technologies. So do hams. But radio to NASA is just a means
>to an end, not an end in itself. Radio to hams is the goal.

NASA uses ALL technologies to fulfill their assigned missions.

Contrary to the long-timer's opinion, NASA does indeed use some kinds of radios as an end in itself: Radar-like earth imagery, emissions from planetary bodies are two examples. Radio is vital to the health and safety of all manned space missions.

Some radio amateurs use their federal merit badges as a form of personal gratification and one-upmanship to attempt besting unlicensed-in-amateur-radio "civilians." They also use designed and manufactured by commercial makers' radios and claim "expertise" in radio. :-)

>The main thing needed is that a new mode must have a certain special
>something that makes hams WANT to use it. PSK31 has a mixture of
>things - low cost, narrow bandwidth, good performance/cost/bandwidth
>ratios, easy to use, etc. It's a mix. Hitting the mix right is the
>challenge.

PSK31 was designed and developed by a Brit. Europeans did the
on-air trials.

Besides APRS, what has US amateur radio accomplished in the way
of experimentation and new modes in the last three decades or so?
Note that APRS won't work without the GPSS or GLONASS.

>The development of PSK31 led to the development of specialized
>hardware like the "Warbler". End result is a "tail wags the dog"
>station - a tiny, inexpensive
>rig controlled by a much more complex and expensive computer. Watta
>concept.

A single microcontroller IC these days is the "complex and expensive
computer." Nearly every manufactured ham transceiver has a micro-
controller and has had one for at least 15 years.

Do you need a link to Microchip, makers of the PIC series of do-it-
yourself microcontrollers? www.microchip.com

You'll have to look there yourself. I can't do all your teaching.

Val, you might gently remind him that the 1st phone no longer exists. I know, I had one. It is now the 'General Radiotelephone Operators license'. I also had a commercial telegraph ticket (not much use anymore, but ..). The FCC has been 'dumbing down' everything. My guess is that various companies can now determine who is qualified (and, not just perchance, downgrade wages as well). I used to be the chief engineer of WWHG, a 5000 watt AM-FM station. As he has discovered, as one door shuts, another opens. So, now that many establishments have their lower priced spread, one can act as a consultant since many of their employees also have much less grasp on the subject. Perhaps he has seen the article on eme on 24 GHz with 85 watts? Then again, maybe not. Certainly the standards have been lowered all over in an attempt to reduce wages and make the entrance into amateur radio easier; but amateur radio should be an entrance and amateurs should (hopefully) be continuously improving. There will be a number of folk on the air that are quite capable of keeping up with the guy - as well as going on quite a bit more. Give it another spin, this time with some technical articles
of what amateurs (at least the ones with a little giddyap-and-go) are doing.

Ed, I can read Part 97. Unless Riley says otherwise, "I desire to be loud" does work. If you don't like the wording you can petition your government to make a change. Even if Riley said it, it could be challenged.

Wrong-O. I was on months prior to enhancement and it was dead then.

> FCC made a huge mistake in allowing Novices SSB
> access if they in fact intended for them to gain skill in code
operations.

The big mistake was made decades earlier in segregating the Novices. Just
how many decades did the FCC conspire against CW?

> When I was a Novice the band segments were loaded - with Novices. We all
talked
> to each other on CW, and the crowd did indeed draw many higher class

Welp, not so in late 86, early 87. But you'll claim otherwise.

So you support Hans' idea? Let me log on to the FCC site and see what you
said.

Oh wait a minute, I get it. The conspiracy is even deeper. The FCC has
been trying to kill CW for decades and decades, and they're also trying to
put down any attempts at innovation. They're trying to wipe us out and give
our frequencies to Radio Evangelists.

Brian

Ed, I'll let you slide this time. Hey, could the ARRL VEC invert the "code" and make a noise where there are supposed to be spaces and the examinee copies the silence? Then the examinee could leave the paper blank and have 100% copy.

>keyboard-masturbation on your part.

No, "CKB." The "Lowfer" band at 160-190 KHz was already being
used over 30 years ago...by licensed amateurs.

The 136 KHz bandslice was already okay for NZ amateurs a dozen
years ago followed by some Yurps after that and before the ARRL
could afford Booth, Freret, and Imlay to lay billing on them for a
formal RM proceding. Old news, really. I would surmise the ARRL
was desperately looking for something to "advance the amateur
cause" and decided to join the lowfers by making the request formal.

The 60m band proposal was already started in 1995. Hello? Can
you do any arithmetic? Seven years ago. That start is in an NTIA
document, not on the ARRL website. The formality of an RM came
in the year following the Lowfer RM.

That's about it, "CKB."

What's so pathetic about it is that both RMs were mentioned IN
HERE by myself before B-F-I could charge billing to ARRL.

The NTIA's 1995 Report indicates that hams had asked for a LOT more bandspace in HF than the mere 150 KHz slice for 60m. Over ten times that much bandspace. Nothing more in 7 years.

Whatever happened to such requests?

>This would be a good time to learn to laugh at yourself. Or, develop
>multiple personalities!

No problem with laughing. Lots of problems with Multiple Personality Disorder, Hans...oops, sorry, "Colleen."

>That way you won't be laughing at you, you'll be laughing with you.

You ought to talk to this "Jack Mehoff" guy that posted in here a while back (he has a callsign) or Broose or the ever-popular W2DNE.

Better yet, work over the little monkey from Tennessee.

>CKB

Now, about that vanity call... :-)

Let me go look in Part 97 for "qualifications."

I was an ARRL member before I held a license. The ARRL wasn't worried about
my "qualifications." I've been to the FCC website, and missed the part
about commenting without "qualifications." But Jim demands my
qualifications.

Who are you to demand anything?

> > The FCC is not issuing any more Novice or Tech+ licenses.

one.

Nothing instant about it. They met the requirements years earlier.

> >Just stop the divisions and segregation in the band.
>
> Which means what? No more subbands by license class? No more subbands by
mode?

By License class. Their might actually be some rationale for "by mode."

> >If the Novices had been in the General CW portion
> >of the band they might have had a chance.
>
> Then why did the FCC reject the ARRL idea, and the AH0A petition to do
just

In what decade did the FCC reject this ARRL idea? the AH0A petition?

> > I didn't say phone, did I?
>
> You said "stop the divisions and segregation in the band".

Look Jim, if the Novices were in with the General CW band in the late 70's
and early 80's this discussion might not be taking place. To suggest it in
the waning years of the 20th century as any kind of fix is absurd. You just
want more fone.

> >Instead you now have a dead license class because of a dead idea.

According to the FEMA document, Guidance for Radio Amateur Civil
Emergency Service, at http://www.fema.gov/library/civilpg.htm, in
Section 2-3 at
http://www.fema.gov/library/civilpg.htm#2-3. Procedures for
Establishing a RACES Organization,

"2-3. Procedures for Establishing a RACES Organization.
The following procedures are to be followed for establishing a RACES
organization:

"a. To establish a RACES organization, the Director, State or local
government Emergency Operating Center (EOC) or Director of Emergency
Management (or designated representative) should first appoint, in
writing, a reliable amateur to serve as the RACES Officer. This
individual serves as a liaison between the RACES organization and the
Director's office and assists in the development of the RACES
organization, recruits members, and keeps the Director, EOC, informed
of all RACES activities, progress, and needs.

"b. The RACES Officer is a General Class Amateur, or higher,
thoroughly knowledgeable of FCC Rules and Regulations and familiar
with the functions of the Amateur Radio Relay League (ARRL) and the
Amateur Radio Emergency Services of the ARRL. Individuals with strong
organizational abilities, good verbal and written communications
skills, and experience in emergency center operations are ideal
candidates."

I was NOT talking about "the 'responsible person' in charge of the
organization," which you added parenthetically to be "(i.e., the
'officer')." Both a. and b. indicate that the "RACES Officer" is an
amateur, specifically "General Class Amateur, or higher."

It is possibly a confusion over what is RACES that we have been
discussing. RACES is not the civil defense organization -- it is a
cooperative effort between the civil defense organization and the ARS,
under the auspices of FEMA and local or State government Emergency
Management operations. Without the ARS, there is no RACES, only the
civil defense organization. Without the civil defense/FEMA/government

participation, there is no RACES, but there could be ARES.

Further, the "RACES station" as defined by the FEMA and referenced by the FCC is licensed to the civil defense organization/agency. Perhaps that's why we have thought that RACES was the agency rather than the cooperation.

It probably isn't worth pointing out that the mode currently
used for digital communications over optical fiber is also
OOK CW. The only difference is that the carrier frequencies
are in the license-free 200 THz band, and rather than the complex
International Morse encoding they use the simpler "on" is 1 and "off"
is 0 encoding.

>
>> Anybody here running it on Win 98? How'd you do it?

I checked into this a bit at work today. Apparently Compact software had been sold to Ansoft. Ansoft chose not to continue to support ARD, probably because they felt it competed with their present product line. The program does not run on 95 and 98 because it would need to be recompiled. ARRL does not own the rights, but had sold it under a licensing agreement.

Ansoft does have a freeware student version that does most of the things that ARD used to do.

For info, see:

http://www.arrl.org/ard/

I used a reasonable number for two-tone, third-order IMD dynamic range because I am not sure which dynamic range best equates to spread spectrum. It is moot either way, because no practical implementation of SS has 90 dB of jamming margin.

>Sure. But the whole point of the "experimental farm" idea is to allow
>hams to muck around with whatever PBIs they want - optimum or not.
>Without lotsa paperwork and such.

I agree, not everything done in ham radio need be optimum, and it is sometimes hard to say what is "optimum" anyway.

The only potential problem I see in the "no paperwork" idea is that the Amateur Radio Service has always consisted of communications that are publically decodable. I am not sure we are ready to hear signals that we have no idea of knowing what they are or how to decode them. If we solve that by requiring that the encoding method be publically documented, other than the current limitations on bandwidth, we are right where we are right now with the rules, except that we can do what we want in any part of the band.

Because the "smart" thing to do is to prepare the file "off-the-air"
and then send it all at once instead of typying in real-time on the air.

> How many large
> databases can you generate and forward in any potential
> disaster?

Ditto my last comment. If the files are prepared off-line, there could be
many...with considerable more detail included than typing directly into
the airwaves.

> Methinks the
> "grande" factor has overpowered common sense in far too many
> instances.

Methinks your not thinking beyond real-time circumstances.
Do you type directly into the internet? No, you use an
email application to write the email and then it gets sent as
one completed message in milliseconds.

> It's always
> better to be overprepared, but we risk forcing
> underpreparation by urging hams to

Why? I am perfectly happy with the Farnsworth method in use right now. On the air, I can copy Morse code at Farnsworth timing, conventional timing and even do a passable job at lousy timing.

>> The words "infinitely variable" are an exaggeration.

>I'll bet they're not, especially when Dick doesn't want another ham to copy
>his sending.

Okay, as long as we agree that we are talking about the code Dick sends if he doesn't want another ham to copy his sending, and not a widespread problem in Amateur Radio as a whole, I am content to accept "infinitely variable" as a reasonable approximation of how you see it.

The question I have, though, if it truly is not an exaggeration, is how often the "infinitely variable" timing gets as long as a minute or more between characters in your perception of Dick's sending?

Just what do you (Dick) think goes on at an ex parte?

The ramblings, rantings, or whatever that take place in
RRAP mean nothing to the FCC...and that is as it should be.

If you think the FCC staff is in any way intimidated by
anyone in RRAP then you are truly amazing as to your
thought processes.

To whom at the FCC do they mean anything? The FCC cares not at all
about dialog/debate/discussion held on RRAP.

I was just going to add that the auto forward digital robots
that operated in the lower 5KHz of the novice bands for
years under an extended STA did not auto-ID in the clear
code or voice. Remember to keep the auto-ID'g CW OOK to 5
WPM (yawn!) or less. ;-)

I know two besides you. Both of the ground up homebrew
systems were very nice. Remember, the ARRL used to have
complete HF ham station construction articles in their
handbook.

PSK31 is a beautiful creation. FHSS on 80-40-15 will
probably require more than a soundcard, some software, and
an YaComWood rig.

Now I'm really cornfused! Here's what W1RFI sent me from ARRL....

Hi, Hans,

I checked into this a bit at work today. Apparently Compact software had
been sold to Ansoft. Ansoft chose not to continue to support ARD, probably
because they felt it competed with their present product line. The program
does not run on 95 and 98 because it would need to be recompiled. ARRL does
not own the rights, but had sold it under a licensing agreement.

Ansoft does have a freeware student version that does most of the things
that
ARD used to do.

For info, see:

http://www.arrl.org/ard/

Excuse me for butting in, but as I have stated before, if
the RFID crowd shows that those bad old Hams have the
potential of jamming their IDers resulting in luggage left
on the tarmac and are, in effect, hampering "homeland
defense" in this war, we could lose it all.

The ARRL made their position clear with regard to the Novice
bands when they supported the STA's to allow auto-forward
digital robots in the first 5KHz (choice spots) of the
novice bands a few years back (before the no-code debacle).

>
> The premise in all this divvying is that the training ground for new operators

Slow coding in the novice bands is not dead yet. I worked
two (one was a new op.) at 7.101 MHz last weekend.

Ed doesn't have it _quite_ right. ARD runs on some W98 systems but not on others. It's a 16-bit Windows (3.1) program that its manufacturer was uninterested in maintaining it as newer versions of Windows came out. (What, you thought Windows was really backward compatible with older versions? :-) So, if it runs on your machine running Win98, great! But it may not.

Serenade SV (see the URL Ed cited, below) is probably your best alternative.

I see the public documentation rules being the same as today. No need to change them.

One point of the "experimental farm" idea is to have a place where the symbol/datarate and occupied bandwidth rules are greatly relaxed, without

relaxing them all over the band. Suppose I want to try out a mode that allows both slow data and digital voice in a 4-5 kHz bandwidth. Is that a narrow band data mode or a wider digital voice mode or what? In the "experimental farm" it doesn't matter, as long as the mode is documented and the signal is inside the subband edges.

Another point of the "experimental farm" idea is that the widening of the 'phone bands is not a good idea, IMO.

That's what the FCC effectively said when they issued RACES station licenses.

How FEMA defines RACES and how the FCC defines RACES don't necessarily match.

There is no such official organization as ARES. That is the ARRL's delusion.

Perhaps it's not the call signs or the people with the call signs.
Perhaps it's the type of radio operators that those posters are
representative of. Perhaps showing intolerance towards intolerant
people is a way of showing them how it feels to be on the receiving
end for a change where they don't have misinterpreted rules and
regulations to hide behind.

I tend to stay away from repeaters, but if I wanted to discuss the
weather or the wreck that was holding me up in traffic with my friend,
that's what I'd talk about and yeah, it would piss some people off.
If I wanted to tell him that my tomatoes had grown a foot and had
blooms already, that's what I'd talk about. If I wanted to talk about
making molasses and how it went, that's what I'd talk about. I don't
appreciate someone telling me that my conversation doesn't meet their
criteria of things to talk about on a repeater, so I need to move
along so that they can talk about politics, religion, who is picking
up the kids and bring a gallon of milk home. I don't appreciate the
"regulars" on a repeater keying over the top of someone making
comments about 'where did they come from" or "who cares about that."

I don't appreciate someone making comments about "Roger Beeps" because
a ham has bought a Yeasu Memorizer at the local ham fest and doesn't
know about the 1750 hz. tone burst switch on the bottom of the radio.
I don't appreciate people telling other people that the FCC requires
announcing your call sign at the beginning of a conversation when they

don't do it themselves. But they don't have to, because everyone just knows who they are. I don't appreciate people telling a ham that he is operating illegally because he says "break" to try to gain access to a repeater in use and that 'break" can only be used for emergency according to pseudo FCC rules and regulations. I don't appreciate regulars on an open repeater telling regulars from a broken repeater that they can't use that repeater until theirs is fixed.

I don't appreciate someone telling a ham who had lost his voice to cancer that it was illegal to use Morse Code over a repeater and he needed to quit operating. The operator did quit operating in this illegal mode. He died. I don't appreciate it, but I tolerate it to the point that 99 percent of my transmissions are on sideband simplex.

In an unmoderated ng, they don't have those pseudo rules and regulations to beat people over the head with. In an unmoderated ng, they can't claim ownership of the frequency or repeater with any validity. In short, they can't control what people say and it is a control and an ego issue.

People are just too inconsiderate and intolerant unless it happens to be them who becomes the "victim" of the intolerance. When that happens in an unmoderated forum they pick up their marbles and run home to mommy. On a repeater, they can claim ownership or rely on their friends to make sure that the repeater is used properly according to their protocols and pseudo FCC rules and regulations. That doesn't cut it in an unmoderated ng.

If their is a death to ham radio, it will be from the operators who can't tolerate honest mistakes or the fact that some people may actually want to talk about things that don't interest them personally and their attempts to control what they talk about and how they talk about it.

Just look at it as a lesson in role reversal.

How did I know that Lennie would venture beyond the scope of "Amateur Radio Policy"..???

>A stronger probability is their (the licensed amateurs) mindset
>which turns off many a pro.

I've found more people turned off by the aristocratic, snob-nosed "professional elite" than I have vice versa.

I know a lot of engineers who are Ham operators.

I know a lot of engineers who don't care about Amateur radio one way or the other, simply because they have enough "radio" stuff at work to want to do it at home, too. None have expoused an anti-ham attitude like Lennie the Loser for ANY reason.

>>One unlicensed poster to rrap comes to mind, and I doubt I
>>need to name him. Evidently he has so little to do in his
>>retirement that he spends most of his time criticizing and
>>bashing hams and ham radio.
>
>Poor baby. Your mindset got kicked in the nose, did it?

I think it is YOU with the bruised nose, Lennie. Val GOT his license. You are too cowardly.

>Germann was talking about radio astronomy. Astronomy
>doesn't radiate signals, it RECEIVES signals at wavelengths
>ranging from deep UV to as low as one can go in frequency.

Nope. Several radio astronomy groups have, in times past, obtained FCC permission to operate emmiters for the purpose of EME-type experimentation.

SETI is a receive-only program.

>>Within the rules and
>>within reason, of course. Most of what one learns
>>experimenting as a ham will transfer directly to a
>>professional radio setting.
>
>Of course, and those are: Manual telegraphy skills, maintenance
>of a nationwide telegram network (ever since 1914), working DX
>contests, and continuous pioneering of the "shortwaves."

Always the bitter loser, Lennie?

How does your wife validate waking up next to a loser like you? Or is she down the hall...kinda like the rest of your life?

>Grant of the amateur license provides the heretofore secret "key"
>to QST, QEX, CQ, 73 encryption so that all may become "Real
>Hams" by finding out the Real Truth! A most important point.

"Real Hams" participate in the program and have what you don't, Lennie...."practical experience".

>> BTW I spent 40 years working as a "FCC licensed
>>professional", too. But I started in ham radio as a kid.
>
>Some believe you never left that childhood.

Pot. Kettle. Black.

Nuff said....Now...go abuse your wife with more of your "watch me set these "amateurs" straight" armchair heroism, Your Putziness.

mike coslo wrote, about a fellow who views membership
in "amateur radio" as a downgrade:

>What reasons does he give for his belief that it would
>be a downgrade?

Well, his exact words had something to with "professional"
versus "amateur" and the fact that he felt that "amateur" did
not fit his view of himself. Now, to me, the word "amateur"
has a different connotation BUT that does not cut any ice
with those to whom it has an, er, unfortunate spin.

> Status? respect?

Sure, those things are involved. When someone is on the
outside looking in, well, he gets a different view.

>Perhaps he doesn't like the nerdy stereotype?

I don't think this is a problem with him, per se, except as
the term "nerd" might apply to someone who is not really
top-flight at what he is doing.

>What does he want the ARS to be?

I don't think he has any idea, really, except that he thinks
it is somehow not in tune with his view of himself. For me,
this is a marketing problem for Ham Radio and NOT a
problem with my friend.

>What do you want it to be?

Been around the block on this one; don't care to go there
again. Check with the Big Boys about that.

>How do you want us to "upgrade" our image? is perhaps
>the most important question.

Been around the block on that one, too. Don't care to go
there again. I'm going to tend my little plot and report what
results I get. C'est la vie beyond that for me.

>grade wages as well).

I think they just abolished his position, after an out-of-town outfit bought the station(s) he was working for. All the stations now are owned by a "group" and have staff, salespeople and even on-air personalities shared among them. It's really bizarre to me.

>I used to be the chief engineer of WWHG, a 5000 watt
>AM-FM station. As he has discovered, as one door shuts,
>another opens. So, now that many establishments have
>their lower priced spread, one can act as a consultant since

I think this is what he is doing, some of the time, and he is probaby making pretty good money right now. But he is not truly happy with it all, I don't believe.

>Perhaps he has seen the article on eme on 24 GHz with
>85 watts? Then again, maybe not. Certainly the standards
>have been lowered all over in an attempt to reduce wages

>spin, this time with some technical articles of what amateurs
>(at least the ones with a little giddyap-and-go) are doing.

I am going to try to use radio astronomy as the hook to keep things going, and ask for his help from time to time with different things. I want to do a bunch of public demonstrations, which he likes to participate in, and maybe that will help.
I may have been a Ham for only a few weeks but I have been

recruiting for a quarter century. THAT I DO know how to do!

Search on the correct spelling (Tektronix) and you'll likely have better luck. Besides eBay, have a look at the manual resources listed at http://www.reprise.com/host/tektronix/home/default.asp. This is not a particularly rare bird, so it shouldn't be too tough to come up with a manual for it.

Interesting. Amateur *has* been transmuted by marketing forces into
something other than what it actually means. To be an "amateur" is quite
a compliment actually. It's kind of like mediocre, which means average,
but has been transmuted into poor. thank heavens for marketing forces,
which make Amateur radio, astronomy, etc into a bad thing, while at the
same time giving us "professional" toilet bowl cleaners!

Now that being said, it is fairly shallow to avoid something due to the name.

<some snippage>

> top-flight at what he is doing.

Interesting again! Around my parts, to be called a nerd is a compliment
(mostly) meaning a person who is exceedingly proficient in thier work,
often to the detriment of their social and personal life. The kind of
person who will stay at work all night to tweak the last little bit of
performance out of what they are doing.

I think what needs done is to share with him the different aspects of the ARS and see what he thinks. I'd certainly skip the political aspects of Ham radio, unless he thinks that is interesting. If he is interested, then okay. But if he doesn't want to become a ham, how are you gonna stop him? (apologies to Mr Berra)

Why, of course it is, Bill! Been there and done that hundreds of times, in a professional setting. But hey, this is amateur radio, and we're hams, and most of us with experience know that the best laid plans are likely to see all that snazzy hi-data rate gear stored somewhere where we happen to NOT be when the ship hits the sand. Thus, if I happen to have a little key in my pocket, and there is a HF rig available, and perchance an operator on the other end similarly qualified, guess what- We can communicate! *Without* a 56k circuit!

Amazing, isn't it?

The word 'amateur' is derived from the French and actually means "for the love of", which in the case of radio would mean that amateur radio operators love radio for its own sake.

Of course that leaves out the likes of Loose Lennie.

But of course you're right-it has been transmuted into a entirely different meaning by those who don't know. Vale's friend might benefit from being informed of the correct definition, as it appears he loves radio.

While ARRL did show positive total results for the years
he's talking about, it was all from realized gains on securities
transactions. When you exclude those and consider the drop
in the value of their securities, unfortunately ARRL had losses
from operations in those years. KR4UQ seems to have some
sort of ax to grind and, like any good Unabasher,
will interpret the numbers to fit his argument.

He also seems to lack an understanding of the difference
between the 501c(3) side of the house and the for-profit side.

The negative connotation with "amateur" is a problem, no doubt,
and there may not be any real answer for it, at the higher levels.
Both "amateur astronomy" and "amateur radio" started early in
this century on the East Coast, at a time when there was very
little in the way of commercial product and everybody made
everything themselves, more or less. No one was worried
about what was going to happen down the road because, well,
they were too busy doing other things. Now, with "progress,"
we have commercial product, organization, turf to defend . . all
the wonderful accoutrements of modernity. And, with the end
of the Baby Boomers in sight, we have to worry about the
future and the numbers. Troubles never end!

>Now that being said, it is fairly shallow to avoid something
>due to the name.

I don't view it that way. It's an objection to be overcome and if
you don't take it seriously and instead denigrate the "customer,"
for having the objection, well, guess what.

> Interesting again! Around my parts, to be called a nerd is a

My view on recruiting is that when anyone shows ANY interest
at all, especially someone who has value, you pick up on that
and see what you can do. What most people respond to is
YOUR positive attitude toward THEM and not, immmediately,
to the thing you're recruiting for. So, I try to communicate some-
thing like "Hey, that's interesting about you. Do you mess with this
radio stuff for fun? I've got this project that . . ."

And then you hope for the best!

To me it is like Nike sneakers or more what some people may think if you *don't* wear them. I'm in the hobby because I enjoy it, not because someone may think it is cool or something.

I'd still be doing this no matter what they called it.

And it isn't as black and white as me denigrating someone. If I were to think of reasons to avoid a hobby, the name is near the bottom of the list of reasons to avoid it. I'm suspicious of his reasons right from the start.

I guess if the activities we do isn't interesting to him, it will be hard to get him interested.

I notice that you have mostly centered on the more technical portions of the hobby. Don't forget to mention public service work to him also. Our public service season has just started up, and I enjoy working this aspect of the hobby. It gets me out into the fresh air, the charities are grateful to us for the help, and there is the occasional emergency when we prove our worth.

Where in Bob's remarks did you find any of that nonsense? Or mine either, for
that matter. I don't force anything on anybody, you are the meister at that. WRT
ham radio rules, it's the FCC. So crawl back under your rock.

>>
>I'm beginning to think that the whole APC requirement for the "experimental
>farm" is unnecessary regulation.

I also think the APC requirement just gets in the way.

First it presupposes the application. APC is straight forward when
two transceivers are maintaining a bi-directional point-to-point
relationship (and if you have built the hardware for automatic
control of transmitter power), but gets a lot harder if you have one
transmitter and many receivers and is impossible if some of the receivers
are silent. Demanding APC for higher power hence means that only
bi-directional point-to-point applications get to use higher power,
and condemns multipoint and silent receiver applications to lower power.
I don't know why one would want to penalize the latter type of applications,
these could be the ones that turn out to be interesting.

Second, while APC is possible for point-to-point applications it is
still a fiddly protocol and hardware thing which, in real life, usually
gets left until the end of the development process. While APC is useful
for allowing working applications to scale to many users, it is a
complexity that just gets in the way when you are trying to get the
application to work in the first place, which is what most of the

development process involves. If the point of amateur radio is to allow development of new things, rather than just the deployment of someone else's finished product, I think this is the last place you want an APC constraint.

Finally, I know fairly simple APC algorithms work okay at VHF and above where the channels have relatively benign characteristics, but at HF where the channels are awful, propagation can change quickly, data rates are low and communication turn-around times are long, it may be that finding APC algorithms that work stably and well is itself a development project waiting to be done. I don't think it would be good to burden all higher-power applications with the requirement to do this development work in addition to everything else necessary to do something new.

APC is good for production systems intended to scale to many users, but is rotten for one-off experiments that individuals construct in their basements. I hence think a hard requirement for APC is probably incompatible with the kind of applications it is desireable for the ARS to support.

Note that I said his "reasons" here, Val. Not suspicious of *him*.
There is a huge difference!

What could a possible reason be that a person says that they are
interested, but aren't going to get involved because of the name of a hobby?

Perhaps they really aren't all that interested after all. I know I've
been guilty of having blind spots in the past. I've been super
enthusiastic about something, and not been able to see that others may
not have been so excited as myself.

Dennis,

I think you have just made the case why APC _* should*_ be part of these "pioneer" bands. You have identified a problem which begs for some tinkering and experimenting. Who better than us to take that bull by the horns?

You know, it's real easy to understand how some threads get so mangled
and abusive.

An amateur radio station is licensed by the FCC. Current RACES
stations are licensed by the FCC. Currently, FEMA
guidelines/regulations require that the RACES Officer be a General
class or higher Amateur Radio Operator, which brings them into
compliance with FCC rules about appropriately licensed control
operators. There may very well be RACES stations without an Amateur
RACES Officer, reflecting some earlier thinking on the part of the FCC
and FEMA -- I don't know. All of the hams I know who are a part of
RACES cooperative between ARS and a civil agency report that the RACES
Officer is the official control operator of the RACES station, a
General or higher class ham.

> >Further, the "RACES station" as defined by the FEMA and referenced by

> That's what the FCC effectively said when they issued RACES station licenses.

I lost the antecedent to "That's." As I read the FCC and FEMA rules,
it seems that the FCC was issuing the license to the "cooperative," in
the name of the civil agency.

Could it be that the FCC has decided to stop issuing RACES station
licenses for the very reason that some civil agencies are operating
those amateur stations without a licensed control operator? Could it
be that some ARS groups don't have a General/Advanced/Extra acceptable
to the civil agency? Could it be that in some areas cooperation
between the agencies and ARS have broken down? Could anything like
that happen?

>
> How FEMA defines RACES and how the FCC defines RACES don't necessarily match.

I think current FEMA regulations and FCC rules do match. It is past
practice that was out of joint.

I'll stick by the above. The last sentence says "...there could
be ARES. If ARES is not an official organization with national and
local memoranda of understanding with non-governmental agencies, such
as the Red Cross and the Salvation Army -- then so be it. ARES is a
delusion.

That was explained by inference. The transmitter was located
at an oil refinery which was still running. I deduce from that
that there was a diesel generator somewhere, probably fed from
the refinery's product, that kept the automation up. I wonder
how long it would take a couple-megawatt, power-generation
station to go through 100 million gallons of diesel fuel?

Of course the *real* irony would have been to have the
transmitter running off of the output of an automated
nuclear power plant. But then, they wouldn't have had
a window open with a shade in it and a Coke bottle on
the desk and .....

I thought we were working on our recovery from the decades-
long GOOD IDEA that amateur radio operators _* should*_
be proficient in Morse code operation and that proficiency
* should* be incorporated into FCC regs and ITU treaties.

Beware of government regulators with GOOD IDEAS in their
heads and the words _* should*_ and Mandatory on their lips!

The amateur bands exist because it is considered in the public interest for several reasons. None of those reasons have anything to do with having a place for 60-year-old geezers to yak about their lumbago. I think it is time for the Commission to turn up the wick on the hams promise to "advance the art".

With all kind wishes,

I think that Riley has done a lot of good with enforcement, especially in light of no enforcement prior to that. But I've read some of his notices and it sounds like he shoots from the hip on occassion. Nothing wrong with that when he catches it early and corrects it.

I refuse your demand. Darn, there goes my credibility. Now the FCC will reject my comments.

> >> > The FCC is not issuing any more Novice or Tech+ licenses.

>
> Yup.

So in the 1960's when people were actually applying for those licenses, the FCC not only administered the exam, but did all that paperwork. But in 1999, all they had to do was the occassional new applicant and a few more renewals. But you say that is just too much work.

Just how long did you work at the FCC to know all this?

> >> >> The ARRL BoD proposed instant upgrading of all existing Novices and

exams
> either.

Jim, after the FCC gives me the go ahead to operate 1,500 watts at one
frequency, just how many more written exams will satisfy the FCC that I can
operate safely 1khz lower in frequency?

Bad question. Instead, just what will it take to satisfy N2EY? Because
that's what's really going on here.

> >Their might actually be some rationale for "by mode."
>
> Thee is.

What mode exam did the Technician take to be able to operate CW on 144.010
Mhz?

Now, now, Mike. There you go climbing a Missouri Molehill again.
It ain't no Everest he piled up. :-)

I don't think you can love radio for its own sake. My little Icom doesn't
have any sake spigot on it even though it was made in Japan. The
best sake comes from a little bottle. Lachaim!

You speak French, Dickie? :-)

The DERIVATION of the word "amateur" is from the Latin "amare"
which means "to love." [see also modern Italian and "amore" which
is closer to the Latin]

The inference seems to be your own about "love." My dictionary has
two meanings: 1. a nonprofessional, engaged in an activity not for
money; 2. one who is somewhat unskilled.

Nearly all the radio services in Title 47 CFR are commercial in
nature. The FCC had to use some descriptor for non-commercial
radio services and it chose "amateur" as in "not for pecuniary
reasons (no money for services of communications)."

>Of course that leaves out the likes of Loose Lennie.

Why, Dickie?

Is it because I gave up a nice career start as a professional
illustrator to go into radio-electronics and successfully completed
a career in that? Why would someone go into a relative unknown
work area when they were already gifted with a different aptitude?

Or aren't you just commenting the way you do because you are
just pissed over not being able to win any convincing arguments
about a hobby activity that you, personally, see as something
glorious, profound, noble, good, and true? :-)

>But of course you're right-it has been transmuted into a entirely different
>meaning by
>those who don't know. Vale's friend might benefit from being informed of the
>correct

Valentine's friend might try writing the Rosicrucians for the
revelations. They used to advertise in many magazines for
folks to contact them for all the "secrets to everything" and
general enlightenment. :-)

Illiterate? Write for free help!

2479. Re: The ARRL's Federal Tax Statements in .PDF (?)

...and, the ARRL is true-blue, noble, kind, generous, above
reproach, etc., etc.

:-)

I don't know if those returns are real or not, but judging from the
stampings and other marks, they appear to be okay.

For FY2000, the ARRL has 17 employees making over $50,000
per year (Jon Bloom reported as getting just a bit over $70,000).
Booth, Freret, Imlay billed the ARRL for $105,122 worth of legal
thingies and $60,060 was billed from Chwat & Co. for lobbying
the gubmint. Executive VP Dave Sumner is shown as receiving
$124,875.20 in compensation plus $6,610.97 in employee
benefit contributions and an expense account of almost $7K.
[your membership dollars at work]

With 111 total employees and $11.6 million in reported total
revenue received, we are talking real money flow.

>He also seems to lack an understanding of the difference
>between the 501c(3) side of the house and the for-profit side.

Well, I'm sure you can look down from Mt. Olympus and inform
us ordinary folk just EXACTLY how it all hangs...or you can put
yourself on a pedastel higher than the gods of accounting to say
little and just sneer at those who dare challenge Big Brother. :-)

Fair enough Jim,

We'll let the geezers with lumbago keep 95% for earthquake preparedness, and
we'll turn over 5% of the bands below 222MHz to pioneers to tinker with
something new and exciting for *this* century.

With all kind wishes,

de Hans, K0HB

Jesus is possible because of the death penalty. He was put to death via
crucificion. Jim won't let me play "what if..." so we'll leave it there.

Not necesssarily ... there are ways to deal with such things.

However, since a CW carrier is the "best" jammer, that could
be one of the reasons Hans suggested that CW not be allowed
there ...
(Note: I am still NOT advocating a restriction, in the rules, on CW)

> But in that same 25 kHz bandwidth, at least fifty 12 wpm CW/Morse signals

And VFO (synthesizer) phase noise was REALLY good, etc., etc.

And, using the digital systems proposed in strawman form independently
by Gary Coffman and myself more than 2 years ago, hundreds of digital
signals at 20 wpm Morse equivalent transfer rates could coexist there ...

Hansl:

I totally agree. I think that the FCC rules should be changed to require mode-specific activity logs from each licensed amateur radio station, and that they should reflect at least one half of the total activity being in some mode other than AM/FM/SSB voice. Any digital mode or CW would suffice. It is a known fact that amateurs who are actively involved in modes other than voice modes are more likely to be technically involved radio amateurs.

Cecil:

Incorrect. It is/was "a control and an ego issue" only to the weak-minded,
impatient, lazy whiners who were/are too lazy to learn and be tested on
a practical communications skill at a useful proficiency level. To the rest
of us, it was a matter of supporting the concept of retaining the requirement
in order to retain the basic, essential communications capability that
amateurs can exploit when they know how to employ the Morse/CW mode.

Brian:

Funny you should ask. I basically learned how to send CW by using an Iambic keyer. I practiced off-the-air with it extensively, and as a result, have trained my ear to produce perfectly formed CW characters even when using my trusty old WWII-vintage Lionel J-38 straight key. I love to "send" to my TNC and watch the characters form perfectly on my computer screen! I just wish more of my fellow CW operators used keyers on-the-air.

>> Nope. You -to a T. That is, after Kim.

Kim who?

>It is not I who draws my self esteem from my Morse code ability. It is not
>I who wants to force my favorite mode requirement upon all HF hams.

Cecil:

For whom is Morse code their "favorite" mode? It certainly isn't mine.
I do enjoy Morse/CW, but my all-around favorite mode is good, ole-
fashion' Baudot RTTY, especially on a good day with a wide-open
band and strong, virtually error-free signals. AMTOR would be my
next favorite choice, but there are very few hams out there using it
for keyboard-to-keyboard QSO's. On a good day, I can copy 20
WPM CW with no problem, and can copy call signs and contest
exchanges at up to 30 WPM during Field Day. But 20 WPM
average copying ability is dismally poor in comparison to the
standards set by military and commercial CW operators. You
couldn't get out of Air Force Morse Operator school if you only
copy 20 WPM. However, 20 WPM, as slow as it is, was a perfectly
reasonable and highly achievable standard for an Extra class
license in the AMATEUR Radio Service. Nobody here wanted to
"force" this requirement on other hams, since it is a requirement
which was proven to be readily achievable by prospective hams of
all ages, both sexes, and from all walks of life. The only reason it
was done away with is because today's hams are interested only
in the most consumer-oriented, instantly-gratifying mode available
to hams: HF phone.

Nobody wants to have the truth told about them when, in reality,
all they are as a ham is a dumbed-down glorified CB'er. Unfortunately,
this is about all we'll have left in the ARS pretty soon. With my
marginal 20 WPM (average) CW ability, it will be no problem for
me to maintain my "self esteem" among future hams. However,
without a requirement to learn and be tested in Morse/CW at a
useful proficiency level, the future hams will have no way to develop
any self-esteem of their own, when all they are doing, for the most
part, is shouting each other down on the HF phone bands.

Agreed ... the phone bands would be OK of folks acted more civily.

Last weekend I tried to work the SETI League QSO party, just
for fun and to talk to other folks interested in SETI.

Started calling "CQ SETI" at the start of the 24 hour window
on 14.204 (1% of the H line freq) ... and worked a few
stations over the course of about a half an hour. All of a sudden
some inconsiderate LIDs in/around the Orlando, FL area came
up 40 db over S9, 700 Hz above me at 14.204.7 ... and start
shooting the breeze. No "Is the frequency in use?" or nothing.

I politely said "The frequency is in use." and signed my call
a couple of times and they simply ignored me ...

The LIDs were W4RHE, KF4IC, and K1RON ...

Now I would give them the benefit of the doubt that
they might not have been able to hear me, but they were
all 30-40 dB over S9 and while I'm not running legal limt
and a beam, my station is not THAT bad, either ... there
is no doubt in my mind that they could hear me and simply
didn't give a damn.

To make them even bigger lids, they were talking more or less
"local" on 20m and obviously using very high power (bragging
about their amps and big towers/beams) ... these guys could
use an APC requirement.

>is 0 encoding.
>
Interesting.

It's also probably not worth mentioning that only about 10% of commercial fixed point-to-point telecom goes by satellite or other radiated-RF means today. And the percentage is dropping.

The real communications revolution of the past 20 years has been fiber optics. Both the internet and lowcost long distance telephones are largely made possible by the fiber revolution. Fiber optics offer enormous bandwidth, low time delay, high reliability and security. Fiber is also almost immune to RFI, EMI and EMP. Fibers can be installed anywhere copper cables can go - on poles, underground, and under the sea. Terrestrial microwave and satellites simply cannot compete except in special situations.

From a historical point of view, we have come full circle.

The first telecom revolution was the widespread acceptance of the electric telegraph about 150 years ago. Before then, almost all information travelled only as fast as transportation could carry a messenger or a letter. Communications facilities available to President Andrew Jackson had more in common with those available to Julius Casear than they did with those available to President Abraham Lincoln.

The telegraph conquered most of the land area in Western developed countries, then proceeded to cross the oceans. Radio was hampered in its early development because it was at first considered merely a telegraph system without wires. It took years to get the term "radio" accepted universally instead of "wireless telegraphy" or simply "wireless".

Yet everything old is new again. Fiber optics has more in common with the telegraph than with radio. Many fibers follow railroad rights-of-way, just as the telegraph did. As Dennis points out, the signaling method used on the fibers is on-off keying.

And the companies selling us new radio technology call it "wireless" as if it's a new term.

--

Doing techno-prediction is a risky game, but if current trends continue, RF's communications role will change drastically in the years to come. Cheap and universal fiber communication will replace RF in all but mobile/portable applications and specialties like the military, hams and the developing world.

Just my opinion.

I have never met either Mr. Cross or Mr. Stevenson.

I have read much of what Mr. Stevenson has written here over the past 5 years.

I don't think Mr. Stevenson would behave the same way in an exparte or other official communication with the FCC as he has sometimes behaved here.

I would be very surprised if Mr. Cross read rec.radio.amateur.policy

Just some observations.

Let's do some approximate numbers....

Let's say they have a 2 megawatt backup diesel plant. Such a setup might
consist of a single 3000 hp prime mover turning an alternator at 900 rpm.
Depending on the load, such a setup might use 1-2 gallons per hour upwards.

Say they left a lot of lights and other stuff running, and the plant is using
10 gallons per hour. It would take 100,000 hours, or more than 11 years, to go
through 1 million gallons at that rate. The prime mover would probably fail
from lack of lube oil in less than that time. However, such a plant could
easily run for several months with no attention.

>Of course the *real* irony would have been to have the
>transmitter running off of the output of an automated

Dick,

Your problem is that your imagination is always bounded
by the limits of human ability to do thing manually.

You don't see capable of grasping the concept that there
could be other uses for that higher bandwidth.

Nor do you seem capable of grasping the concept that
being able to "burst" data at higher rates than it is generated
at allows more than one station to time-share a channel.

It is really sad at how limited your imagination is ... it
must REALLY SUCK to be stuck in your limited world.
(But I imagine your myopia provides you a degree of
protection in that you can't see far enough beyond your
nose to even begin to realize just how pitifully limited your
world IS.)

The key word is "preparation." Either you do it, or not.

> Thus, if I happen to have a little key in my pocket, and
> there is a HF rig available, and perchance an operator on the other end
> similarly qualified, guess what- We can communicate! *Without* a 56k
circuit!
>
> Amazing, isn't it?

It's amazing that you think preparation doesn't cover 99.9% of the
incidents. What you want/expect is for EVERY HF ham to
learn a mode just in case YOU happen to be unprepared to
the point that you need to communicate but have no other
means but morse.

IF you and others want to voluntarily maintain a morse
knowledge then just do it. What I oppose is your demand
that ALL hams must take that same path...just to be a ham on HF.

Cheers,
Bill K2UNK

Ed, is it possible for Larry to produce -perfectly- formed Morse characters
with a WWII vintage Lionel J-38 straight key?

Please put his signal on a recording scope and examine it.

> I love to "send" to my TNC and watch the characters form perfectly

Why? If you can produce perfect Morse with a clunky J-38, they should be
able to do so as well.

Most people do ... why SHOULD we sit around waiting
for a picture to Slowwwwwly appear when technology is
available to make it snap onto the screen NOW?

But I guess that your viewpoint shouldn't surprise me,
since you seem to prefer doing things the slowest, hardest
way possible ... my preference is to work smart, not hard,
you seem to prefer the opposite way ... one could possibly
infer from that that you're strong, but dumb??? :-)

> Seems to me like dedication of resources
> far beyond any rational need, at least in this era.

> capability of the Internet on ham radio. I don't think
> that's technically feasable.

See ... you can't even begin to conceive of what's possible.

That's your fundamental problem, Dick ... you can't conceive
of what's possible with today's technology (your inability to
grasp the value of a 56k circuit ...), let alone what will be
possible in the near future with a little applied creativity
(hint ... we're doing 54 Megabits/second in channels spaced
20 MHz on centers NOW ... yes, up in the higher UHF bands
where more spectrum is available, not at HF ... but it IS well
within the reach of hams and we could also do much better on
HF than what's common now ..)

WHEN have you said anything like that, Dick? You're the one who's
always saying, in effect, "Don't need any improvements in technology."

Just today, you claimed that it was "unnecessary and irrational" to
prefer a 56k circuit for receiving a picture, compared to something
else (which you implied would be much slower).

Dick apparently subscribes to the "The FCC is setting us up to fail,
so that they can auction our bands off to commercial interests."
conspiracy theory. The funny part is that the other part of that theory
is that those of us who want to eliminate Morse testing and modernize
ham radio rules to permit, encourage, and promote more modern
technologies are somehow "co-conspirators" in this fantasy conspiracy.

ROTFLMAO!

The time delay for fibre (i.e. speed of light in the fibre)
isn't any better (actually its worse) than RF in space or cable.
The advantage of less delay is only in comparison to
satellite connections which include 50,000 miles of space propogation vs
perhaps only 10,000 miles of terrestial connectivity.

Wireless is relatively new to the current "end user" of the service. We
have
actually flipped the use of RF vs hard wiring (fibre). In the past,
wireless (radio) was depended on for long distance and everything local was
wired. Today, wireless is a huge growth area with the "wireless" involving
the connection from user (i.e. cellphone) to a base unit and
the rest of the connectivity is then all "hard wired" via fibre.

Jim,

Good overview. I injected a couple of things above for clarity.

Cheers,
Bill K2UNK

I agree with Hans ... this is an area where hams could potentially
truly contribute to the state of the art ...

Right on Hans! Take the geezers and hold their feet to the fire :-)

I'm up to the challenge ... too bad Dick and so many others can't
see the value in it.

You're welcome. It's an everyday thing on VHF-FM. What's sad is that
I wrote all of that and it was immediately misinterpreted even after I
listed numerous examples.

Oh well...I tried.

And a good one it be. In fact fiber development parallels telegraphy development so closely as to be almost eerie; same basic engineering problems, power, repeaters, multiple channels. You are, of course, aware that Sprint was Southern Pacific Railroad INTernal communications before bypassing the telco was legal. St. Louis in my years there was the end of Sprint and the beginning of MCI which was originally STL to Chi so we were the only place to be able to call coast to coast without Ma Bell. How things have changed.

Actually, you overstate my case, Carl. I've no problem with geezers and lumbago nets. I'll be a geezer someday and CKB will have no recreational use for me.

Rather than hold the geezers "feet to the fire", all I'm asking for is a small "park" free of geezers, so the pioneers can "exuberantly play radio in the ether" to steal a quote from K1ZZ.

Larry, it is abundantly apparent that the basic problem was equating Morse code skill with knowledge of electronics. It is abundantly apparent that they are not equal and attempting to equate them was a gross perversion from which the ARS may never recover.

Egads Larry, do you believe that Albert Einstein had no self esteem
because he didn't know Morse code? Do you believe that George Bush
has no self esteem because he doesn't know Morse code? When are you
going to wake up to the real world? Ham radio is a minor part of
any mentally healthy person's life and Morse code is a minor part
of ham radio.

one.

You mean us guys who passed the same written test as Generals
but didn't get privs because we only copied 5 wpm and not 13?

There was no "freebie" in granting Generals to "old techs" once
the code requirement dropped to 5 wpm ...

NCI and the NCVECs both told the FCC "No freebies",
it was the ARRL who wanted to give freebies (presumably
to make some folks feel grateful in hopes they'd sent in their
subscription, er membership, $$$)

> >Just stop the divisions and segregation in the band.
>
> Which means what? No more subbands by license class? No more subbands by
mode?

I could live without subbands by license class ... that is the norm
in most of the world and doesn't seem to really cause any demonstrable
problems.

While most of the world seems to do just fine without subband by mode
restrictions, I'm not so sure that we Americans are ready for that. Just
listening to the behavior that I hear from so many on the phone bands
(and I mean people who passed fast code tests, not some new thing
that's happened since the test was dropped to 5 wpm), I don't really
want to see that "Ugly American" phenomenon spread to the entirety
of the bands at the expense of all of the other modes and the digital
techniques that are our future.

> >Instead you now have a dead license class because of a dead idea.

Reducing the number of license classes need not result in a wake ...
we didn't NEED 6 classes of license in the first place ... the loss

of Tech+ is no cause for mourning ... those folks still have the
same privs (or have already upraded) ... that there will be no more
Novices or Advanceds issues is not a loss either ...

playing
> field". It was not always that way. Dumb rule, actually.

Actually, the rule was put there to keep higher class lids from
simply stomping the novices into the dust with their CA kilowatts
and making the band essentially unusable for novices.

And, since high power isn't really NECESSARY, it's not a bad idea
in that sense either ... I frankly wouldn't care if they dropped the power
limit for ALL of our bands to 100-250 Watts ... as I've said before, there's
much more to be gained with better modulation and coding schemes and
better antennas than with the 10 dB or so difference from the typical
"barefoot" HF rig and the legal limit ...

>is no doubt in my mind that they could hear me and simply
>didn't give a damn.

Lessee, if you're running 100 W and a vertical and they have 1500 W and 20 db
of effective antenna gain (!!) you might be 35-40 dB below them - max. So you
would be S9 there, worst-case.

However, consider this:

If they were 40 over to you, they might be 60 or more dB over to each other. With slow AGC they might not hear an S9 signal.

But that doesn't excuse not listening first, nor doing the "frequency in use?" thing. Nor the fact they could have dropped power 20 dB and been blowing each other's rigs off the desk.

More reasons I'm mostly on CW. A simple "didit...dit" and anybody on frequency will pipe up.

>To make them even bigger lids, they were talking more or less
>"local" on 20m and obviously using very high power (bragging
>about their amps and big towers/beams) ...

That's the biggest lidism, right there - use of the wrong band for the purpose. What time of day was this?

>these guys could
>use an APC requirement.

Nah. Just some common sense. Technology alone won't cure bad habits.

I don't encounter that sort of problem on 14.020.4

Damn ... thanks for telling me that, Len ... I'm going to have
to ask for a raise ... Dave's making almost as much as I do ...
but then again, he doesn't get stock options :-)

However, I find $7k unbelievable for Dave's expenses ...
considering he spent time in Istanbul for WRC-2000
(If I recall he came home for Dayton or something in
the middle of the WRC, then went back ...)

Thus, I can't believe $7k ... my last expense report (a few
trips to Washington last month and business class
airfare r/t to Sydney, Australia for the IEEE 802
meeting) was over $10k and that's just one ... I file
about one report a month so that AMEX gets paid often
enough to keep them happy ...

Now, to write myself a note about that raise ...

Carl - wk3c

Yes, Larrie, you tellum Macro Boy.

We all know you hate voice with a passion.

We all know you are one of the best 1930s radio amateurs to
exist in the year 2002...except you seem to be a total technical
moron on how anything but on-off keying works.

Now go hock another loogie in your splatoo duties while
specializing your paratransit.

>possible by the fiber revolution. Fiber optics offer enormous bandwidth, low
>time delay, high reliability and security. Fiber is also almost immune to
>RFI, EMI and EMP. Fibers can be installed anywhere copper cables can go - on
>poles, underground, and under the sea. Terrestrial microwave and satellites
simply
>cannot compete except in special situations.

Some points not considered -

While the fiber itself is immune to known radiation threats, the
terminus of the fiber is NOT immune. There terminals of the
fiber circuit link are electronic and therefore require RFI, EMI,
EMP shielding (as needed). While military electronics is
designed to withstand EMP, very little of commercial terminal
electronics is so designed.

Optical fiber cables are as susceptible to physical damage in
their cable lay as copper-conductor cables.

"Optical pumping" of certain optical fiber material eliminates the
need for amplifiers to bring the normally-quite-lossy (by comparison
to copper) signal levels up above the noise. That is a distinct
advantage over copper-conductor circuits.

You CANNOT take advantage of long optical fiber circuits without
being able to digitize the signal to be sent. That means digital
electronics, high-speed A/D and D/A multiplexers, something
totally foreign to the analog-only OOK CW ham.

The typical throughput on the UK-through-Med-around-India-
around-SE Asia to Japan undersea optical fiber cable is 4 GBPS
in two circuits. That bit rate alone is twice as high as highest-
band ready-built off-the-shelf ham equipment.

>From a historical point of view, we have come full circle.

From already-known history of communications, you are going
around in circles. Some points -

>The first telecom revolution was the widespread acceptance of the electric
>telegraph about 150 years ago. Before then, almost all information travelled
>only as fast as transportation could carry a messenger or a letter.

No. OPTICAL semaphore systems were already in use in
Europe and the UK for about two centuries before. That was
on land. Various forms of flag and torch (night) were in use
ship-to-ship.

>Communications facilities available to President Andrew Jackson had more in
>common with those available to Julius Casear than they did with those
>available to President Abraham Lincoln.

Neither Julius Caesar nor Orange Julius was president of the
USA. Please try to confine your analogues to some common
geography.

>The telegraph conquered most of the land area in Western developed countries,
>then proceeded to cross the oceans. Radio was hampered in its early
>development because it was at first considered merely a telegraph system
>without wires.

Early radio WAS nothing more than "a telegraph system without
wires."

Early radio could ONLY communicate by on-off coding schemes.
Radio needed the vacuum tube to communicate an analog signal
that was not on-off.

The very early Fessenden "AM" experiment was with a rotary
VLF generator using a water-cooled microphone.

AM and even SSB were actually pioneered ON wire circuits.

>It took years to get the term "radio" accepted universally instead of
"wireless
>telegraphy" or simply "wireless".

Don't quibble over certain words which are geographic and
ethnocentric.

The first accepted radio communication occurred in 1896. The first US radio regulatory agency was created in 1912. That's a span of only 16 years for "acceptance." From essentially nothing to having a government agency regulating it is a quite rapid "acceptance."

>Yet everything old is new again. Fiber optics has more in common with the >telegraph than with radio.

Ignorant nonsense. At 4 GBPS bit rate, MANY THOUSANDS of separate communication circuits can coexist without interference. That includes ANY mode desired...simple POTS to already-time-multiplexed whatevers to video channels. Whatever mix is desired. No problem. The "telegraph" couldn't possibly come close to such throughput.

>Many fibers follow railroad rights-of-way, just as the telegraph did.

Sorry, wrong again. The optical fiber cable runs have the same physical characteristics as copper-conductor cable runs. MOST cable runs are underground or under water. Both types, optical or copper. In addition, both types can be elevated on poles or use terminal equipment to transfer signals to RF/microwave links for economically-infeasible geographic obstacles.

The old telegraph lines couldn't possibly be installed with as much physical versatility as optical fiber cable circuits.

>As Dennis points out, the signaling method used on the >fibers is on-off keying.

That was a slightly-sarcastic commentary on OOK.

Let's look at the circuit throughput at 4 GBPS on a single optical fiber run. Assume, for worst-case conditions, 20 bits for an analogue of any signal being sampled (that includes framing and synchronization). That allows a Nyquist-sample maximum of 200 MHz for the full bandwidth. That full bandwidth can be time-multiplexing of up to 30 video channels or 50 thousand POTS (Plain Old Telephone System) circuits.

The throughput of a modern optical fiber cable circuit is so much faster than plain old (very old) telegraphy that it shouldn't even be done by any thinking communicator-engineer.

>And the companies selling us new radio technology call it "wireless" as if >it's a new term.

It is, but you are just quibbling on old-fashioned word use. The present-day electronic industry use of WIRELESS is an outgrowth of applying short-range radio links to LANs (Local Area Networks). That resulted in the WLAN or Wireless Local Area Network. That also required some regulated EM spectrum allocation which, in turn, allowed such things as digital cordless telephones, and a great many different control and measuring appliances. The

"bluetooth" short-range radio control/measure/linkage system is a good example of modern electronics that is in the broad industry category of "wireless." There are three other "wireless" linkage standards vying for acceptance.

>Doing techno-prediction is a risky game, but if current trends continue, RF's
>communications role will change drastically in the years to come.

Why are you so behind the times?!?

ALREADY, at the end of last year, one in four US citizens was a subscriber to a cellular telephone. Hello? A cellphone is a little two-way radio that is tied into the telephone system. Is 80 MILLION cellphone subscriptions enough to indicate any revolution in personal communications?!? There are OVER 300 million cellphone subscribers in the world NOW.

The only "limitation" on geosynchronous communications satellites is the "space parking lot" is already, repeat ALREADY, full. In North America, there are no less than 56 commsats in geo-sync orbits visible to the 48 contiguous states, 58 commsats counting Alaska and Hawaii. Have you checked out the circuit capability of those birds? That was as of last summer (and the press run of the neat little Blonder-Tongue CATV reference book).

Have you felt any pulse of the microwave radio industry? I doubt it. It is going full-bore on NON-cellular-phone applications. If you do some cross-country driving you can SEE the dishes. You can also see all the antennas which are NOT amateur, not cellphone, used for all sorts of communications.

> Cheap and
>universal fiber communication will replace RF in all but mobile/portable
>applications and specialties like the military, hams and the developing
>world.
>
>Just my opinion.

Yes, we know. We also know that you aren't any Thomas White as historian of radio. We KNOW that you champion OOK CW on HF...and probably oil those old Greenlee chassis punches every year in hopes of reinventing radio with tubes and things.

Start reading some periodicals besides ham magazines. There's a whole world of RADIO out there that has developed, still developing, and no end in sight for either fiber or radio communications. Look and learn. Some of the techniques may be applicable to amateur radio.

>
>Yea, and we sent multiple signals at the same time using
>different "colors" (i.e. different optical wavelengths).

Errr...Bill, you were starting off with "my" quote and it was Dennis'
you are quoting. :-)

Present-day use of different optical wavelength is fairly well
limited to only two main spectral lines. One of them is the
"pump" energy that causes the amplification (increase in
optical signal) of the other wavelength. That's a quantum
physics effect that has no electronic analogue. It also means
that very long undersea fiber comm cables do not need any
repeater-amplifiers along the undersea (or underground) run.

So far, the ITU-R limits allocations at about 300 GHz. Anything
above that is free game. 200 THz is quite a bit above the 300
GHz allocation limit. :-)

At 4 GBPS rate, you can have over 30 video channels or 50,000
POTS circuits or any combination thereof (and other types) all
on that single "color" (main spectral line). The main limitation

is not the fiber run but the terminal equipment to sort out all those different signals.

Right now about 120 TV channels and 40 music-voice-only channels are coursing down an ordinary coax cable in my neighborhood over AT&T broadband service. A little "set-top" box does the tuning and decoding. Beautiful S/N, no snow, no noise all channels.

Yep, my world is sure a mess. Got a full privilege ham radio license at age 14, the Extra a few years later, been doing it *all* for so long I've forgotten a lot of it. Comes with the territory and longevity. Too bad you can't have some of that experience.

Oh, I should mention that your perfect system works FB in the lab, under controlled conditions where you get to pick what you want. Out in the real world where real-people hams live and don't just play

games they use what they find at hand when the instant need arises. That *might*, today, include a laptop computer to go with the HF rig they were fortunate enough to have in the car or wherever. On the other hand they might be lucky to have as much as a CW key to use. For sure the inventory of assets won't include any of your snazzy NASA or NSA style "burst" toys.

Live with the reality. Not that you'll ever accept it or like it. That's tough.

So you sit on your butt in New Jersey waiting for whatever to happen, all fat, dumb, happy and "prepared". Gee, Bill, lots of us get around to distant places. I DO most of the time carry a laptop computer with me nowdays, but sometimes even that is a little to much extra. But bottom line I'll have an HF rig, and something to KEY it with. Sorry you won't be able to copy my CW message if and when I need to send it!

Show us where you can get 56k data rates within any reasonable bandwidth on HF, much less within any rule the FCC might even feasibly write. You can't do it. You're full of hot air and SSB.

>
> That's your fundamental problem, Dick ... you can't conceive
> of what's possible with today's technology (your inability to
> grasp the value of a 56k circuit ...)

I'll say it again- a 56K circuit on any ham band is of very limited value under any conceivable circumstance. We can do all we will ever need to do with much less involvement.

You must have missed all the packet radio "store and forward" nonsense. Huge reams of data about nothing being sent nowhere, just to be able to say that "we could do it so we did it". What a joke. That crap clogged all the digipeaters and ruined the packet radio system as far as most of us were concerned, and ended widespread interest in the mode.

You don't show common sense enough to know that even on the internet the 56k circuits aren't al lthat fast, and it isn't the fault of the 56k hardware either. So you'll make that fly on HF radio? Not a chance. You're a wildeyed dreamer.

Well Buddy, I hate to bust your bubble but we DON'T "need" them! But you do
only SSB on ham radio, so you already know that!
Would we adopt some of them, and use them? Probably, after they passed muster,
the test of hams using them and finding them to be useful and attractive
additions to their activities.
Don't look now, but the landscape is littered with discarded "better ideas".
And if you think any significant numbers of hams are going to jump on the
bandwagon on the strength of your pronouncements, you better reconsider.

>

OF COURSE I realize what I said!!! And it is 100% accurate!!!
I should have realized it would be asking far too much of you to expect you to know any history of radio.

No conspiracy of any sort is -or ever was- needed nor necessary. Just read a bit of history on the allocations of frequency spectrum since the early days of radio. The trend is clear, and actually for anyone well versed in the radio industry there is really no doubt about it. What happened to you? Did you have a little deficiency in that area as well?

That's not what I got out of it. Quite the opposite, in fact. Some seem to have no idea how the HF bands actually work, and assume that anytime they hear someone using high power that he's "abusing" the minimum power rule. Some do, but as often as not high power is needed to complete the desired communication.

When you get lumbago maybe you can keep quiet about it then? (I thought you
were already a 60 year old geezere)

> I think it is
> time for the Commission to turn up the wick on the hams promise to "advance
> the art".

Ah, that wasn't a promise at all, just one of *several* bases and purposes
for the existence of ham radio. Only Carl and Cecil "promise". And then decline
to deliver.

> use an APC requirement.

I hope you know that on 20 meters the skip zone normally starts within a few miles. (If you had done much mobile work you'd know it) It's very much a possibility that they were far enough away from each other that they did need higher power to make the desired communication. And if you happened be positioned where you were off the side of their yagis which very easily could have all been pointed east and west, you were in a deep null, and it's very much a possibility or even a likelihood that they never heard any hint of your low powered signal. In the Orlando area there are almost certainly small lots and antenna size limitations, so it is entirely possibile they didn't have antennas for bands lower in frequency than 20 meters.

Yet you automatically brand them as "LIDS" with no knowledge, only your preconceived notions of their situations and what they were doing. You just heard them talk about amps and yagis and "ASS-UMED".

This is why the FCC virtually never attempts to enforce the rule on minimum power needed to complete the desired communication. Most of the time it is virtually impossible for anyone to determine with accuracy that the rule is actually being violated. But you try.

Human written code is full of personality, but the 1's are one, and the 0's
are zero, not 1 +/- .001 and 0 +/- .001 respectively.

So Larry sends perfect code?

Clear to you code haters. Not to anyone else. The qualifications were and are separate parts of the whole. The only people who ever complain about the code qualification are those who just didn't want the license badly enough to do it.

> It is abundantly apparent that they are not
> equal and attempting to equate them was a gross perversion from which the ARS may

This must be some kind of proof that you have more time in the chow hall.
Besides, the M28s were junked a quarter of a century ago. Even hams don't
want them anymore.

> You and Cecil are so damn stupid you are SURE that because I believe

Hans and Cecil,

I would grant that Larry sends pretty darned good code, based on his quasi-religious enthusiasm for the mode. Not 100% perfect in the purely technical sense, since, as humans, we are not capable of total perfection in such things, but quite good.

Larry's problem is not his ability to send good Morse, but his attitude towards those "knuckle-draggers" (his term, not mine) who don't exhibit his propensity towards the mode.

Clay,

Nothing jumps out at me from my recollection of Gary's proposal, or mine, that would likely be patentable ... there's the "obvious to anyone skilled in the art" aspect to patentability. That's part of the problem ... how they would work and the value of what Gary and I each proposed SHOULD have been obvious to many hams ... that that was NOT the case indicates that too many are NOT "skilled in the art." However, just because something may not be patentable, doesn't mean it's not "good stuff" with potentially high utility.

Frankly, I haven't done any development on that proposal ... first, I moved into a newly-constructed house and am still in the process of organizing the office, workshop, electronics lab, and ham shack. Second, the "We don't want no stinking, reliable digital systems, we LIKE to have to work hard to dig the weak ones out of the noise because we insist on using less capable methods." response here was, frankly so nauseatingly backward that it pushed that idea down the priority list a ways. Other things at higher speeds and higher frequencies have been more on my mind lately, but I still have an interest in more capable HF digital systems.

If he sends code that can be suitably copied by a computer, then it must be
pretty good.
```

other.
> With slow AGC they might not hear an S9 signal.

They were all in the Orlando area, using high power and high beams
on 20m to talk across town ... the guy who was strongest here (by a
barely perceptible margin) said he could see the antenna of one of
the others ...

The other problem was the "quick keying" without an opportunity for
anyone else to break in ... so the AGC might have had an effect as you
point out, but even with no AGC, they were so quick on the turn-around
that someone would have had a hard time breaking in most times.

> But that doesn't excuse not listening first, nor doing the "frequency in
use?"
> thing. Nor the fact they could have dropped power 20 dB and been blowing
each
> other's rigs off the desk.

Again, at least 2 of the stations can see each other's antennas ... so why
use
high power on 20m to talk across town when 2m simplex with a 5W HT
would probalby work just fine and not block an HF frequency over huge
areas of the earth??? To me, this is just bad practice (and probably a
violation of the minimum power rule) ... but what do I know, since I'm
an "Extra light" :-)

> >To make them even bigger lids, they were talking more or less
> >"local" on 20m and obviously using very high power (bragging
> >about their amps and big towers/beams) ...
>
> That's the biggest lidism, right there - use of the wrong band for the
purpose.
> What time of day was this?

0030Z

I heard one of them again today on 14.205 calling the group ...
same 40 over S9 ... gave him a call and he came right back to
me with a "good signal" report ... I discussed the incident of

last weekend with him and he professed that they didn't hear me. Maybe their extreme signal strengths to each other, combined with AGC and quick-keying did cause them to not hear me ... but, yes, using high power on 20m to talk across town is bad practice. I tried to diplomatically hint at that by asking why and the response was "Habit."

However, they did apologize and indicated that in the future they would listen a bit more and would certainly be willing to QSY a bit from their "normal" frequency for other stations already working close by ...

Dick,

Using high power on 20m to talk across town (expecially when you can
actually SEE the antenna of at least one of the other stations), is simply
BAD PRACTICE ... such communications can and should be conducted
on something like 2m simplex, rather than blasting an HF band with
world-wide propagation with little regard for your effects on others.

You can try to excuse the behavior all you want because you dislike
the complaintant (me), but that doesn't change the fact that the behavior
is bad practice. Even an "Extra light" like me knows better.

> if he wants to keep up on things in many different ways.

TO THE BEST OF MY KNOWLEDGE, Bill does NOT read r.r.a.p.

First, usenet has a (bad) reputation. *We* argue points here for the sake
of discussion (and perhaps to win converts to our point of view from the
nearly constant flow of newcomers)

Second, Bill is tasked with occasionally making determinations of what
best serves the public interest and the Commission's public policy goals
and legitimate regulatory interests. If it's not in the public record
(comments, etc. filed with the FCC), it simply doesn't count for anything.
(So why would he waste his valuable time reading things
that he can't legally or ethically consider in forming FCC rules?)

And again, the idea that Bill would be "afraid" that I might call him
a "Luddite" is perhaps the funniest thing I've heard in years.

Once again, Dick, you have no way of knowing what I do (or don't do)
on ham radio, nor what I may be working on "in the lab."

So your assertion is that ham radio, must, of necessity always be grossly
limited and backward compared to "the real world." Yes, I've seen
you express that view on many occasions.

> > > > Ham radio has value without new technologies, but if it had adopted
your

While I'm not a nostalgia/history buff like Jim, I'm not totally ignorant of
the
history of amateur radio, either (and I am a member of QCWA) ... but the
point is STILL that YOUare asserting that "in the early days we needed
technical improvement, but today is a different situation entirely."

EXCUSE ME, but we STILL need technical improvement ... it's one of
our reasons for being ... and being satisfied with things that were novel
50 years (or much more) ago is NOT the way one "advances the radio art"
or "maintains a pool of (competent, useful) trained technicians and
electronics
experts."

Sorry, Dick ... you are incurably clueless.

That's rich, Dick. As a Libertarian, I advocate as little control of
government over citizens as is feasible. You OTOH, advocate a governmental
control program for Morse code.

Then those who are developing the new modes won't use 1500 W.

>Give the "brute force" boys an inch and they'll use both of them ... we want
>and need to concentrate on "elegant" not "brute force."

Sure. But the way to do that is not to force it on people.

Dennis Ferguson's excellent posts have convinced me that there is no need for
an APC rule in the "experimental farm" idea. Your experiences on 14.204
confirmed that conviction.

The proof is in the doing. The developers of PSK31 did not need high power to
develop that mode. They did not need APC rules or a low power subband, either.
All they DID need was some flexibility and encouragement. That's what the
"experimental farm" is all about.

If you want APC rules, put that part in your comments to the FCC. I'm not going
to. I think it's unnecessary.

Yep. I was one of them in 1968.
>
>There was no "freebie" in granting Generals to "old techs" once
>the code requirement dropped to 5 wpm ...

Noboy said "freebie". Allow me to clarify.

All pre-March-21-1987 Tech Pluses, and those with unexpired CSCEs for old
Element 3B, have passed the necessary tests for a post-restructuring General.
It should have been a nobrainer for the FCC to do one or more of the following:

- allow those Tech Pluses to have General privileges if they have old license
documents to show they qualify
- allow those Tech Pluses to renew as Generals when the time comes or as part
of a vanity call application
- allow those Tech Pluses to upgrade by mail or online by sending in the
appropriate forms and documents
- have the FCC computer issue new Generals to all existing Tech Pluses who
qualified

All of these were suggested to the FCC. Yet the FCC insisted that all
qualifying Tech Pluses show up at VE sessions and pay a VE fee to get a license
they'd earned years before. Why?

>NCI and the NCVECs both told the FCC "No freebies",

Allowing the Tech Pluses listed above to get Generals without the VE session
hassle isn't a freebie.

>it was the ARRL who wanted to give freebies (presumably
>to make some folks feel grateful in hopes they'd sent in their
>subscription, er membership, $$$)

You mean the upgrading of existing Novices and Tech Pluses to General.

Your comments show an anti-ARRL bias that has no basis in fact. What would you
say to someone who claimed that the NCVEC and NCI stance was driven by a desire
to make existing hams "jump through a hazing hoop" of written exams, and gather
more $$$ at VE sessions, while protecting their status as having passed the old
writtens? ;-)

The ARRL idea of instant upgrades for existing Novices and post-1987 Tech Pluses was well-intentioned but would have produced some unpleasant consequences. Post-restructuring new hams and existing Techs would have complained (quite rightly!) about how those getting the upgrades bypassed one or two written tests. And because of the necesary delay between the R&O and its effective date, there would have been a rush to get a Novice or Tech Plus while the "sale" was on.

On the $$$ issue, ARRL's upgrade idea would have cost ARRL money, in the form of lesser sales of manuals to study for the license upgrades.

>want to see that "Ugly American" phenomenon spread to the entirety
>of the bands at the expense of all of the other modes and the digital
>techniques that are our future.

You've just proved my point.

Note that ALL of the folks you hear on the HF 'phone bands have passed multiple WRITTEN tests. But even before the restructuring, there were medical waivers. One cannot assume that any HF ham has passed more than a 5 wpm code test without more information.
>
>> >Instead you now have a dead license class because of a dead idea.

>same privs (or have already upraded) ... that there will be no more
>Novices or Advanceds issues is not a loss either ...

The whole point of the instant upgrade thing was to clean out those unnecessary classes. FCC obviously thought that cleaning them out was unnecessary.

In less than eight years, even if no other rules changes take place, there will be no more Tech Pluses, because the FCC is renewing them as Techs. Novice totals are below 40,000 and dropping slowly - more slowly than may have been expected, due to lots of upgrades in the grace period.

>
>Actually, the rule was put there to keep higher class lids from
>simply stomping the novices into the dust with their CA kilowatts
>and making the band essentially unusable for novices.

Sure. Yet for the first half of the history of the Novice license, they had only 75 watts input while other hams had a kilowatt.

In my experience, non-Novices rarely if ever went into the Novice segments to work other non-Novices. They went there to work Novices. High power helped out the Novices, who often had less-than-ideal-receivers.
>
>And, since high power isn't really NECESSARY, it's not a bad idea

There are situations on amateur HF/MF where 1500 W is more than justified and other situations where 15 watts is more than enough. 1500 W can be necessary at times.

Better antennas are always a good idea but not practical for many if not most hams.

I still find it surreal that you lecture us on "better modulation and coding schemes", Carl. Wish I had a buck for each time I've read that one.

What mode do you use most on HF amateur radio? ;-)

You are correct, sir! I should have specified the comparison between
geosynchronous satellite link vs. fibre optic more clearly

And all comms through a geosynchronous satellite is subject to the 50,000 mile
delay, regardless of terrestrial distance covered.

In the USA, anyway. Just a matter of the marketing folks recycling an old term.

The results are often confounding, however, as some end users don;t realize
they are using radios when they use a cellphone or cordless phone.

>We have
>actually flipped the use of RF vs hard wiring (fibre). In the past,

Good point! The result is that most of the distance is covered by fiber and the
"last mile" by RF.

But even that is changing. How long before we see each home or business wired
("fibred"?) with its own direct optical connection to the infrastructure, with
the end user providing whatever terminal equipment is needed for voice
telephone, data, entertainment, etc.? One fibre will do all that and much more.

> exciting for *this* century.

Yeah, but you need the geezers with their lumbago (and
earthquake preparedness) to provide the *content* for
the new and exciting modes and systems. After all,
these new media will be unproven as to robustness under
conditions of lumbago discussion until sufficient
operating history is accumulated to provide confidence
in the reliability statistics out to at least the
3-sigma point. No, lumbago will have to be permitted
in that other 5% of the allocations so that any new mode
can be fully validated.

IF that's all there is to the situation, I certainly agree. My point is that you are doing exactly what you always do- make false assumptions with too little knowledge and information. If two of them could see each others antennas, the third could have been at the edge of the skip zone requiring all three to run higher power to complete the desired communication and the yagi scenario could easily apply.
And demanding they do it on some other band is lame. Remember, there is NO requirement for hams to own any particular station equipment whatever. Maybe one of them doesn't have a two meter station.
Such situations occur all the time on HF. No doubt many or even most are preventable, but which ones? FCC knows there's no practical way to determine.

Wrong. If it doesn't reside between his ears it doesn't count for anything. As
has been noted many times already, there is no obligation for FCC to
"consider" anything, or if it is considered, to give it any weight. That
decision is his to make, subject only to overrule should he make some really
blatant faux paux. In the regulatory environment of the day Political
Correctness gets at least as much consideration as any other factor. If you
don't believe that he knows all about that, dream on. He is after all a public
employee, and though the Commission is nominally "independent", you can be
sure that they WILL pay attention to the desires of the elected. One word from
some elected individual -for whatever reason- is enough to "make things
happen". The much demanded proof? Try the Medical Waivers.

Fear has nothing to do with it, and if you don't know what DOES, you're even dumber than you've shown yourself to be.

You seem to do a fair job of describing your "activities". And of avoiding any questions about them that wouldn't show you in the light your desire. Nuff said.

And if you really believe we desperately "need" your sky pie dream gear, kindly inform us all as to WHY and WHAT FOR. To please a couple people in DC?? yeah, right.

Again, give us a good description of the circumstances surrounding the need for hams to have instantly available a 56k instant graphics circuit on ham radio. To show disaster damage? You'd better get your butt on the scene FAST, the SKY-3 News chopper will have you scooped post haste. So I suppose we should all have broadcast quality video cameras and helicopters to fly them around with. Hey, gotta keep up with the "commercials", you know! Sounds to me like more sky pie.

Oh, it isn't a bad idea, just another of those "great" things that will come to very little, like Slow Scan TV. Sure, there's a few hams using it. It's never been much more than a novelty, of course. How many photos can one pass around before the novelty wears off?

> technical improvement, but today is a different situation entirely."
>

Read it again, this time for meaning, not to develop your prejudices. If you don't comprehend the vast differences between early radio and the equipment of today you're due some REAL education. The rig I first put on the air in the early spring of '57, crude as it was, was a few orders of magnitude better than the average beginners rig of the early years. The invention of the triode vacuum tube followed shortly by the development of the sensitive regenerative detector finally cured "coherer" receivers of their previous characteristic deafness. And what I have sitting on the desk now is just about that far ahead of the '57 rig. And it really doesn't need any help at all. So yes, indeed, the early days desperately needed all the improvement they could get, and today we really do

not. Hey, if it chaps your cheeks, learn to live with it, that's reality.

>
> EXCUSE ME, but we STILL need technical improvement ... it's one of
> our reasons for being ... and being satisfied with things that were novel
> 50 years (or much more) ago is NOT the way one "advances the radio art"
> or "maintains a pool of (competent, useful) trained technicians and
> electronics experts."

I never have said that improvement isn't a good thing, nor that newer, better modes won't be beneficial in the long run, all that is obvious. But this incessant demand that we DO something high tech, all the while handing out Extra class tickets on the strength of an "Extra in a Day" school just doesn't compute. If you can't find a serious conflict of purpose here you should take off the blinders.

>
>
> Sorry, Dick ... you are incurably clueless.
>

I don't need a clue, I have the solution. If you ever find your own clue let us know.

The company I work for sends multiple wavelengths
in the same fibre now. Our 400G product can have
40 different wavelengths (colors) each operating at
10Gig (10x40 = 400G). That product is several years old and
is able to now carry 1.6T of total throughput.

This is, of course, the domain of carriers and not the
local delivery to individual customers. The 400G/800G/1.6T
equipment is typically set up in a ring architecture between
multiple cities. A typical ring might be NYC, Philadelphia,
Washington DC, Pittsburg and back to NYC. A break
in the ring and the traffic is simply routed around the ring
in the other direction.

> That's a quantum
> physics effect that has no electronic analogue. It also means
> that very long undersea fiber comm cables do not need any
> repeater-amplifiers along the undersea (or underground) run.

Yu are quite correct that undersea fiber routes add a whole
set of additional issues because of the inability to easily
access repeaters if they fail. Undersea routes require
VERY high reliability.

> So far, the ITU-R limits allocations at about 300 GHz. Anything

> GHz allocation limit. :-)
>
> At 4 GBPS rate, you can have over 30 video channels or 50,000
> POTS circuits or any combination thereof (and other types) all
> on that single "color" (main spectral line).

Agreed. And then, as I described above, we take the individual
"color" and mux it together with other colors (i.e. wavelengths).
We do that quite routinly for terrestial routes where repeaters can be
easily placed for maintenance access and repair access.

> The main limitation
> is not the fiber run but the terminal equipment to sort out all those
> different signals.

Agree completely. It also then involves repeater and amplifier
placements.

> Right now about 120 TV channels and 40 music-voice-only

> neighborhood over AT&T broadband service. A little "set-top"
> box does the tuning and decoding. Beautiful S/N, no snow,
> no noise all channels.

Yep...buy for clarification, my comments are directed at the
carrier level, not the "last mile" of delivery technology.

Cheers,
Bill K2UNK

I don't know who this "some of you" are. I make no such assumption, and haven't made any such claim here. I haven't asked anyone to change their preferred "ham radio lifestyle", and I won't.

All I have suggested is that the ARRL "refarming" proposal is poorly conceived, and advanced the notion that perhaps those little reservations might make a good place for pioneers and experimenters. You seem to hold that notion in some disdain. That puzzles me.

In reality the fiber is already there. Typically a multi-fiber
cable is run with spare fibers then available for growth of

capacity.

Exactly. Many people have now found they get all the
service they need with greater flexibility using only
a cellphone. One of the baby bells actually
incurred a negative growth of their hard wired
(i.e. traditional POTS) access lines during 2001.
(FYI - POTS, for those unfamiliar with the acronym
stands for Plain Old Telephone Service).

I agree. The hold-up is and has been the cost of deploying
separate fibers then to each individual home, especially
in residential and rural areas.

True, but those terminal boxes aren't located just anywhere.
They are usually in telephone company "central offices"
where RFI, etc. can be controlled better. They are
in cabinets for NEBS compliance, etc.

> Optical fiber cables are as susceptible to physical damage in
> their cable lay as copper-conductor cables.

True. But neither Jim nor I have said they weren't.

> electronics, high-speed A/D and D/A multiplexers, something
> totally foreign to the analog-only OOK CW ham.

Agreed. I think the original "anaology" was the simple
applicaption of OOK CW (not the character encoding).
Be it light or othersise, the digital bits (1s and 0s) are
simply on and off light pulses.

> The typical throughput on the UK-through-Med-around-India-
> around-SE Asia to Japan undersea optical fiber cable is 4 GBPS

Nope, the qualifications were *inseparable* parts of the whole. The Morse code exam and the theory exam were given equal pass/fail weights. That's why you concluded that Morse code was as important as everything else in ham radio combined and based your self esteem on it. Tain't so. CW is just one of many modes, is my favorite mode, and I certainly don't hate it. What I hate is to see you worshiping Morse code as if it were a religion that admits hams into seventh heaven after cleansing them white as snow.

> You may get far more negative response than you wished.

So did Galileo, but he was right. Time to face up to the fact that you have lost your King of the Mountain status but continue to beat that dead horse.

That statement is out of date by at least a decade. Using tunable lasers and WDM technology, multiple spectral lines can be used, simultaneously in a single fiber. Some representative products from our company can be found at the URL's below.

>
>And if you need another 1.6T, just pull another fibre through the duct.

You are mixing the optical CARRIER frequency with the information
transfer rate in bits per second. The existing high rate in information
transfer maximum in use is about 4 Gigabits per second

The optical "carrier" is in the below-IR to red in the visible
spectrum with wavelengths roughly in the 1000 to 700 nanometer
range. That varies depending on the optical fiber characteristics.

>>
>>> low time delay,
>>

>
>You are correct, sir! I should have specified the comparison between
>geosynchronous satellite link vs. fibre optic more clearly

You should have, but didn't. Bad engineering practices! Tsk.

The geosync orbit is about 22 kilomiles up from the equator.
Some simple trigonometry will handle the average slant range.
Depending on the commsat in use, you might have a two-way
path as long as 100 kilomiles.

>And all comms through a geosynchronous satellite is subject to the 50,000
>mile delay, regardless of terrestrial distance covered.

No. It varies depending on which commsat is used and your
geographic position on the surface.

Don't worry, the commercial folks already anticipated that and
were developing echo-cancelling techniques over two decades
ago. Those handle the wide range of delays.

>>Wireless is relatively new to the current "end user" of the service.
>
>In the USA, anyway. Just a matter of the marketing folks recycling an old
>term.

Only if they are Anglophiles. In common English-speaking use,
the term "wireless" had been out of date for about three decades.
It came back only to differentiate between wired digital systems
and RF-linked digital systems.

>The results are often confounding, however, as some end users don;t realize
>they are using radios when they use a cellphone or cordless phone.

That's only part of the situation. MOST users don't care one way
or the other for nomenclature and don't bother with it. To them
(one out of four citizens in US is a cell subscriber) it is just "the
phone" or the "cellphone."

Few long-time HF ditty boppers have grasped the concept of over
100 million L-band MICROWAVE TRANSCEIVERS in use daily
by "unqualified" citizens who don't, won't, or can't do morse.
Think of it...L-band, 1 to 2 GHz...Microwaves. There's no way in

this planet where vacuum tube technology can provide a cell phone
or a cordless phone in today's common-use form factor. There's
no way you can provide the security or the time-division
multiplexing without using digital techniques.

You are also forgetting about keyless-entry systems, short-range
VHF-to-UHF emitters coming into common use on automobiles,
wireless simple networking of computers in home and small office
environments, the Bluetooth RF links for everything from cordless
earphone-mike adapters for cellphones to short-range wireless
CATV and other security devices.

>>We have
>>actually flipped the use of RF vs hard wiring (fibre). In the past,
>>wireless (radio) was depended on for long distance and everything local was
>>wired. Today, wireless is a huge growth area with the "wireless" involving
>>the connection from user (i.e. cellphone) to a base unit and
>>the rest of the connectivity is then all "hard wired" via fibre.
>
>Good point! The result is that most of the distance is covered by fiber and
>the "last mile" by RF.

Then both of you are exhibiting some optical myopia on cell sites.
Next time start counting the microwave antennas which may be
the only link from a cell site to a central office. Neither are all
microwave "dishes" used for cellphone site linkage...there are
many other services for communications not involving connection
to the telephone system. Those include everything from private
multichannel microwave systems to studio-transmitter links for
broadcasting and pipeline telemetry along pipeline rights of way
(one of the first uses of multi-channel microwave systems 50
years ago).

>But even that is changing. How long before we see each home or business wired
>("fibred"?) with its own direct optical connection to the infrastructure,
>with the end user providing whatever terminal equipment is needed for voice
>telephone, data, entertainment, etc.? One fibre will do all that and much
>more.

That sounds like cribbing from an AT&T Broadband ad flyer.

If you can't understand Bluetooth, consider "HomePlug" which
does NOT use new wires or new optical connections. It does
its thing through the AC mains wiring that already exists...at
relatively high data rates...and poses a threat to HF-only hams
everywhere.

HomePlug seems to be a "comer" in the commercial market-
place. If it catches on the only escape for the HF-afficionado
is true country living with no neighbors. [such a move will get
away from evil PRB and solve that problem...]

>>Good overview. I injected a couple of things above for clarity.
>
>They are greatly appreciated, Bill.

Miccolis isn't responding to my comments, either in public or in private. No matter. "The truth is out there" even if the "historian" wants to overlook most of the big issues yet still sound like an "authority" on communications.

>develop that mode. They did not need APC rules or a low power subband, either.
>All they DID need was some flexibility and encouragement. That's what the
>"experimental farm" is all about.

G3PLX, Peter Martinez, developed PSK31. It was designed to work
in the existing narrowband ITU-R HF amateur allocations.

The only "experimental farm" of the time of that development was
the UK's trial at their new LF band...which had no relationship to
PSK31 development.

Please post the technical reasons cited by G3PLX or the on-air
experimenters in Europe needed all that RF power. There's plenty
of information on the development of PSK31 *not* posted by the
ARRL (as if the ARRL had anything to do with it). Remember
that you are the "historian emeritus" of amateur radio and the
development is part of recent history.

>If you want APC rules, put that part in your comments to the FCC. I'm not
>going to. I think it's unnecessary.

Fine. We'll put you down as being in the HF Horsepower race.
You think it's okay to run a full gallon plus to talk across town
and everyone will think you are just a rogue CBer who loves CW.

It must be that NCI has already punctured the imaginary
balloon of the virtual radio world in Dickie's head. It was
probably written up on his ASR28 hardcopy...except he
forgot to load up another paper roll. :-)

Now, now, Cecil, cut the guy some slack. Never mind that Model
19s (a Model 15 with a p-tape punch and reader) were used for
that same purpose before the 28s and the Model 40s did it after.
A Model 28 must have been very impressive in two-tone beige
and it ran at the fantastic rate of 100 WPM! Wowee!

I was "cutting message tapes" on Model 19s at a real live HF
station before the ASR28 expert was even picked on the draft.
Never got any 28s until later in civilian life and only briefly
tickled the keys on a big black 40 before going to video terminals.

>Uhhhhhhhh Dick, 56k data rates fit into the same bandwidth as SSB.
>Do you think the HF problems will never be solved?

Easy does it, Cecil. Dickie just recently learned that SSB uses
only half the bandwidth of AM. :-)

Meanwhile the ALE standards for HF communications were set
down about 8 years ago for handling HF comm amongst the
government and commercial users on HF and they've been
running all kinds of stuff on SSB with fine throughput.

Meanwhile a dozen assigned experimenters are busy investigating
the 60m band to see if it is "suitable" for radio amateurs. Hams
are busy working out the solutions already. They are making good
progress according to the Booth, Freret, and Imlay comment on
RM-10209. It looks promising for real, actual communications!
Just think...CW into the Carribbean area in 2001! Progress!

>utility.

Carl, you have to understand some of the "qualifying judges."
They want something new published in QST with Reviews and
all the fine words, plus ready-built equipment on the HRO
store shelves before they "believe" it has merit. Sort of like an
FDA meat stamp proclaiming it is "grade A (for amateurs)."

They can memorize sales ads (in QST of course) verbatim,
quote them at length, argue about the sales phrases endlessly,
but can't delve into theory because they haven't learned much
beyond turning a carrier on or off with a Lionel Train key.

Terms that have subscripts on them (like ee-bee and en-oh)
seem to be dirty words unless some Name has written them
up in QST, the theory pre-digested for popular consumption.

Those "judges" are all terribly technically qualified through
fantastic ability at high-rate morsemanship.

>Frankly, I haven't done any development on that proposal ... first,
>I moved into a newly-constructed house and am still in the process
>of organizing the office, workshop, electronics lab, and ham shack.
>Second, the "We don't want no stinking, reliable digital systems, we
>LIKE to have to work hard to dig the weak ones out of the noise
>because we insist on using less capable methods." response here
>was, frankly so nauseatingly backward that it pushed that idea down
>the priority list a ways.

Some folks need to keep their hands busy turning analog knobs
and pulling imaginary on-offs through the noise...they can't be
bothered with evil digital techniques that they cannot comprehend.
They are already superbly qualified courtesy of that old-style
morsemanship skill with a federal merit badge to prove it.

>Other things at higher speeds and higher
>frequencies have been more on my mind lately, but I still have an
>interest in more capable HF digital systems.

While the gubmint and money-grubbing commercial radio services
are making strange noises on HF with ALE SSB circuits, the
technically-qualified long-timers are pushing the state of the HF
amateur art from 1935 all the way to 1937. That's progress! :-)

Dick,

Please explain how the lack of message forwarding between
mailboxes would have "magically" converted the "sow's ear"
of Bell 202 AFSK modem tones through the mike/speaker
jack of 2m FM radios into the "purse" of a decent packet
radio system???

There's nothing inherently wrong with forwarding messages.
How do you think you see my postings here? Or get your
e-mail, for that matter?

The problem is that the SYSTEM (and I use the term VERY
loosely) did not have enough capacity to handle the traffic offered
and it choked and died as a result. Had better (faster) technology
been embraced and adopted on a large scale, packet radio would
still be interesting and useful ... in fact, moreso than in the very
early days ...

> Some of you seem to blithely assume that technology will solve all
> problems and salve all wounds. But it can't place gray matter in the
> empty space between the ears of the vacant eyed, nor can it undo the
> damage caused by those same induhviduals.

Technology could have solved the ills of packet radio, but too many
people like you were unwilling to even consider the need for something

better than 1200 baud AFSK (and too cheap to upgrade), so it essentially died because it became essentially unusable and boring compared to a dial-up internet connection.

You are right however, in one respect ... technology "can't place gray matter in the empty space between the ears of the vacant eyed, nor can it undo the damage caused by those same induhviduals."

It's really too bad that technology can't help you, but at least you don't have false hope.

I certainly don't brief him on the banter here ... besides, why WOULDN'T
he ignore it? The banter and fighting here have NOTHING to do with the
formal process prescribed for the FCC to establish and/or modify its rules.
r.r.a.p. is IRRELEVANT to the FCC process.

> > Second, Bill is tasked with occasionally making determinations of what

> has been noted many times already, there is no obligation for FCC to
> "consider" anything, or if it is considered, to give it any weight.

Actually, the Commission is obligated to *consider* all input from the
public comment/reply comment process that establishes "the record"

in a proceeding. What they are *not* required to do is to "buy into"
any particular argument ... in other words, they have the discretion to
consider, then reject, lame ideas like the ones you put forth here all
the time :-)

> That
> decision is his to make, subject only to overrule should he make some
really
> blatant faux paux.

That's not so ... Bill is not so autonomous as you seem to think ... he may
draft rules on some subject in response to a petition or whatever, but his
work must be reviewed and approved by quite a few layers of management
and then, ultimately, by the Commissioners before it becomes "law."

Your insinuations of less than dedicated public service by Bill and your
outright attacks on him are still TOTALLY unfounded and morally
reprehensible.

"Amateur" here means "no pecuniary interest",
vs. "professional" meaning "making money at it"

There are no "professional" DXers and such....

YOUR "reality" Dick, seems to be "Things aren't as crappy as they
were in the early days. Thus, since things are 'good enough' (for you,
at least), we don't need any more improvements."

That's the recipe for stagnation ... unfortunately, you and your ilk
have held that view for decades now, with the result that we are
generally decades behing the technology/knowledge curve on
average.

> > EXCUSE ME, but we STILL need technical improvement ... it's one of

>
> All of these were suggested to the FCC. Yet the FCC insisted that all
> qualifying Tech Pluses show up at VE sessions and pay a VE fee to get a
license
> they'd earned years before. Why?

Because the system wasn't set up to handle that input directly from
the public ... the FCC doesn't receive/review old documents ... that
task has been relegated to the VE teams and VECs to manage.

> >NCI and the NCVECs both told the FCC "No freebies",
>
> Allowing the Tech Pluses listed above to get Generals without the VE
session
> hassle isn't a freebie.

Neither was it a burden ... I had NO issue with going to a VE session
to upgrade ... I had intended to take the extra test, but the VE team
on Friday night made a mistake and didn't have the test forms ...
so I gave them my paperwork and got back the paperwork that
said I was a General. When I got home, I got on the internet
and found another session, from another VE team Saturday morning
and drove down there with all of my paperwork, took and passed
the Extra test, and came home an Extra ... did I mind? Not really.
It would have been nice to have taken care of it all Friday evening,
but people make mistakes, so I finished up on Saturday morning.
Yes, I paid 2 VE session fees ... BFD ... those folks don't make
any money on the deal, and I'm happy to pay the very modest fee
for the service.

> >it was the ARRL who wanted to give freebies (presumably
> >to make some folks feel grateful in hopes they'd sent in their
> >subscription, er membership, $$$)
>
> You mean the upgrading of existing Novices and Tech Pluses to General.

Yes ...

> Your comments show an anti-ARRL bias that has no basis in fact.

I don't think it shows a bias ... it's just my personal view, based on the
facts in evidence ...

> What would you
> say to someone who claimed that the NCVEC and NCI stance was driven by a

> >techniques that are our future.
>
> You've just proved my point.

I don't think so ... density of hams (per capita or per square mile)
doesnt' seem to me to have any more correlation to behavior than
does a Morse test.

> Note that ALL of the folks you hear on the HF 'phone bands have passed
multiple

waivers.
> One cannot assume that any HF ham has passed more than a 5 wpm code test
> without more information.

Many, if not most, of the worst offenders are long-timers who got
their "higher class" license (but not the manners to go with it) before
code waivers existed ...

Reminds me of a story: A Texan died and walked up to the gates. He said,
"Hey, St. Peter, Heaven looks just like Texas." The gatekeeper answered,
"That ain't Heaven, and I ain't St. Peter."

>Be it light or othersise, the digital bits (1s and 0s) are
>simply on and off light pulses.

My read on Dennis' message was as a tongue-in-cheek
comment on OOK modulation. :-)

Heh. "...simply on and off light pulses." Okay, now make
the comparision between about 4 telegraph key closures per
second and 4,000,000,000 optical on-off transitions per
second. Are those possibly "similar" or have you just
ventured into reducto ad absurdum territory?

>> The typical throughput on the UK-through-Med-around-India-
>> around-SE Asia to Japan undersea optical fiber cable is 4 GBPS
>> in two circuits. That bit rate alone is twice as high as highest-
>> band ready-built off-the-shelf ham equipment.
>
>Agreed. And I know of many other "rings" that far

>exceed 4 Gig.

Yes, I've seen mention of them. However, I'm more impressed
by about 12 kilomiles of a terrestrial line, most of it under water
and not using any cable-enclosed electronic repeaters.

I don't know about your experience, but I find that on-off
switching of very long lines at 100 MBPS to be an "upper
limit." Thinking of bit rates 40 times that "limit" makes me
appreciate such "low-speed" (?) bit rates of 4 GBPS as being
electronically sophisticated. Your mileage may vary.

There's very little ready-built ham equipment that works with
carrier frequencies above the 2 GHz ham band. That mention
just to point out the truly rapid rate of 4 GBPS.

>
>Good point. And the American Indians used smoke signals.

Let me quote from NAVSHIPS 0967-255-0010, "Principles of
Telegraphy," June 1967, Department of the Navy, Electronic
Systems Command, Part A (historical background) -

" For centuries men of all nations and many positions in life
have recognized the need for rapid communication, and have
devoted their attention to devising the ultimate communications
medium. Through these efforts, many curious devices have
evolved and are cited in the annals of all nations. Fire, smoke,
bells, trumpets, drums, and guns have all played a part; many
primitive devices are still to be found in use in some parts of the
world. [such as J-38s and converted tuna fish cans - LHA]
For example, the use of flags and various forms of semaphore
signaling date from the thirteenth century. [four centuries before
the Morse-Vail system, not just two - LHA] Another type was
the heliograph, a system employed for visual signaling in sunlight,
which reflected the sun's rays from one point to another. However,
this method was limited, for in dull weather and at night lamp

signaling had to be used."

Both the French and British semaphore networks have been
well-described in books and considerable information is available
on the web for those. Those date back to the 1600s. Their
throughput was far faster than the best horse-carried message
system.

>> >Communications facilities available to President Andrew Jackson had more in
>> >common with those available to Julius Casear than they did with those
>> >available to President Abraham Lincoln.
>>
>> Neither Julius Caesar nor Orange Julius was president of the
>> USA. Please try to confine your analogues to some common
>> geography.
>
>Picky picky.

I'm not sure why President Jackson was picked for that quasi-analogue
(it couldn't be "stonewalling" could it?). Polk or Taylor were elected
(1840, 1844 respectively) at about the first trial of the Morse-Vail
telegraph system, Jackson was first elected in 1828, before Morse
began his tinkering. That made Pierce and Buchanan (before Lincoln)
as Presidents with telegram capability.

Engineers are supposed to strive for accuracy. That was impressed
on me by one James Miccolis. Accuracy was not shown. :-)

I'm sure it is, mister chief. I haven't played on a stable table (optical bench) for about 12 years. Wanna see my speckle? :-)

I know you've pulled up a Bragg Cell and wanna tout, but I was referring to INSTALLED SYSTEMS AT WORK. NOW.

ON-OFF OPTICAL SWITCHING SYSTEMS. WORKING NOW.

Do you understand the flow of discussion or do you need tutoring?

>Using tunable lasers
>and WDM technology, multiple spectral lines can be used, simultaneously in a
>single fiber.

Marvy-do, golly wow, and other suitable-for-victorian-adults explitives.

So you have multiple wavelength capability. Just HOW do you put information to be communicated on the fiber...and HOW FAST can it go? Do you have an analogue of an "optical VFO" and use FSK, PSK, or what?

It doesn't really matter for amateur radio, does it? The longest optical wavelength for fiber comm is well above the 300 GHz ITU-R allocation limit. Don't get all bent out of shape on the discussion. You are looking through a half-silvered mirror or you've backed up into a corner cube, dunno which.

>Some representative products from our company can be found at
>the URL's below.

Yessiree, I can just see all the eager radio amateurs descending on those URLs, wanting to install optical VFO capability on their laser-emitting transceivers.

Optical wavelengths are license free. Not only that, they are totally unregulated! Maybe you ought to make another RM proposal to have the FCC just regulate the heck out of them

optical wavelength ranges! No more of this free stuff! Make all
Take The Test!!!

May the Angstrom be with you...

You got wounded? Were all the "forward and store idiots" like the Chinese
overrunning your position?

But it can't place gray matter in the
> empty space between the ears of the vacant eyed, nor can it undo the
> damage caused by those same induhviduals.

So the people on the forward edge of amateur technology have no "gray matter
in the empty space between the ears of the vacant eyed?"

Brian

The word "amateur" is NOT a problem except for you. There is absolutely nothing wrong with the term. NOTHING. Who do you think the "pros" go to when disaster strikes? AMATEURS. In astronomy most comets, asteroids, nova, supernovae are discovered by AMATEURS. Most planet data is collected by AMATEURS. Most solar data is collected by AMATEURS.

Being an amateur is not degrading at all. It's something to be PROUD of. I'm a amateur radio operator and an amateur astronomer. I'm damn proud of it too. I even got an award from the AAVSO for my solar contributions (over 1,000 observations). The word amateur is not hurting ham radio.

Should I drag out the QSO with a ham in Ohio
who was just oh so proud he was running a KW when
I told him he was booming into NJ. He made no effort
to lower power...BUT then too, others in this newsgroup
then suggested it may have been "too difficult" to
lower power...which, in my not so humble opinion...
is just plain bad operating practice.

> Such situations occur all the time on HF.

So much for the vaulted attitudes of those that
abuse power on the air when they are fully
aware they don't need even 1/4 of what they are running.

Cheers,
Bill K2UNK

So Dick, you never answered...
Even if Mr. Cross did read RRAP, as an FCC staffer, do you
think he (Mr. Cross) would be "intimidated" by anyone because
of what that "anyone" may have written in RRAP?

Cheers,
Bill K2UNK

Classic Dick... "Hey dingaling?"

As to Ham radio not the internet...just where in
Part 97 does the FCC create the impression on you
that hams couldn't, shouldn't wouldn't find transmission
of files (video, data, or whatever) beneficial.
The apparent fact that you (Dick) see no benefit
in such an accomplishment is telling in and of itself.

56K isn't internet quality. If you satrt talking 1.544 Megabits/sec,
now you're starting to equate to internet common practice.

Netherlands votes to support suppression of S25.5

At the VERON Council's meeting today (04/26/02)
a proposal by the Amsterdam and Twente divisions
to support the IARU's new policy on Morse testing
was accepted by an overwhelming majority. This gives
the VERON BOD a clear mandate to press for abolition
of S25.5 morse code treaty requirement.
VERON is the national organization of
amateur radio operators in the Netherlands.

Additionally, the chairman of VERON told those
present that he wants to make a plea for
following the Radio Society of Great Britain's
example in implementing a Foundation Licence.

>referring to INSTALLED SYSTEMS AT WORK. NOW.
>
>ON-OFF OPTICAL SWITCHING SYSTEMS. WORKING NOW.

Len,

WDM systems have been deployed for 5 or 6 years now. They run at
the 1550 nm wavelength (about 193 THz frequency) sweet spot in glass. I
think the original Erbium-doped fiber amplifiers gave optical gain
from 1530 nm to 1560 nm, or a bit wider, though I think newer equipment
has doubled that. I'm pretty sure the ITU standardized a 0.8 nm
(i.e. 100 GHz) channel spacing, so you can get 40 carrier wavelengths
into the EDFA bandwidth. The 100 GHz channel is wide enough for 10 Gbps
OOK switching with its sidebands. Most of the systems installed in the
last 3 or so years have hence supported 40x10 Gbps channels (i.e.
wavelengths). I've seen a lot of this stuff installed, though I can't
say for sure that I've ever seen one where I was sure all 40 channels
were turned on. That's a pile of bandwidth on a single fiber, in fact
about 40 times what was possible 3 or 4 years prior to that, so there's
a relative glut of both unprovisioned fiber and unprovisioned bandwidth
these days.

The SONET multiplexing hierarchy likes bit rates which are a power-of-four
multiple of 155.520 Mbps, so the next stop after 10 Gbps is 40 Gbps.
I note that Bill Sohl mentioned a Bell Labs press release indicating
that they'd managed to do a long-haul 40x40 Gbps test, which hinted that
their system had replaced OOK modulation with some form of PSK. The
latter was probably necessary to keep inside the ITU-standard 100 GHz
channels. It's a lot like radio, just with bigger numbers.

Note that the above describes land-based fiber systems. I know
undersea fiber installed in the last few years also supports
2.5 Gbps or 10 Gbps WDM, but I doubt they run 40 channels since

the undersea stuff is usually done more conservatively.

>>Using tunable lasers
>>and WDM technology, multiple spectral lines can be used, simultaneously in a
>>single fiber.
[...]
>So you have multiple wavelength capability. Just HOW do you put
>information to be communicated on the fiber...and HOW FAST can
>it go? Do you have an analogue of an "optical VFO" and use FSK,
>PSK, or what?

Each laser powers a channel at a different frequency, so channels
are FDM. Tunable lasers are essentially transmitters with a
VFO. If the signal is digital (cable companies might use analog
modulation on fiber, though I'm not sure) they're used as CW
transmitters and the carrier on each channel is OOK modulated ("on"
is 1, "off" is 0) if the bit rate is 10 Gbps or less. Most long-haul
systems run at 10 Gbps, though local stuff might be lower in bit rate.
Telephone company stuff is almost always at 1550 nm, though cable company
use of fiber is a whole other thing and they may use 1310 nm.

I guess the original point might still be that we'd certainly call
OOK CW a digital modulation when used in these systems, and it isn't
clear to me that the nature of the modulation changes as you lower
the bit rate to human speeds, so I think calling OOK CW in amateur
radio "digital" is probably not incorrect.

The "King of the Mountain" whine is strictly a false construct of
the NCTA. All we're doing is supporting the requirement for radio
amateurs to learn a useful, basic communications mode. This
KOTM crapola is just whining -- something for which the NCTA
has made itself famous.

Carl:

Axeually, I have a Cecil-like "live and let live" attitude toward hams who
are willing to limit themselves to life as a No-code Tech, and pursue
"public service" communications, repeater technology, V/UHF weak
signal modes, etc. It's the ones who just kerchunk all day, yakk for
hours with the bowel and bladder reports, and WHINE constantly about
the code testing requirements (even at the present 5 WPM) that I am
prone to accuse of allowing their knuckles to generate friction with the
floor. If said whining had never occurred, and if these no-code whiners
hadn't accused me of everything from single-handedly causing ethnic
cleansing and global warming, I probably wouldn't be here. Cause and
effect.

It's not a matter of "right" or "wrong" (at least for
me) but about what works, recruiting wise.

>Who do you think the "pros" go to when disaster strikes?

Usually, other professionals, I think, though amateurs
have auxilliary roles.

>In astronomy most comets, asteroids, nova, supernovae
>are discovered by AMATEURS.

Not true with comets anymore, in spite of some recent
successes. And while amateurs make contributions in
those other areas I rather doubt that they outstrip the pros
anywhere today. The new NEO search programs are
turning stuff up by the bucket load, asteroids and comets
alike, and it was almost amazing that Ikeya-Zhang got
through to be discovered by human beings!

>Most planet data is collected by AMATEURS.

What in heaven's name are you talking about here?
The textbooks and web sites are FULL of material
generated by pros, not amateurs, which is not to say
that amateurs are not doing a lot of good work. Just
how much space-based planetary information, the
bulk of the real stuff today, is generated by amateurs?

>Most solar data is collected by AMATEURS.

You're kidding, right? MOST most solar?
I don't THINK so. The folks at Big Bear and
Kitt Peak might be a little surprised to hear that.

Hey, I am proud too, to be an amateur astronomer and an amateur radio operator. However, that does not allow me to put my head in the sand vis-a-vis what I plainly see as an image/marketing problem for Ham Radio today. Times change.

You might take a look at this:

"Round Trip Time Estimation," P. Karn & C. Partridge, ACM
SIGCOMM-87, August 1987.

The first author is KA9Q. The paper deals with a fundamental insight gained in good measure by attempting to run TCP/IP over amateur packet radio links.

To make a long story short, the Transmission Control Protocol (the first part of TCP/IP, the pair of protocols upon which the Internet is based), which was a decade or so old when the paper was written, didn't work. TCP/IP networks collapsed under load. There were two or three very important papers written in the later 80's that provided a fundamental understanding of why that was and what to do about it. The above was one of those papers, and the TCP in your computer almost certainly implements the "Karn Algorithm" as part of this repair.

I wouldn't underestimate the importance of that paper. TCP/IP wasn't the only suite of networking protocols that existed at the time, and TCP/IP was considered by a lot of people in phone companies and governments and standards bodies and places like that as an academic toy which couldn't possibly be made to work. If you are reading this you should be grateful that view turned out to be wrong, because even if you think the Internet sucks I guarantee you that you would like the phone company/government version of a computer network much, much less. Amateur radio, and the experience of trying to run those protocols in a really crappy ad hoc environment, contributed to the eventual outcome in an important way.

If amateur experimentation with packet radio was a "failure" then I'd suggest that if experimental failures like this would happen in amateur radio every few years or so the service would be much better off in terms of justifying its existance. In an experimental service even things that don't work out can teach things of great value. The only real "failure" is the failure to attempt anything new at all.

No, Lennie, you have expounded upon your rationalization for NOT telling us
which radio service was created for "strictly recreational" applications.

No such radio service exists. Never has.

Nothing you have said is even remotely borne out in FCC documentation.
Part 95 was created for PERSONAL USE, and "FAQ's" of the era SPECIFICALLY
stated that C.B. radio was NOT for "hobby-type, chit-chat" communications.

Now..>>.PLEASE<<...WHCIH radio service was created to be "strictly
recreational"...?!?!

Wrong-O Big Boy. I'll support mode endorsements based upon mode exams. I
don't support a single mode exams that excludes people from operating other
modes. None-the-less, Morse Code has nothing to do with electronics, radio
theory, rules, safety, etc. It's merely an encoding scheme.

> are willing to limit themselves to life as a No-code Tech, and pursue
> "public service" communications, repeater technology, V/UHF weak
> signal modes, etc.

Larry,

How *benevolent* of you, oh exhaulted one! (NOT! on both counts!)

"... willing to limit themselves to life as a No-code Tech ..." were your
words.

Translation: As long as those who don't share your propensity for Morse
code "stay in their place," like the colonial slave-master relationship, or
the "back of the bus" thing, "you'll be benevolent enough" to "allow them
the privilege" (which they've earned with no help from you) of VHF/UHF
only operation (the back of the bus, in effect).

However, if they should feel that Morse is irrelevant, and should not
be an artificial barrier holding them back from HF privileges, then THAT
flies in the face of your "exhalted" status and is "stepping over the
boundary"
(that you view as existing between "exhalted beings" such as yourself and
"lower life forms" who haven't passed a high speed code test ...)

I don't see that as a "live and let live" attitude at all ... it's clear
from your words
and actions here that your attitude is TRULY that you and others who have
passed a high speed code test are, indeed, "exhaulted" in some perverse way
and because of that (delusion), you feel that it's OK to dump at will on
those

who you view as being "inferior" ...

Your attitude STILL sucks, Larry.

The "King of the Mountain" structure was invented by the PCTA folk.
If some Extras had not paraded around acting like they knew everything
just because they knew 20wpm Morse code and had met the minimum technical
requirements for an Extra license, this whole sad pecking order situation
would never have existed.

Dick will almost certainly, as he did with Shannon, deem it "irrelevant,
because this is AMATEUR radio."

I agree that the amateur experiment with packet radio was useful. My
only point was that Dick's assertion of why it has died off is not the true
reason, but that the true reason is that amateur packet radio (almost
100%) stagnated at 1200 baud, and at that rate could not provide
the capacity or response times necessary to keep it interesting and
useful, compared to even a dial-up internet connection, for the vast
majority of users.

How soon you forget. Just above, you said you can "produce perfectly formed
CW characters even when using my ... J-38 straight key." Are those "perfectly
formed CW characters" within a nanosecond of being perfect? within a microsecond?
Within a millisecond would certainly not be perfect.

Oh, would God the gift to give us to see ourselves as others see us.
Larry doesn't seem to realize that his blatant pecking order modism
is still showing.

The Jersey Shore Amateur Radio Society is pleased to announce its 4th Annual Shorefest to be held August 11, 2002
at the Bayville (NJ) Fire House, Route 9, Bayville, NJ.

Table reservations are now being accepted. The hamfest is all indoors in 4,000 square feet of airconditioned pleasure.

If you plan to sell your gear in the the New Jersey shore area this is your only hamfest left in the area. Look at the current hamfest lists. Absecon, Brookdale, Shore Points, Garden State, they are all gone. The JSARS Shorefest is the only hamfest remaining along the shore from Sandy Hook to Cape May. With fog and early morning rain last year that's why we drew over 1,000 hams to our hamfest.

Come see all the area vendors in amateur radio and computers.

Visit http://www.jsars.org to see pictures of our past hamfests and to download a PDF hamfest flyer.

For advanced table reservations or tickets - Contact W2CE at (732) 657-9339 or w2ce@arrl.net

Robert Reed, W2CE

Amateur Radio Newsline™ Report 1289 - April 26 2002

Amateur Radio Newsline report number 1289 with a release date of
Friday, April 26th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Amateur radio aids in the aftermath of two rail accidents. This story is first on Amateur Radio Newsline report number 1289 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO ASSISTS AT CALIFORNIA TRAIN COLLISION SITE

Amateur radio played a pivotal role following two major rail accidents occurring within a few days of one another. On Tuesday April 23rd, a Southern California Metrolink commuter train headed to San Juan Capistrano collided with a mile long freight train that may have missed a stop signal and wandered onto the same track. 2 people on the commuter train were injured and over 260 injured. Local hospitals were swamped with casualties. Joe Moell, K0OV, has more:

--
About four times a year, the hospitals and emergency responders in Orange County, California, hold large-scale drills to test the patient triage and transportation procedures that must be followed in the event of a mass casualty incident. The Hospital Disaster Support Communication System -- an ARES group with agreements to support all 35 hospitals in the county -- is always asked to participate. So it was on Tuesday, April 23 as two dozen HDSCS members awaited their assignments for a mock hazardous material incident, to be staged on a shopping street in Brea, California at 9 AM.

But it was not to be. At 8:10 AM, just 5-1/2 miles away in the city of Placentia, a 6000-ton mile-long freight train collided with a Metrolink double-decker commuter train. HDSCS hams were immediately assigned to the fourteen hospitals expected to receive patients. For the next 4-1/2 hours, a total of 28 hams provided vital links between these hospitals, the county's Central Point ambulance dispatch, and the county's Emergency Medical Service agency.

--
[sound bite 1]
--
Other traffic included verifying victim dispatch, locating victims, providing hospitals with information for inquiring victim families, and liaison with hams supporting the Red Cross. Within some hospitals, hams provided direct

communications between triage areas, Emergency Departments, and Command Posts. Dennis Kidder WA6NIA tells how important this was at one facility:

--
[sound bite 2]
--
This was the 75th actual hospital communications emergency in the 21-year history of HDSCS. From Orange County California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

More on this in a future Amateur Radio Newsline report. (ARNewsline™)

(Note: For more information about this organization and about effective ham radio support for hospitals, go to www.hdscs.org.)

**

RESCUE RADIO: HAM RADIO ASSISTS AT FLORIDA DERAILMENT

Ham radio also helped provided coordination of emergency services following a train wreck near Crescent City Florida on Thursday April 18th. The accident happened at about 5:15 P-M Eastern time. Billy Williams, N4UF reports from Jacksonville:

--

The accident killed four passengers and injured 159 other passengers. It happened after the engineer of an ill-fated Amtrak train saw damaged track and hit the emergency brakes.

Rescue workers say 21 of the train's 40 cars including 14 of the 16 passenger cars derailed. Seven flipped on their sides, lying along the mangled track in a zig-zag pattern. Some passengers escaped through windows, while dozens of were trapped inside for hours.

Soon after the accident Bill Krueger, KF4EJD, was on the scene and at the wreck site relaying information to hams associated with ARES. Other hams soon had portable stations operational at the Putnam County Emergency Operations Center and the Crescent City High School shelter. A secondary shelter at Middleton-Burney Elementary School was established to assist in moving the passengers.

At the peak of activity, about 400 people were sheltered at Crescent City High School where a triage center had been set up. Also, a group from the Northeast Florida Chapter American Red Cross headquartered in Jacksonville was sent to the scene. This included several Jacksonville ham radio operators and a Red Cross Emergency Response vehicle.

Two hospitals in Jacksonville were staffed by Duval ARES operators to provide status reports to medical volunteers who were ready to head to the site if needed. Their help was not required and the hospital ham stations were secured at 10 PM Eastern time..

Meantime., the Florida Crown Emergency Net was in operation on the W4IZ Repeater System which was linked to the KF4PXZ system in Palatka. The net was in session from 5:30 to after 11PM.

There were many hams who volunteered in this emergency. Far to many to list here. And they once again proved that ham radio was willing and able to help when called on.

For the Amateur Radio Newsline, I'm Billy Williams, N4UF, in Jacksonville Florida.

--

According to news reports, many of the train's 418 passengers were senior citizens traveling between northern homes and winter retreats. (N4UF, ARNewsline™)

**

REALLOCATION: FCC PUTS ARRL NOVICE BAND PROPOSAL TO PUBLIC COMMENT

Comments are due to the FCC by May 16 on An ARRL petition that would eliminate the 80, 40 and 15-meter Novice and Technician Plus CW subbands. The information is from an ARRL Bulletin. Amateur Radio Newsline's Paul Courson WA3VJB, reports from the nations capital:

--
Designated RM-10413, the notice is aimed at reusing the current Novice spectrum in part to expand the 80 and 40 meter phone subbands. The ARRL's petition was filed in March asks the FCC to eliminate the Novice and Technician Plus Morse only subbands and divvy them up alleviate what the ARRL sees as overcrowding elsewhere.

If the FCC goes along, the current Novice and Technician Plus would be permitted to operate on the 80, 40, 15 and 10-meter General-class CW allocations at up to 200 Watts output. For General and higher class operators, the ARRL plan would implement changes in the 80, 40 and 15-meter phone bands, expanding phone segments for many amateurs.

But the ARRL petition goes well beyond just refarming the Novice bands. The League also seeks FCC permission to use spread spectrum on 222 to 225 MHz. It also proposes to expand the pool of special event call signs beyond the 1 by 1 format to include identifiers for United States territories that do not provide for mailing addresses. The ARRL also wants to incorporate into the rules a 1990 FCC waiver authorizing amateurs in specific areas of Colorado and Wyoming to operate on certain segments of the 33-cm band. Lastly, the petition asks that the government clarify rules to indicate that modulated CW is permitted for repeater station identification.

May 16th is the designated commentary cutoff date on RM-10413, and the FCC is expecting a lot of response on this one.

Paul Courson, WA3VJB, Washington.

--

And we at Amateur Radio Newsline want to know your position on the reallocation of the current Novice subbands? Do you like the ARRL proposal? Do you have what you consider a better one? Should the subbands even be re-farmed? We would like to hear from you. Please send us a short e-mail with your opinion and we will put some of them on the air in future newscasts. The electronic address is news;ine@arnewsline.org. (ARRL, ARNewsline™)

**
RADIO RULES: HAM PETITIONS FOR MANDATORY FIELD REPAIRABLE RIGS

How would you like to be able to take the cover off your radio and replace a plug-in highly complex integrated circuit, put the cover back on and have the radio work again. Kind of the way it was when tubes rather than solid state ruled ham radio. Well, that is what Nickolaus Leggett, N3NL, says hams should be able to do and he is asking the FCC to provide the rules to make it so. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the details:

--
Nikolaus Leggett filed his request to the FCC in February. After reviewing it, the Commission has assigned it as RM-10412 and has set May 16th as a commentary cutoff date.

What Leggett suggests is not really new. He believes that Amateur Radio operators should have a fighting chance to keep their own gear operational. He acknowledges that today’s high tech equipment may not be component level serviceable, but he as asking the FCC to make mandatory certain key aspects of design so that a ham with a general knowledge of troubleshooting techniques might get a broken radio back in operation. Especially in time of a declared emergency.

--
Leggett: “What I proposed is that the Commission establish some sort of standards that would essentially establish that equipment be field repairable in some manner. Either it should have replaceable modules or replaceable circuit boards or parts on a circuit board should be spaced at a certain distance so that you can access them. There should be LED indicators on digital busses. There should be test points to take voltage and current measurements. In other words the equipment should be accessible for the Amateur to repair or modify it.”
--

Leggett acknowledges that should the FCC adopt his recommendations it will probably lead some makers of ham gear to drop out of the United States Amateur Radio marketplace:

--
Legget: “My response on that is to look at the QRP field. There is a very nice Single Sideband QRP transceiver kit, which costs about $700. It is fully field repairable. It is advertised allot in QST Magazine, and this indicates that there certainly are vendors in the marketplace who can come out with a nice piece of equipment; highly regarded; very well reviewed; and at a reasonable price that is field repairable.”
--

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW in Los Angeles.

--

You can hear lots more with Nickolaus Leggett on this weeks RAIN report. Take your web browser to www.rainreport.com or call area code 847-827-7246. Meantime, the manufacturers who supply ham gear are expected to file in opposition to the Leggett rule making request. (ARNewsline™, RAIN)

**

SPECTRUM USE: FCC ON AMTS AND DENIALS TO HAMS

The FCC has approved proposed rules allowing geographic based licensing of coast stations in the Automated Maritime Telecommunications Service, the primary user of the 219-220 MHz band. According to the ARRL Letter, the Commission also agreed to consider an ARRL petition for changes in the rules governing the secondary amateur allocation at 219-220 MHz.

Amateur use of the band within 80 kilometers of an the Automated Maritime Telecommunications Service or AMTS coast station is currently requires permission from the AMTS licensee. Industry practice has been to routinely deny such requests, regardless of channel separation.

Now, the FCC will consider whether AMTS licensees denying permission should be required to give a technical justification for the denial. This, in conjunction with the ongoing 3-G proceeding that's considering use of 216-220 MHz for new technologies. (ARRL)

**

SPECTRUM REALLOCATION: CONGRESS PROPOSES DELAY IN UHF CHANNEL AUCTION

Congressional lawmakers say that they plan to introduce legislation to delay indefinitely the Federal Communications Commission's June sale spectrum currently used by television broadcasters to wireless carriers. Amateur Radio Newsline’s Norm Seeley, KI7UP, Takes a closer look at what is about to transpire:

--
The proposed legislation is being sponsored by House Energy and Commerce Chairman Billy Tauzin and ranking Democrat Representative John Dingell. The current law requires the FCC to auction the spectrum used channels television channels 52 through 59 by September 30th of this year. But if Congress says O-K, the measure will eliminate the legal deadline in September for an auction be conducted. It will also tell the agency not to go forward with the sale

slated for June 19th.

The anticipated congressional action is intended to give more breathing room for broadcasters to move off their current analog television channels. It would also give mobile telephone carriers more certainty about a date when they would obtain this spectrum so that they make available a number of new services.

So far, no one has gone to court to force the FCC to hold the sale.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

More on this story in future amateur Radio Newsline reports. (Published news reports)

**

RADIO RULES: COURT SAYS OWNERSHIP CAPS ARBITRARY AND CAPRICIOUS

Another blow to those who support a cap on the number of media outlets any one company can own. This, as a federal appeals court rules in favor of easing an FCC regulation that bars a broadcaster from owning two TV stations -- known as a duoploly -- in a single market. That is, unless there are eight other broadcast TV stations in that same market.

The court held that the Federal Communications Commission was arbitrary and capricious in excluding cable companies and other media outlets from the eight outlet standard. The ruling also admonished the FCC for failing to back up its argument that diversity and localism are protected by broadcast stations alone.

The court stopped short of declaring the duopoly rule unconstitutional and throwing it out altogether. Rather it directed the FCC to rethink that part of the rule dictating what constitutes a broadcast voice in any given market. (Published news reports)

**

RADIO LAW FOLLOW-UP: TOWERS VS. BIRDS

The United States Fish and Wildlife Service believes that communications towers are estimated to kill 4 to 5 million birds each year. And the service says that these kills violate the spirit and the intent of the Migratory Bird Treaty Act.

Now, a new organization called the National Antenna Consortium has been formed. Its purpose is to help communications companies deal with bird kills and other vexing issues associated with tower construction.

The CGC Communicator reports the group held a meeting at the recent National Association of Broadcasters meeting in Las Vegas. Speakers included Andrew Skotdal of KRKO Radio and attorneys Barry Umansky and Fred Hopengarten, K1VR. More information is on the web at migratorybirds.fws.gov (CGC Communicator)

**

NAMES IN THE NEWS: KB0G SPEARHEADING LINUX

A alternative computer operating system now has a ham helping to develop it. Nate Dueher, WY0X, reports:

--
One of the worlds largest Linux organizations now has a ham radio operator as its leader. Bdale Garbee, KB0G, of Blackforrest Colorado, has been elected as the 2002 Project Leader for Debian Linux. Bdale, who is known by many hams for his excellent work on many Amateur Radio projects including the RUDAK system on board AO-40 has also been on the software development team for Debian Linux for many years.

Debian -- spelled D-E-B-I-A-N -- has excellent support for many popular ham radio modes including CW, RTTY, packet radio, APRS, PSK-31 and many others. It is a version of the Linux operating system known world wide as dedicated to free software, quality and even ham radio. Bdale’s leadership skills should prove to be a match made in technology.

For the Amateur Radio Newsline, I’m Nate Nueher, NY0X, in Colorado.
--

More information on Debian Linux can be found in cyberspace at www.debian.org. (NY0X, ARNewsline™)

THE THANK YOU CORNER WITH ANY JAREMA, N6TCQ

Last week, Support Fund Administrator Andy Jarema, N6TCQ, presented the latest Newsline fiscal report. Andy is back with us this week to say thanks to those who supported Amateur Radio Newsline™ in the month of January. Here is N6TCQ:

--

In the month of January we heard from Benton Bonney, W4PE of Orlando Jodie Steggerda, N8ALJ of Champaign, IL. From California, we heard from GEARS, the Golden Empire Amateur Radio Society of Chico, as well as associate Joann Biegler, William Walters, WA2IBM of San Jose CARA, the Catalina Amateur Repeater Association Bruce Murray of Seal Beach and Jim Truran, KE6FNJ of Encino.

Thanks to everybody for their support. A reminder that Newsline is a 501c 3 and a California non-profit corporation; all contributions are tax-deductible. The address for the Newsline Support fund is PO Box 660937, Arcadia, CA

91066. I'm Andy Jarema, N6TCQ.

--

Thanks Andy. (N6TCQ)

**

RADIO BUSINESS: AEROFLEX BUYS IFR

If you use R-F test equipment to keep your repeater operating, listen up. According to Chris Boone, WB5ITT, Wichita Kansas based Aeroflex Inc. is acquiring IFR Systems Inc. – maker of the famed IFR Spectrum Analyzer and other R-F test gear. According to an April 15th press release, Aeroflex is paying approximately $60 million in cash for IFR. (WB5ITT)

**

HAMVENTION 2002: ARRL DIGITAL VOICE FORUM

The ARRL Digital Voice Working Group will host a Digital Voice Forum at the 2002 Dayton Hamvention. The session will include presentations from experts in the fields of digital-audio hardware, software and other technical details. Applications from rag-chewing to emergency communications to digital audio broadcasting will be covered. The date is Sunday, May 19th at 10:15 at the Hara Arena Meeting Room 1 immediately following the ARRL Forum. (ARRL)

**

INTERNATIONAL – UK: SPECIAL EVENT STATION GB2PK

On the international scene, word that United Kingdom special event station GB2PK will be on the air intermittently from the 26th of April for a month from the Porthcurno Telegraph Museum in Cornwall. The operation will use both vintage 1950’s military and modern ham radio gear. QSL as directed on the air. (GB2RS)

**

INTERNATIONAL – SOUTH KOREA: SPECIAL EVENT STATION HL17FCW

Also involved in a celebration HL17FWC. This station is on the air from South Korea to commemorate the 17th FIFA Football World Cup. QSL via HLZ0HQ. (GB2RS)

**

CONTESTS - WRTC 2002: UNITED ARAB EMIRATES TEAM INVITED TO 2002 EVENT

From the world of contesting, word that the WRTC 2002 Organizing Committee has decided to invite the A61AJ team from the United Arab Emirates to be the representative of the contesting community in the Middle East. According to a WRTC press release, the teams operating from A61AJ have achieved superb results over the past few years. WRTC planners say that this invitation seeks to recognize this fact. Team UAE will be led by Ali Al-Futtaim, A61AJ. Al-Futtaim is well known as the driving force behind the development of what is one of

the premier contest superstations in the Middle East and Asia. (WRTC)

**

DX

In D-X, Cuban VHF DX'er Arnie Coro, CO2KK says over the VHF Reflector that six meters is, properly named the magic band. According to Coro, while testing a balcony mounted half wave dipole he heard VK2ZF calling CQ on CW several times near 50.106 MHz. Coro says that the signal was good copy with no signs of echoes. Arnie responded but with only two watts and a dipole, no Q-S-O was made. Coro says that if he had been running at last 5 watts and a beam, that contact would have been made. (VHF Reflector)

**

THAT FINAL ITEM: AN EDITORIAL - WHERE HAVE ALL THE NOMINATIONS GONE?

And finally this week, an editorial word about the Amateur Radio Newsline Young Ham of the Year Award. Here is our producer Bill Pasternak, WA6ITF:

--
Im going to start this commentary with one word: Help!

Why help? Well its now the end of April. The nominating period for the 2002 Amateur Radio Newsline Young Ham of the Year Award has been open since February 1st. We have announced it at the end of every newscast for almost three months. Sadly, to date, we have not received what we consider to be a single viable nomination. Not one!

Normally by now we have received at least a dozen or more nominations. As this is written, all we have are the usual letters asking that we enter a youngster in a contest that some think the award to be. To paraphrase one: "Our 5 year old just got her ham license so send a free radio."

But that is it! And for the record; the Young Ham of the Year Award is not a contest. Rather its a way to honor the accomplishments of youth in ham radio. It has been that -- and only that -- since 1986.

The nominating period for this years award closes on May 30th. Just about 4 weeks from now. As it stands, there may be no Young Ham of the Year Award presented in 2002 unless we begin to receive valid nominations. And that is where you come in.

Do you know of a young ham -- age 18 or younger? One who has accomplished something really special using Amateur Radio? Well, what are you waiting for? Now is the time to nominate that person.

Does your radio club have a youngster who has been an outstanding member. Maybe one who does far more for the club that most of the grown-up hams? Again, what are you waiting for? This very moment is the time nominate that boy or girl.

How about that quiet young ham who is always willing to volunteer in public service events? You know; the one who does everything from organizing the

communications to keeping the club repeater operating. Ill say it once again: What are you waiting for? Nominate that person.

I think you get the idea.

OK. How do you file a nomination? Simple. You go to www.arnewsline.org, scroll down to Young Ham of the Year Award. Click on the rules. Read them. Click on the nominating form. Download it. Fill it out and mail it in or e-mail it to us. Its that easy.

We at the Amateur Radio Newsline™ believe that the future of our hobby, our service and our nation is in the hands of the young. It will be the next generation of young hams who will be the technologists, public service leaders and political leaders of this new millennium. The Young Ham of the Year Award is one way to guarantee that there will be this “next generation” of ham radio leaders. By taking the time to nominate a youngster for this award, you take one step to help insure the future of Amateur Radio.

Thank you. Roy.

--

If the award is made this year, the youngster selected will receive a trip to the Huntsville Hamfest and a ham radio gift courtesy of Vertex Standard. He or she will also be treated to a week at Spacecamp Huntsville thanks to the folks at C-Q magazine. (ARNewsline™)

In the Matter of)
)
Amendment of Part 97 of the Commission's) RM-10413
Amateur Service Rules Governing)
Operating Privileges)
)

PERSONAL COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments are in response to the ARRL proposal for "refarming"
the existing HF "Novice sub-bands".

I. Discussion:

The ARRL petition does not address the implementation of
new technologies as repeatedly requested by the Commission in
WT Docket 98-143. It simply proposes to eliminate the Novice
segments and reshuffle that spectrum among existing legacy
modes. Rather than gain consensus, the ARRL polling method
produced a popularity poll among several non-responsive (to
98-143) choices.

Rather than just "more of the same old stuff", I propose
that the Commission take this opportunity to provide the
Amateur Radio service with a new incentive to concentrate

on paragraph 97.1(b) of the Commission's Rules.

97.1(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.

While I agree that the declining Novice license population no longer justifies several significant chunks of spectrum as a "reservation" for improving their Morse skills, and that these "reservations" have outlived their regulatory purpose, I propose that we retain these 50-year old "reservations" and convert them to a new purpose which will ensure the future Amateur Radio service continues our "proven ability to contribute to the advancement".

II Proposal:

A. To "de-populate" the current Novice segments, I propose that all Novice (and Technician with code credit) licensees be authorized to use Morse code in the same band segments now authorized for General class licensees.

B. I propose that the current Novice sub-bands be set aside as a new "Experimental Reservation" for non-traditional and experimental modes such as digitized voice, digitized image, and other "forward looking" communications methods.

Traditional modulation methods would be allowed in these segments only for brief coordination discussion during the testing of an experimental mode.

C. I propose that the normal power output level of 1500W be allowed for those segments, but transmitters which are adjusted and capable of more than 50W must include auto-adaptive circuitry to reduce power to the minimum level needed to maintain reliable communications.

D. I recommend that the Commission grant broad discretion to amateurs operating in this "experimental reservation" as to innovative modulation schemes and non-traditional technologies.

Respectfully submitted,

Hans Brakob, K0HB

>can't be bothered to learn a second mode of electronic communication.

What do you mean by "second mode?" :-)

You simply hate voice modes, relegate them to "second place."

They are FIRST modes on HF, VHF, UHF ham bands.

>>We all know you are one of the best 1930s radio amateurs to
>>exist in the year 2002...except you seem to be a total technical
>>moron on how anything but on-off keying works.
>
>Well, compared to a professional electronics weenie like yourself,
>I *would* be a "technical moron" -- or at least, in the interest of the
>health of our electronics industry, I would hope I would be!

You are NO judge of technical things, Roll. You cannot compare professional electronics to amateur things because you have only a cursory knowledge. If put behind the front panel of your ready-built radio equipment you would be totally LOST.

>I have
>never made dime number one with my electronics knowledge, and
>you have made your living at it!

That is the basic definition of "amateur" versus "professional."

What other obvious things are you going to state?

>There had damn well BETTER be
>a world of difference between MY technical expertise and YOURS.
>However, I am a licensed AMATEUR radio operator.

Yes, you have a federal merit badge that signifies you can transmit RF energy within certain specified frequency limits using certain specified modulation modes. You bought all

your radio equipment ready-made and (apparently) were able
to read enough of the instruction manuals to make the
equipment work.

A little old lady neighbor (who knows nothing about electronics
or computers) recently bought a whole personal computer
setup and got it to work by doing the same thing...but did not
need any license or morse code ability. She doesn't brag
about her accomplishments and doesn't hold herself up as the
very model of a modern computer maven. You hold yourself up
as the shining example of an extra special amateur radio
operator.

>This newsgroup is about AMATEUR radio.

It is just about amateur radio policy, Roll, and filled with some
individuals who hold themselves in very high personal esteem
(their steem pressure is near explosive point) as models of
what other radio amateurs should be.

>Do YOU have an amateur radio license? No, you don't!

I have a commercial radio operator's license. Since 1956.
First class radiotelephone. One examination session.
No problem.

>With all your amazing technical knowledge, why the heck not?

Why should I dumb myself down to your level?

>Just going to a VE session and getting your No-Clue
>Tech ticket would almost remove this stigma from your persona on
>this newsgroup, and it would get Steve off you back as well!

There is no such thing as a "No-Clue Tech ticket."

Who is "Steve?"

If you mean Richard Chamberpot, amateur radio's counterpart to
Efrem Saldovar, he has a psychological aberration that makes
him want to beat up old men just for jollies. He's not rational.

Try to convince me that one of your merit badges is worthwhile
